Louis Pascarella *Chief Technology Officer, HCL Geometric PLM*

Global Product Data Interoperability Summit | 2017

Louis Pascarella is CTO of HCL's Geometric PLM organization focused on Product Creation Methodologies, Product Lifecycle Management and Digitalization of Enterprise Ecosystems, including Digital Thread/Twin enablement.

He has been working with global Automotive, Aerospace and Software Vendors for over 35 years in the areas of Visualization, CAD, PLM and Software Lifecycle Management with a focus on strategy, planning, consulting, systems engineering, and knowledge capture & management.

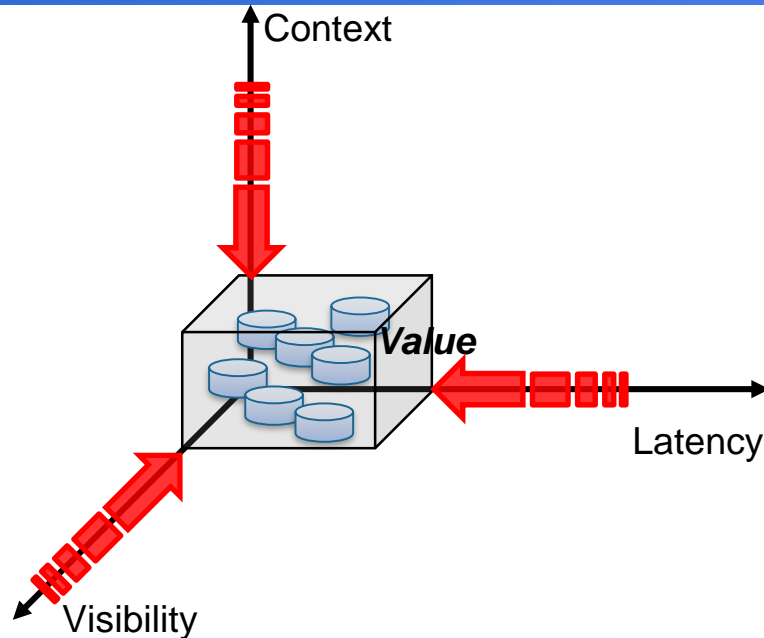

Mr. Pascarella has a leadership background (CTO, VP R&D) in PLM & Manufacturing technology development and implementation (Teamcenter, Windchill, & ENOVIA), solution architecture, enterprise middleware technologies (EAI, SOA), and Industrial Internet of Things (IIOT/IOT).

Currently, he is providing thought leadership and strategic guidance for large customer Digital transformation initiatives.

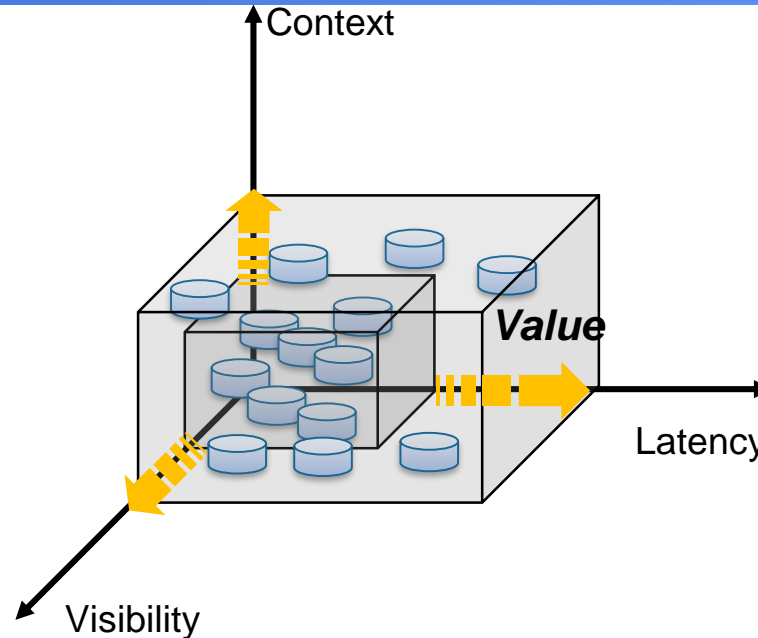

We Struggle to Improve the Value of our Digital Assets

Global Product Data Interoperability Summit | 2017

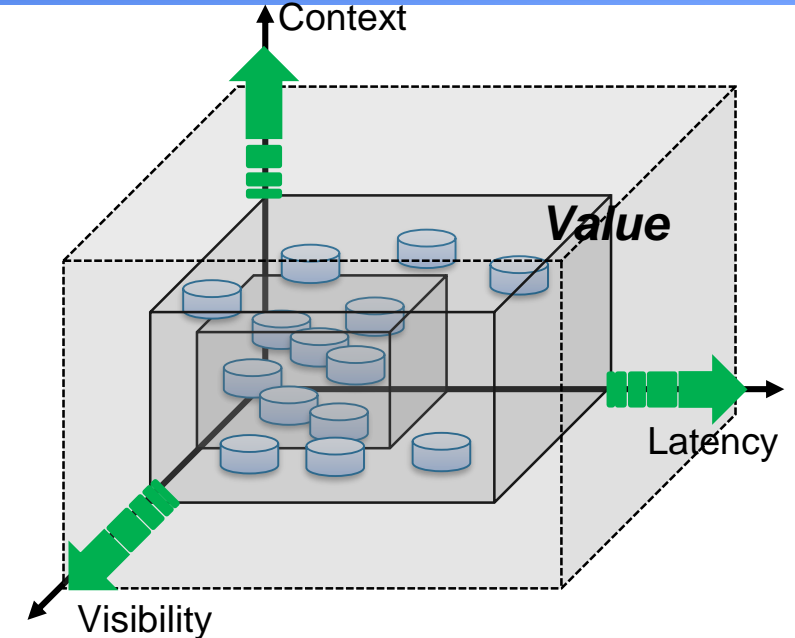

Data Authoring Focus

- “Data Authors” enabled with applications
- “Data Consumers” struggle with
 - Stale data → Latency
 - Why? → Context
 - Data access → Visibility

Enable Data Consumption

- “Data Consumers” enablement
- Application Integration
- EAI and Middleware
- Reporting and Dashboards
- Mixed Results
 - Latency Improved, but
 - Data Quality → Context
 - Integration Complexity → Visibility

