Design Reuse – Problem Statement

Engineers spend a significant amount of redundant effort in the development of CAD models resulting in excessive costs and inefficient product development cycle

New parts ripple through the system, adding effort/cost in every lifecycle phase

- 2008 DoD “Parts Standardization and Management Committee” estimated cost >$27K per part (government programs)\(^1\)

- 2011 study by the Aberdeen Group (costs between $4.5K - $23K)\(^2\)

Designers and Engineers have a hard time finding the correct mechanical CAD model to use in their design

Teamcenter Part Search, Selection and Insertion

Mission

- Increase the use of standard parts from the approved Standard Parts List (SPL) and promote reuse of existing NGC design, by providing a capability to perform part search, selection and insertion, in the design environment, directly at the designer/engineer’s “fingertips”.

Scope

- Implement a technology based on Teamcenter / aClass / Geolus to perform part search, selection and insertion (when possible), integrated with the Mechanical and Electrical (future) Computer Aided Design (CAD) tools, in the NGC(ES) Teamcenter environment.
Overview: Standard Parts – Request, Search and Selection Data Flow

- **Components Engineer**
  - Teamcenter
  - aClass

- **DMS (ECAD)**
  - Model Available
  - Parametric Data (future)

- **ISE Source**
- **Internal Source**
- **External Source**

- **IHS**
  - Parametric Data, YTEOL, life cycle data

- **XSB**
  - Industry part data, parametric data

- **NPR**
  - NPR data for newly created parts

- **Data Warehouse**
  - PPSL/SPL, inventory data, Cost data

- **Geolus Database**

- **Components Engineer**
  - Web access for non-CAD users searching for standard parts

- **CAD Designer** End-user
  - Search, selection and insertion from within NX or Teamcenter

- **Non-CAD user**
  - Search, selection and insertion from within NX or Teamcenter
Components Engineer: Standard Parts Request

- **ISE Source**: Internal Source
- **External Source**: NPR

**Teamcenter aClass**

- **IHS**: Parametric Data, YTEOL, life cycle data
- **XSB**: Industry part data, parametric data
- **NPR**: NPR data for newly created parts
- **Data Warehouse**: PPSL/SPL, inventory data, Cost data

**User Request**

- **Part #**
- **Part Attribute Data (.csv)**
- **Comp. Engr Review Request**
- **Comp. Engr Review Attribute Data**
- **IcoSync Holding Area**
- **IcoSync Process**

**Decision**

- **NPR Approved and ACTIVE in ISE?**
  - **Yes** → **IcoSync Process** → **aClass**
  - **No** → **Comp. Engr Review** → **Comp. Engr Review Attribute Data** → **NPR** → **XSB** → **NPR** → **IcoSync Holding Area**
What is aClass

- A classification system for the structured storage and reuse of product data within Teamcenter

- A part selection tool used to perform Part Search Selection and Insertion of approved ES standard parts (Mechanical and Electrical) within the Teamcenter environment
  
  - Preform parametric (attribute based) searches
  
  - Access IHS specification data directly from the search results view
  
  - Can access NPR data in search results view.

  - Fully integrated with NX and allows NX users to search for standard parts from within the NX design environment and insert the 3D CAD model of the part directly into their assembly

  - Electrical parts can be accessed through DxDesigner/Expedition (future).
BCT aClass (Interface to Tc Classification)

- Access and management of classification data
- Search / display the classification hierarchy
- Add classification objects (ICOs) to the classification hierarchy
- Create and modify attribute values
# Accessing aClass - 3 User Interfaces:

<table>
<thead>

</tbody>
</table>
Benefits of aClass

- Provides users with the capability to search and select approved standard parts by the part number or by using a parametric based search (part attributes), without leaving their design environment.
  - Fully integrated with the Teamcenter in the OneVault environment
  - Fully integrated with NX mechanical design environment
- Contains data for over 400,000 parts (Electrical and Mechanical) available for reuse in ES designs.
- Quickly identifies Standard Parts List (SPL) items, which promotes design reuse and cost savings.
Promotes Reuse of SPL parts

Select part in table to view related documents

ES New Part Request (NPR)

IHS online documentation
NX Designer Interaction

- Search and Navigate Part Data
- Part Evaluation and Comparison
- Insertion of CAD Model in Open Session (Multi-Cad Support)
- Access to Associated Data (Specs, Notes, etc)
- New Part Request
DMS Library Researcher - Show the ECAD geometry view
What is 3D Shape Search

- Tool for searching for existing parts and designs based on geometry
  - Searches for similar solids in Geolus database
  - Database is created from Item Revision Attribute data and JT files stored in Teamcenter
- Accessed/Used from:
  - NX
  - aClass
  - Teamcenter Rich Client
  - Web interface (Coming soon. Requires separate login account)
The Geolus Database

Initial Population (Geolus Teamcenter Indexer)

- Initial mode – queries Teamcenter server
  - Generate list of Item Revisions matching the given criteria
  - Extract JT and PLMXML file
  - Convert JT and PLMXML file to Geolus XML files
  - Upload to Geolus Server

Updates

- Based on JT (Direct Model) created in Teamcenter by:
  - Nightly batch process that creates JT file for all NX piece part designs modified during the day (no Assembly JT)
  - NX Save when “Save JT” option is turned ON
- Nightly - Geolus “indexing” process creates “fingerprint” of the geometry and metadata from Teamcenter
- Generation of Smart Thumbnails

ISO  LEFT  BOTTOM
Use Cases of Shape Search

• Design phase:
  • Search for similar parts to use as “start parts”
  • Search for similar parts to use in assembly

• Analysis phase:
  • Search for similar parts for similar analysis methodology

• Manufacturing and NC Programming
  • Reuse of NC tool path from similar parts
  • Reuse of tooling and fixtures
  • Promote group technology (similar geometry -> similar manufacturing process)
Search for similar parts to use as “start parts”

- Start with Quick Sketch of part
- Tools -> Shape Search...
- Right-Click thumbnail of chosen part to display action menu

Start with Quick Sketch of part
Tools -> Shape Search...
Right-Click thumbnail of chosen part to display action menu
Geolus - Similar Parts

Start with Attribute Search – 120 Results

Run Geometry Search – 16 Results
Geolus – Duplicate Parts

Global Product Data Interoperability Summit | 2015
Benefits of 3D Shape Search

- Promotes reuse of NGC Designs

- Promotes reuse of existing standard parts

- Saves design cycle time by finding existing parts with similar geometry that can be modified for reuse

- No need to know part numbers to find existing designs/parts
  - Company acquisitions (legacy PDM, nomenclature)
  - Programs using different naming conventions

- Eliminate time and expense related to the redesign or purchasing of duplicate parts.

- Find similar NGC Designs for Classification

Geolus Teamcenter Indexer

Run-mode 3: Export, Index, and import to DB

Geolus Web Services

Geolus Application Server

Database Server

Geolus Database

Nightly Scheduled Task
- Logs into Teamcenter
- Queries IR’s (last modified - past 24hrs)
  - Request JT file
  - Request PLMXML
- Geolus Indexer runs on each batch of 100 JT/PLMXML
  - Writes Geolus XML
- Upload batch of 100 Geolus XML files – write IR data to database