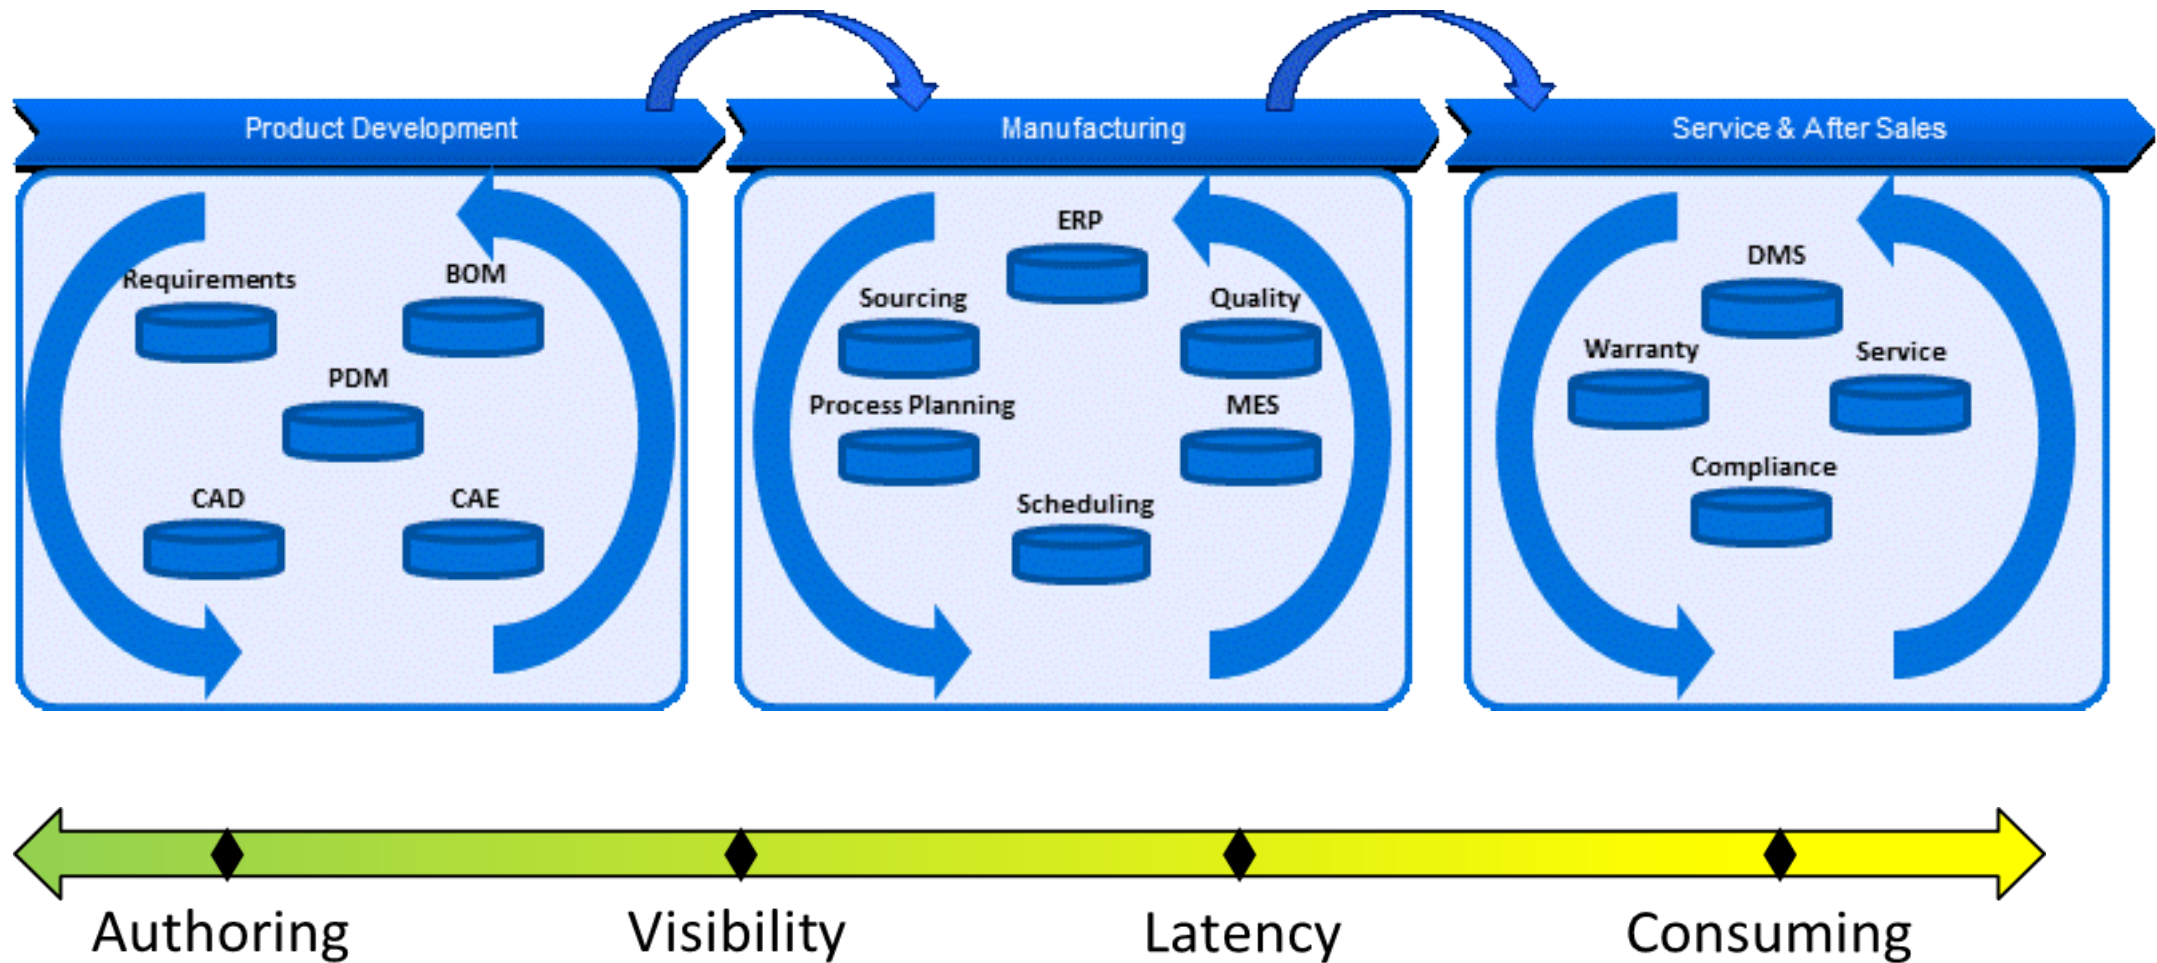

Data → Information → Knowledge

- Synthesize data to information
- Collection
- Aggregation
- Normalization
- Assign Context for global understanding
- Increase availability to ‘Consumers’
- Reduce latency
- Increase data transparency (visibility)

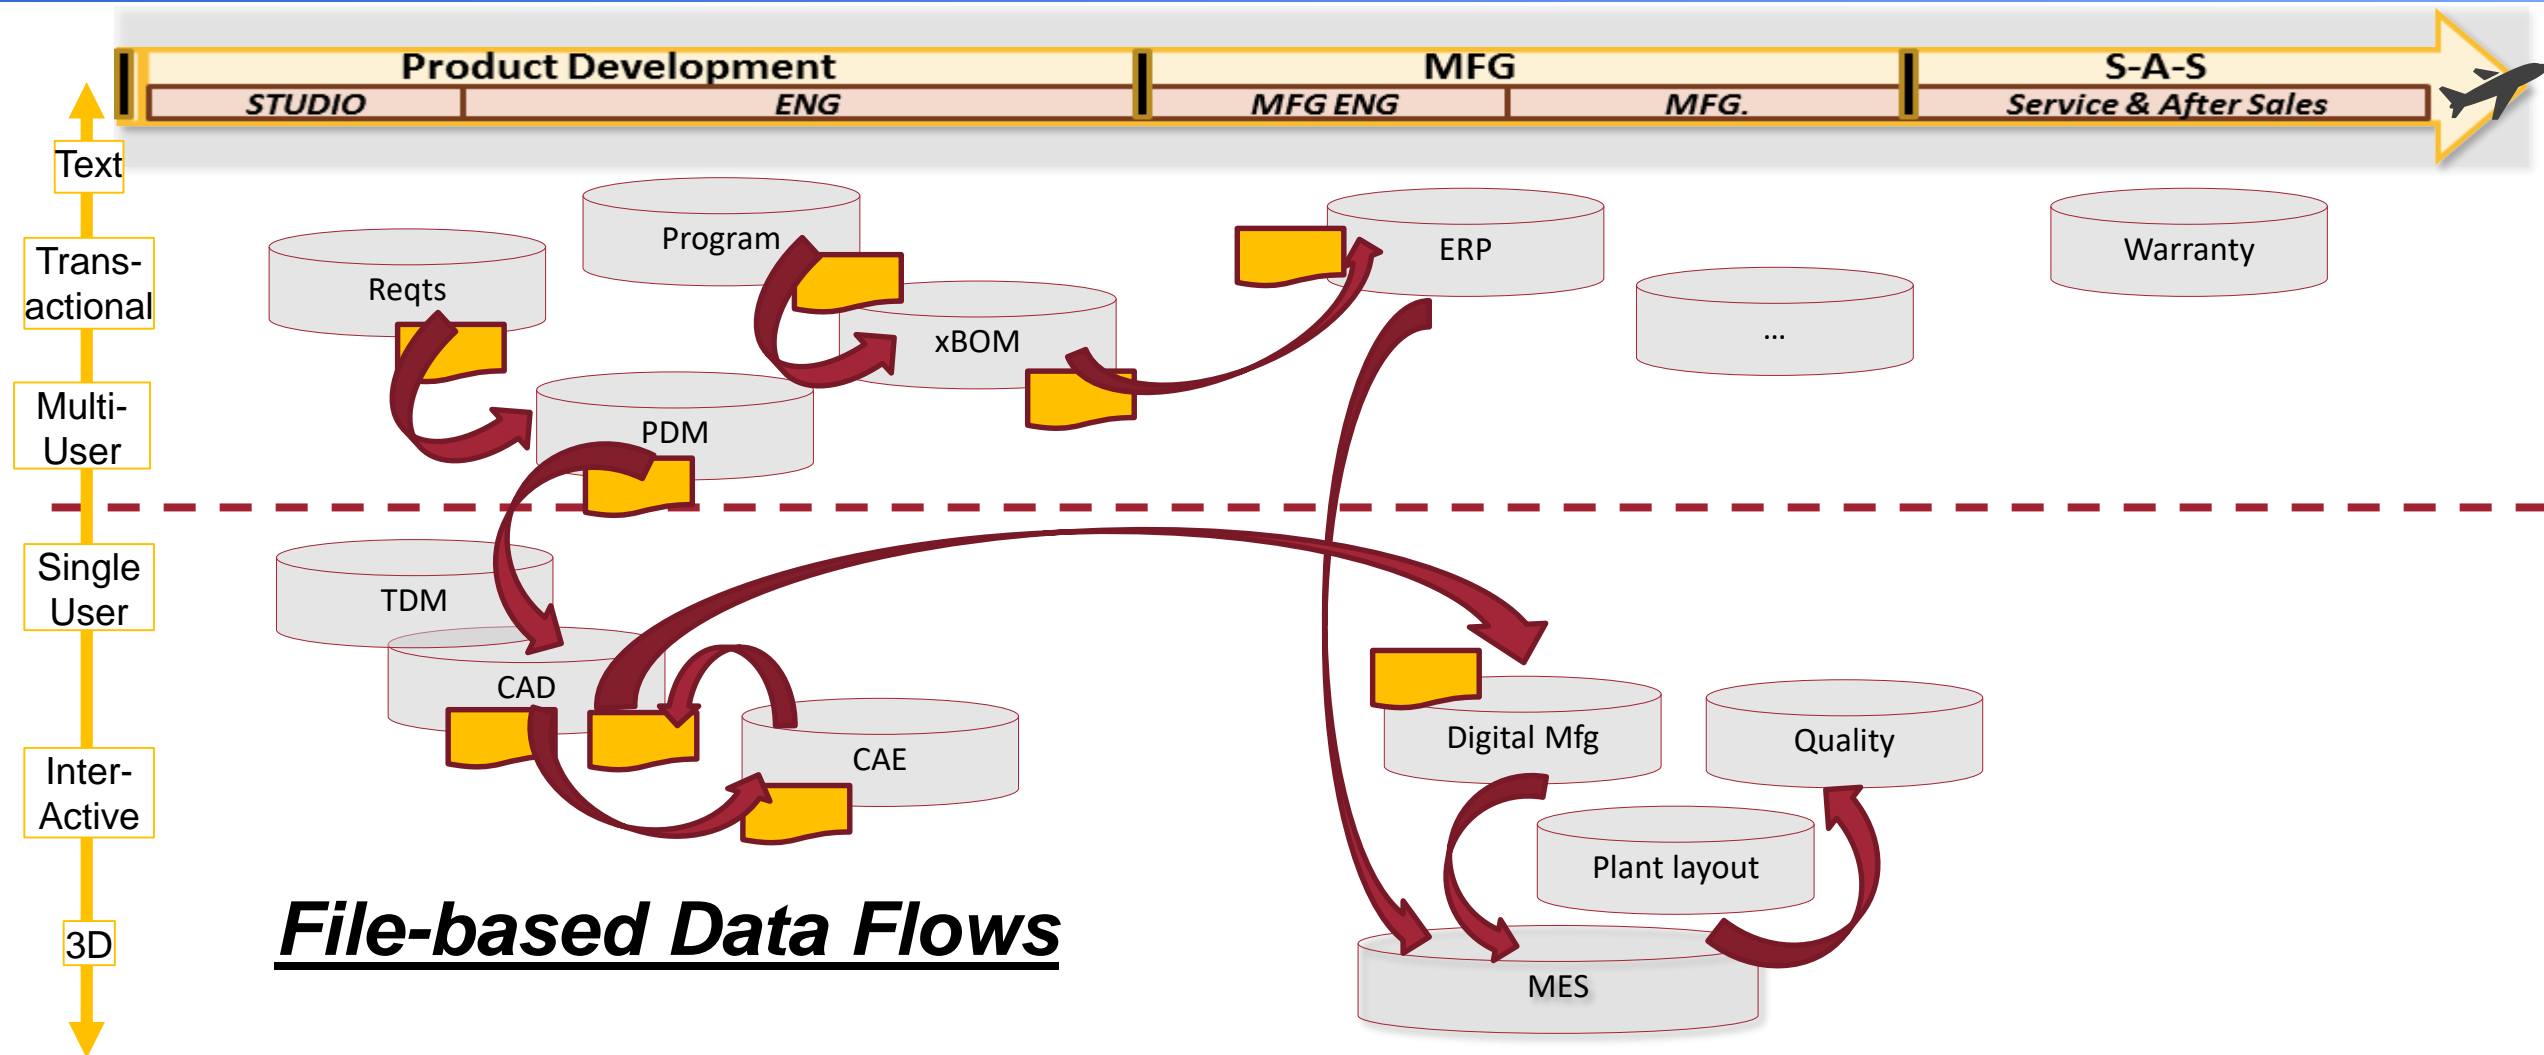

What We Built → An Application Footprint Focused on Authoring...

Global Product Data Interoperability Summit | 2017

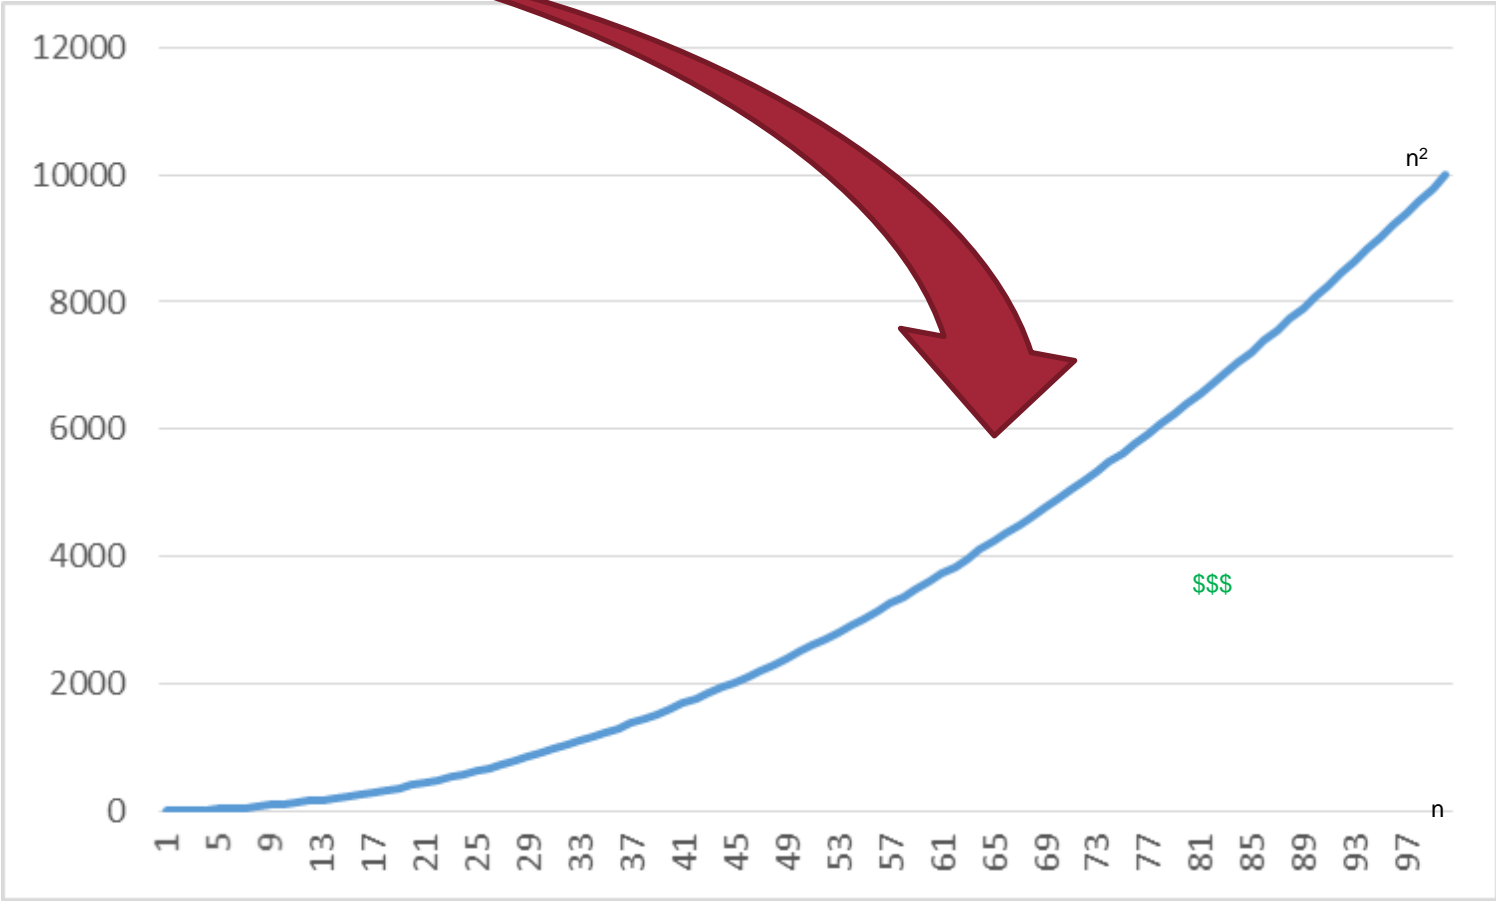

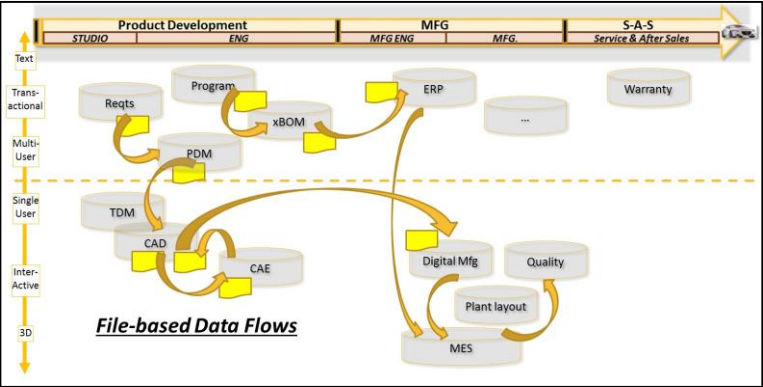

But We Tried to “Consume”... and Built Semantic based Point-Point Integrations

Global Product Data Interoperability Summit | 2017

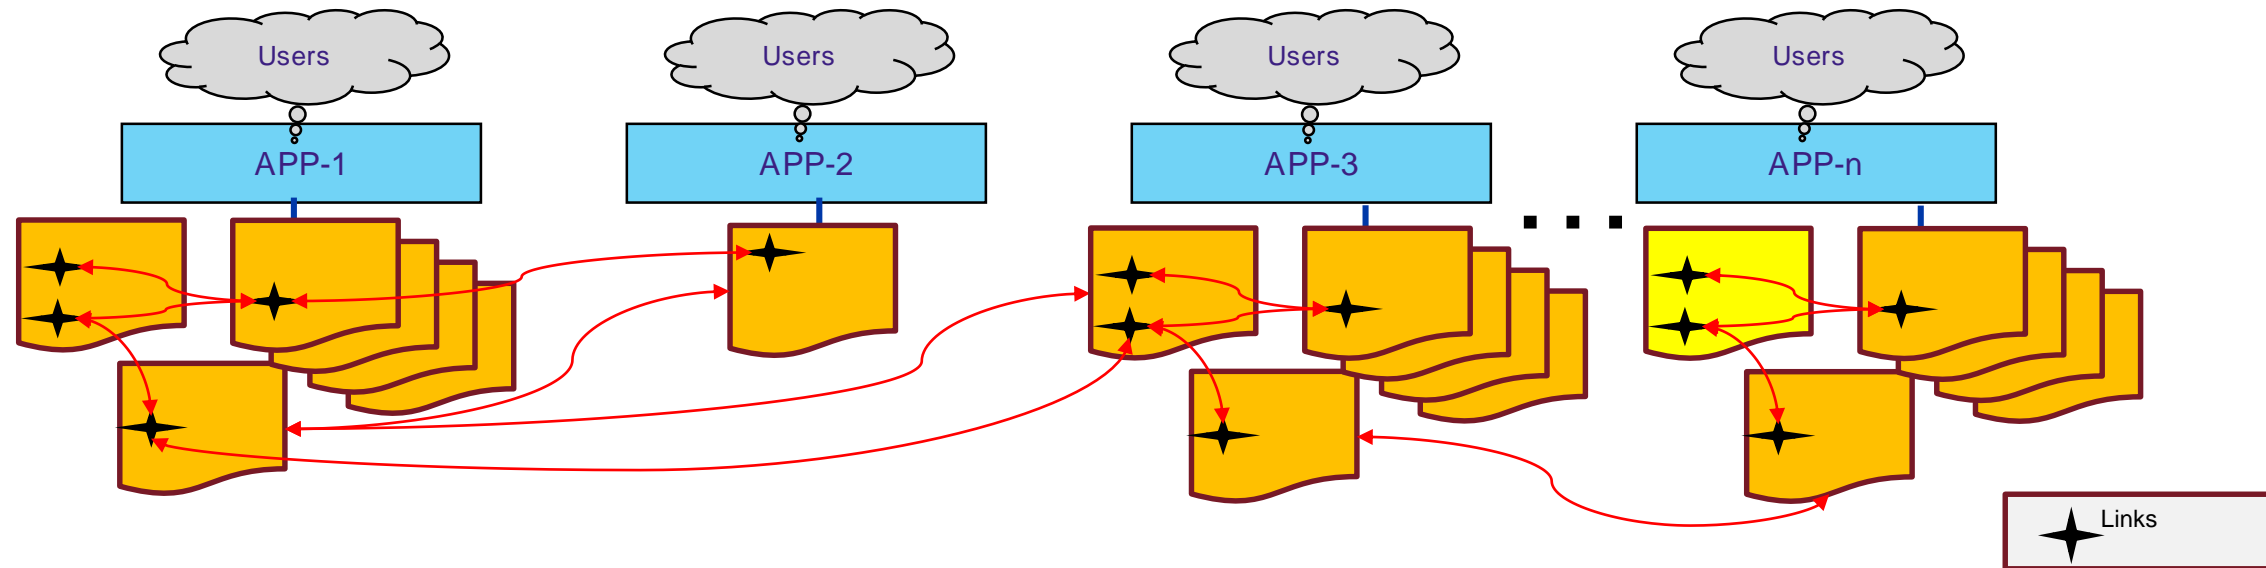

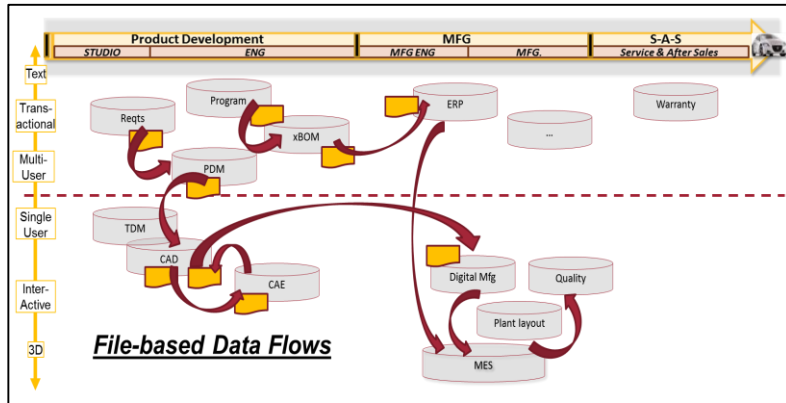

And Hit a Wall.... File-Based Links Scalability Barrier

Global Product Data Interoperability Summit | 2017

The Challenge is now greater : Inter-file & Intra-file attribute Linkage

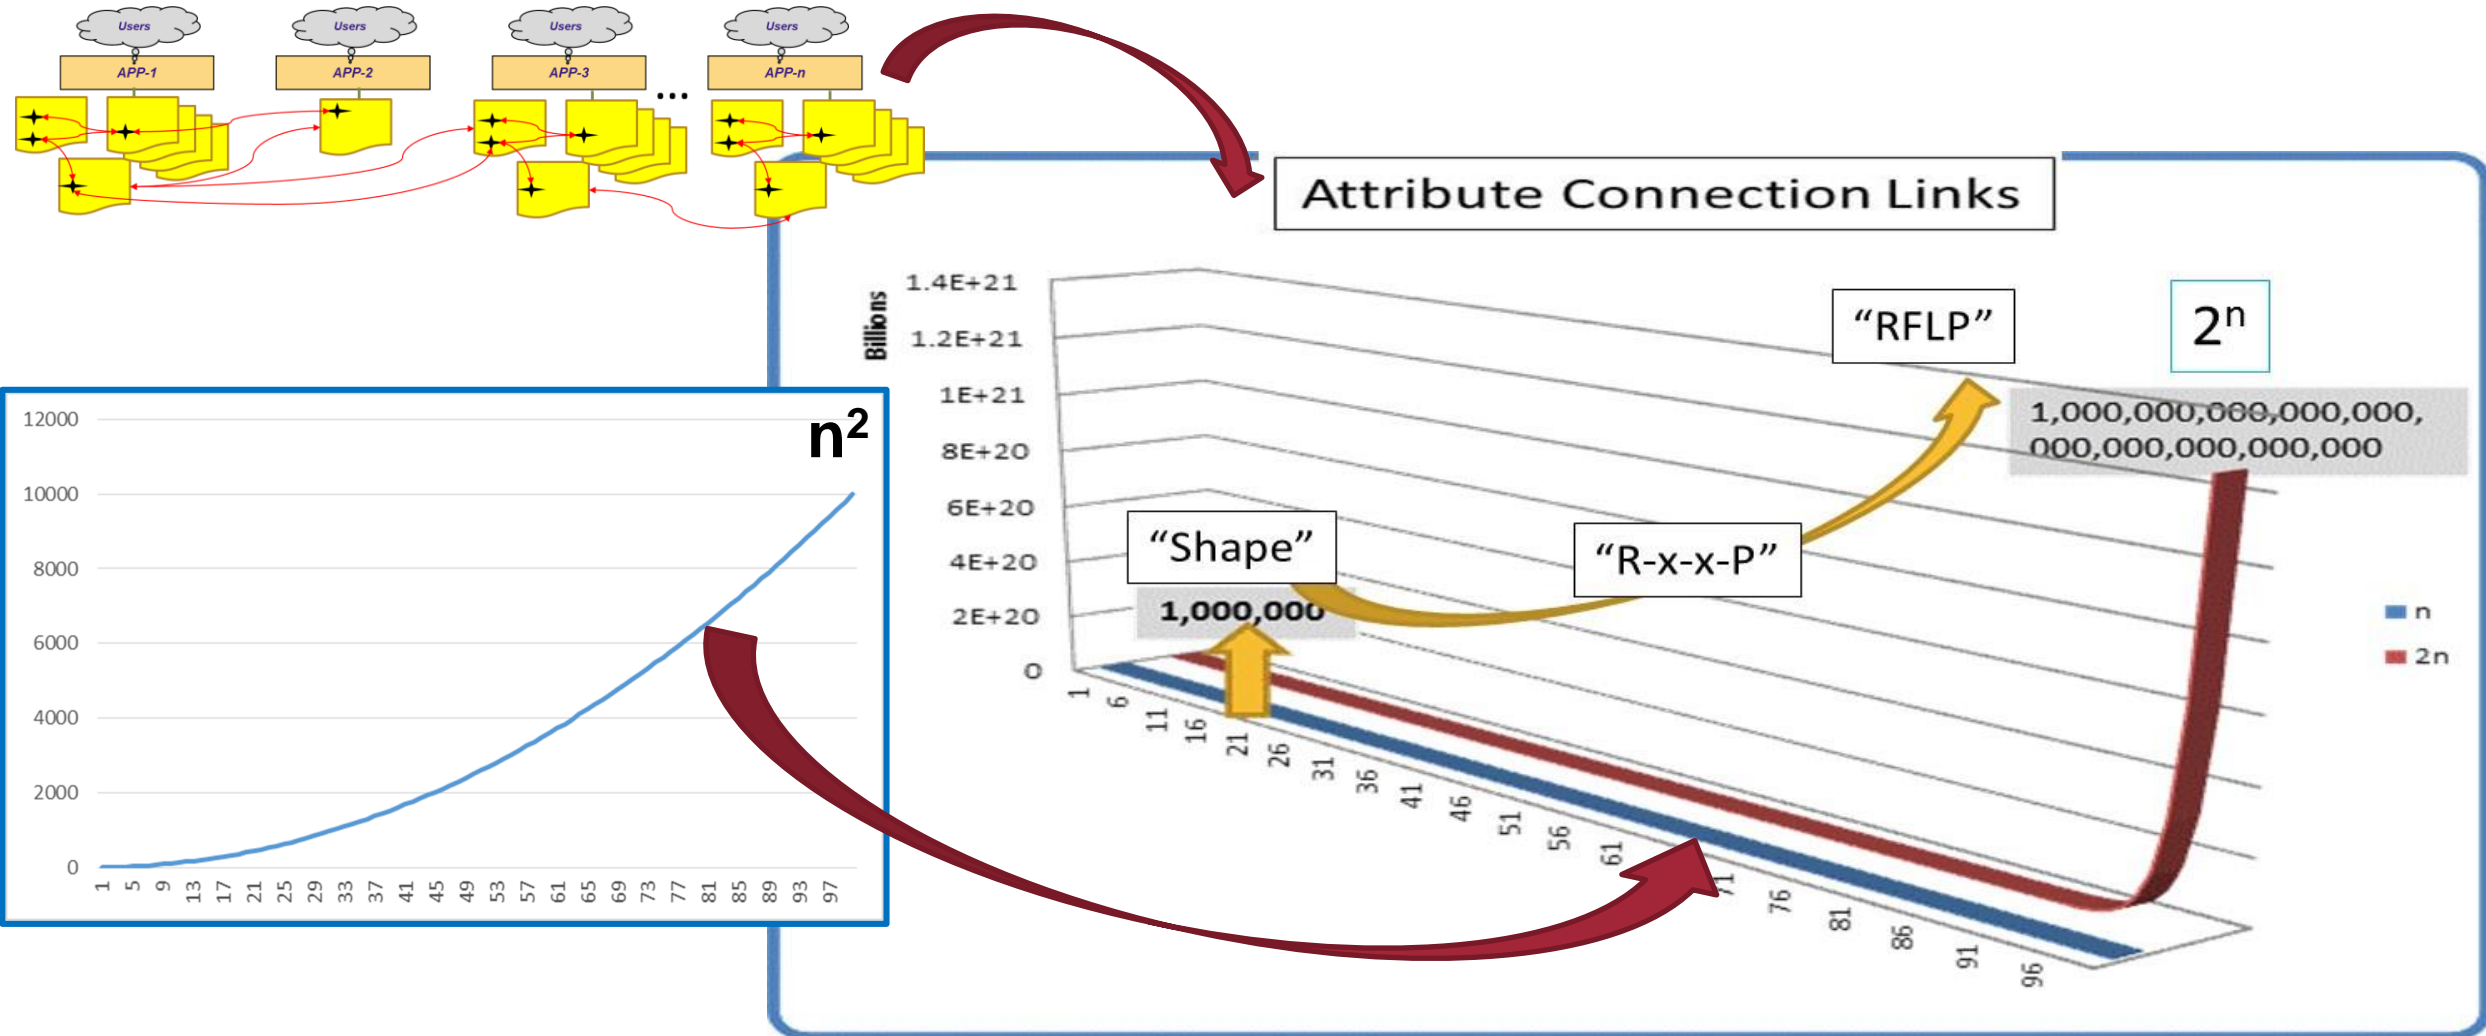

Global Product Data Interoperability Summit | 2017

And Now the Wall is Higher!!!! Barriers

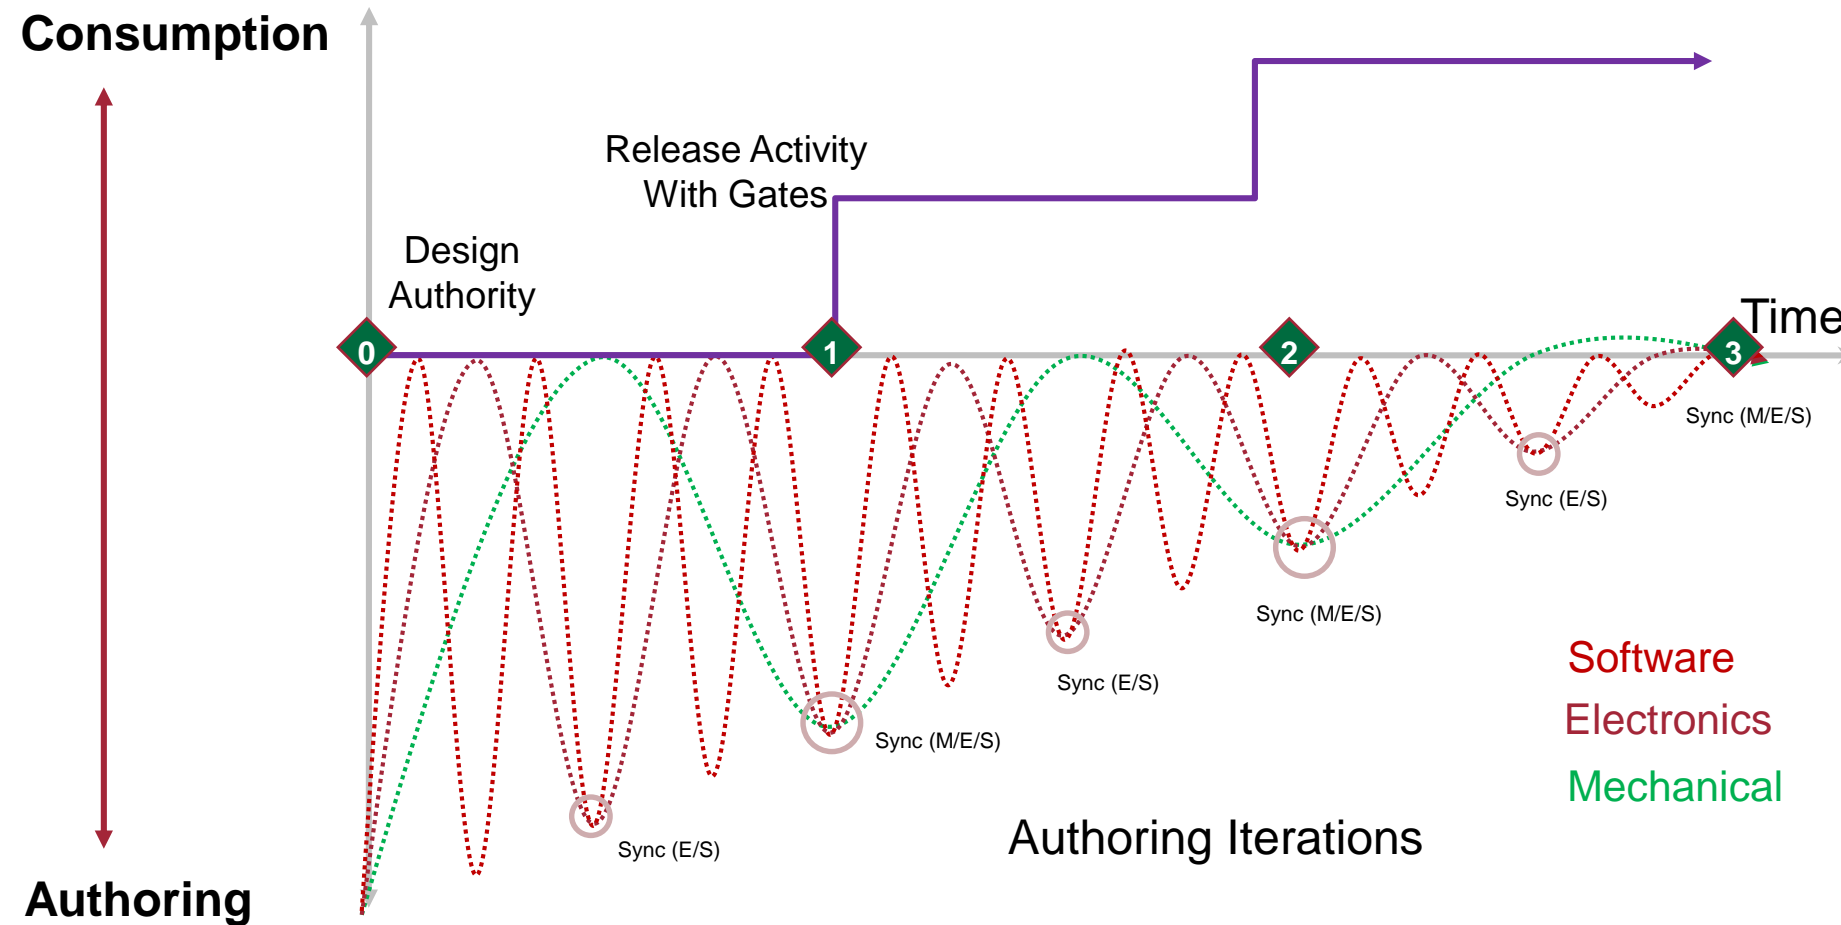

Global Product Data Interoperability Summit | 2017

Attribute Linkage & Traceability Scalability

Product Complexity - Authoring & Consumption

Global Product Data Interoperability Summit | 2017

Consumption

- Bills of Material (BOMs)
- Configuration Management
- Release Management
- Change Management
- Project Management
- Product & Portfolio Mgmt
- Cost, Compliance & Quality

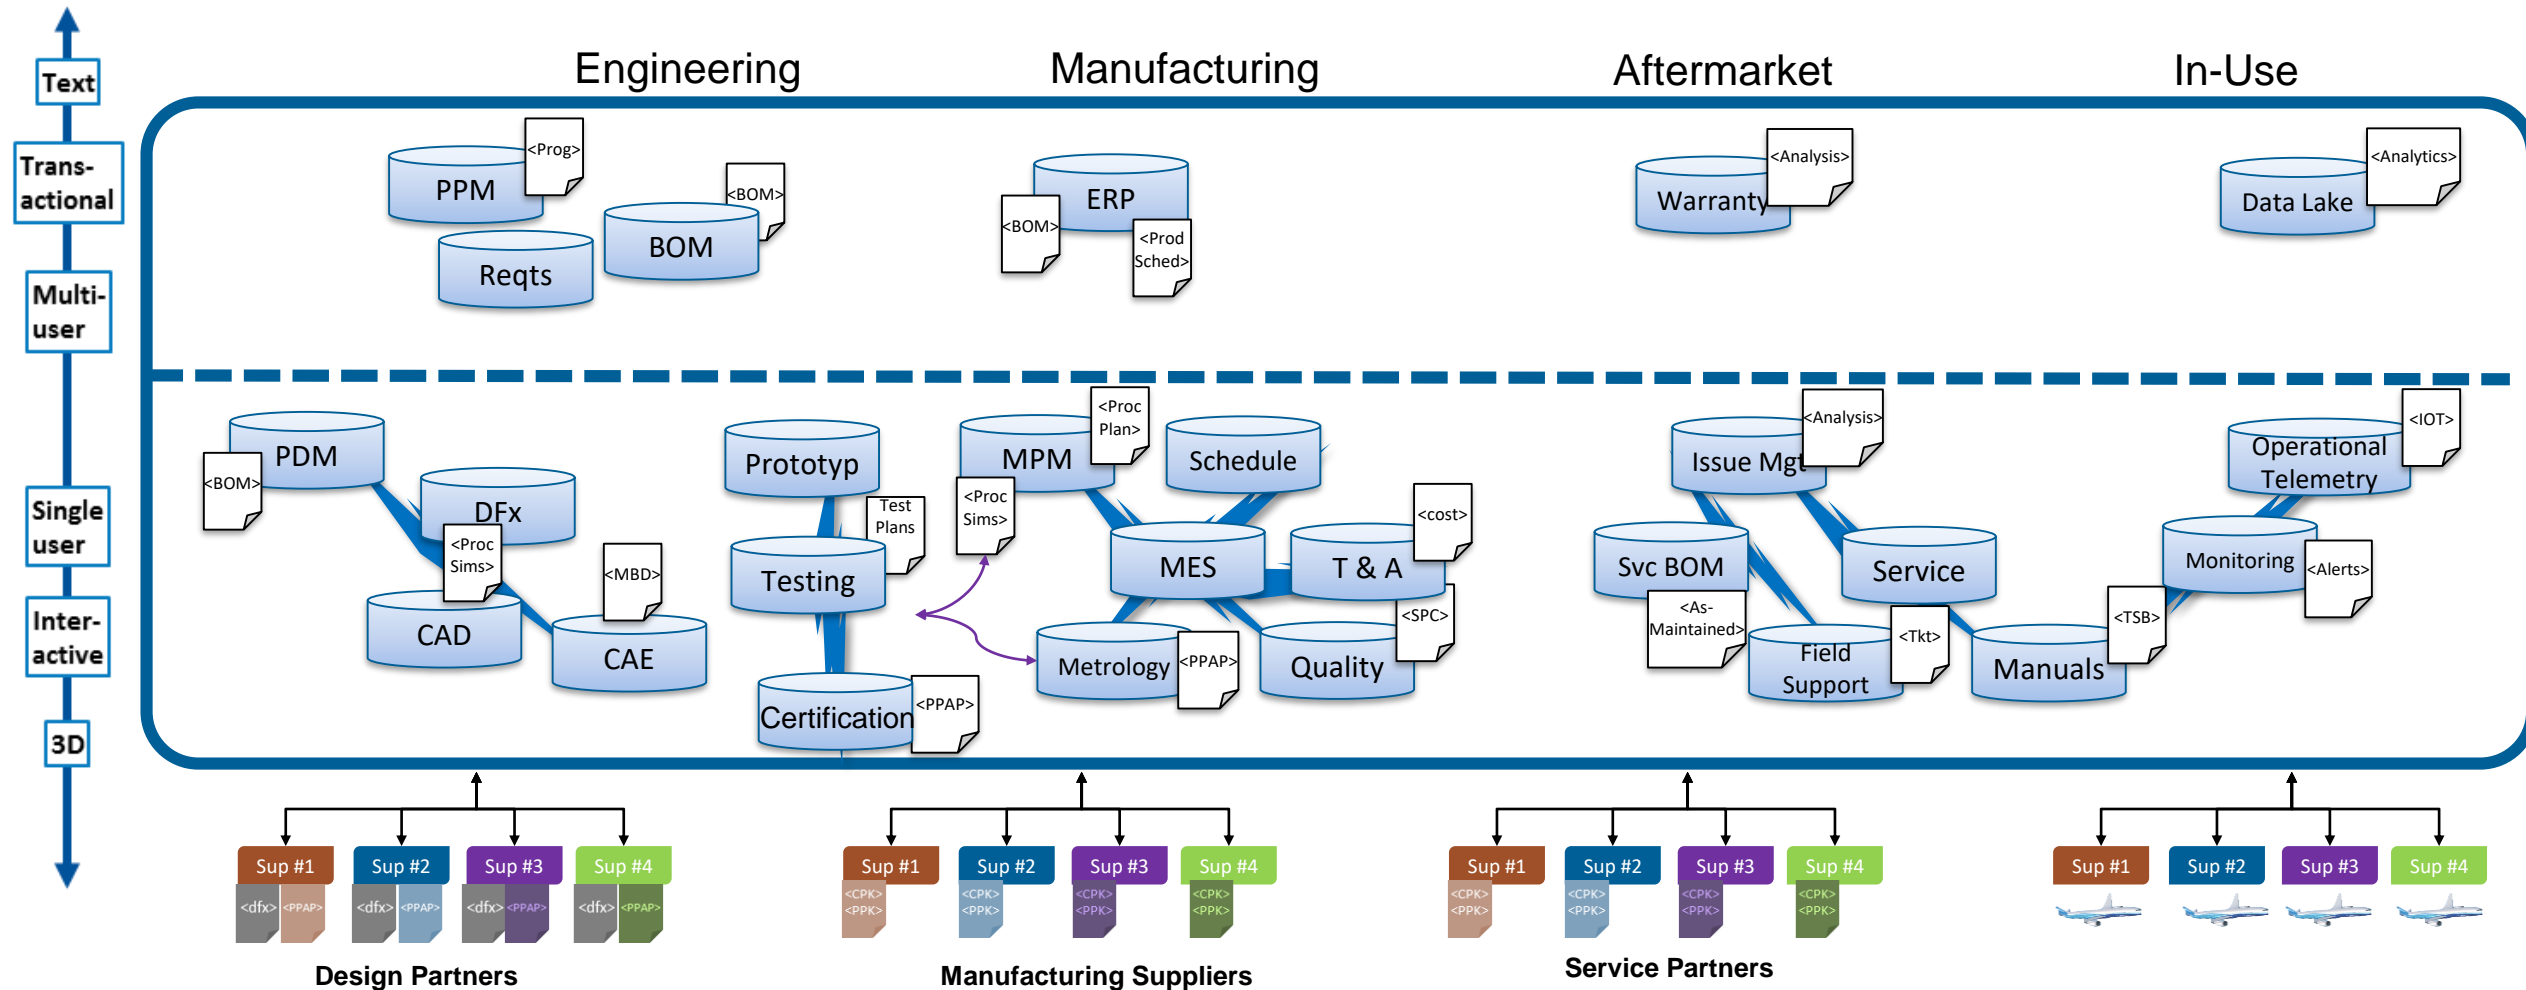

Authoring

- User Workspaces
- Team Collaboration
- Integration
- Simulation
- Verification & Validation
- Supplier Collaboration

Mechanical, Electronics and Software streams attain maturity in different cycles. Managing these streams individually is essential to retain their flexibility. However they need to be integrated horizontally and vertically (Enterprise systems) based on maturity of data.

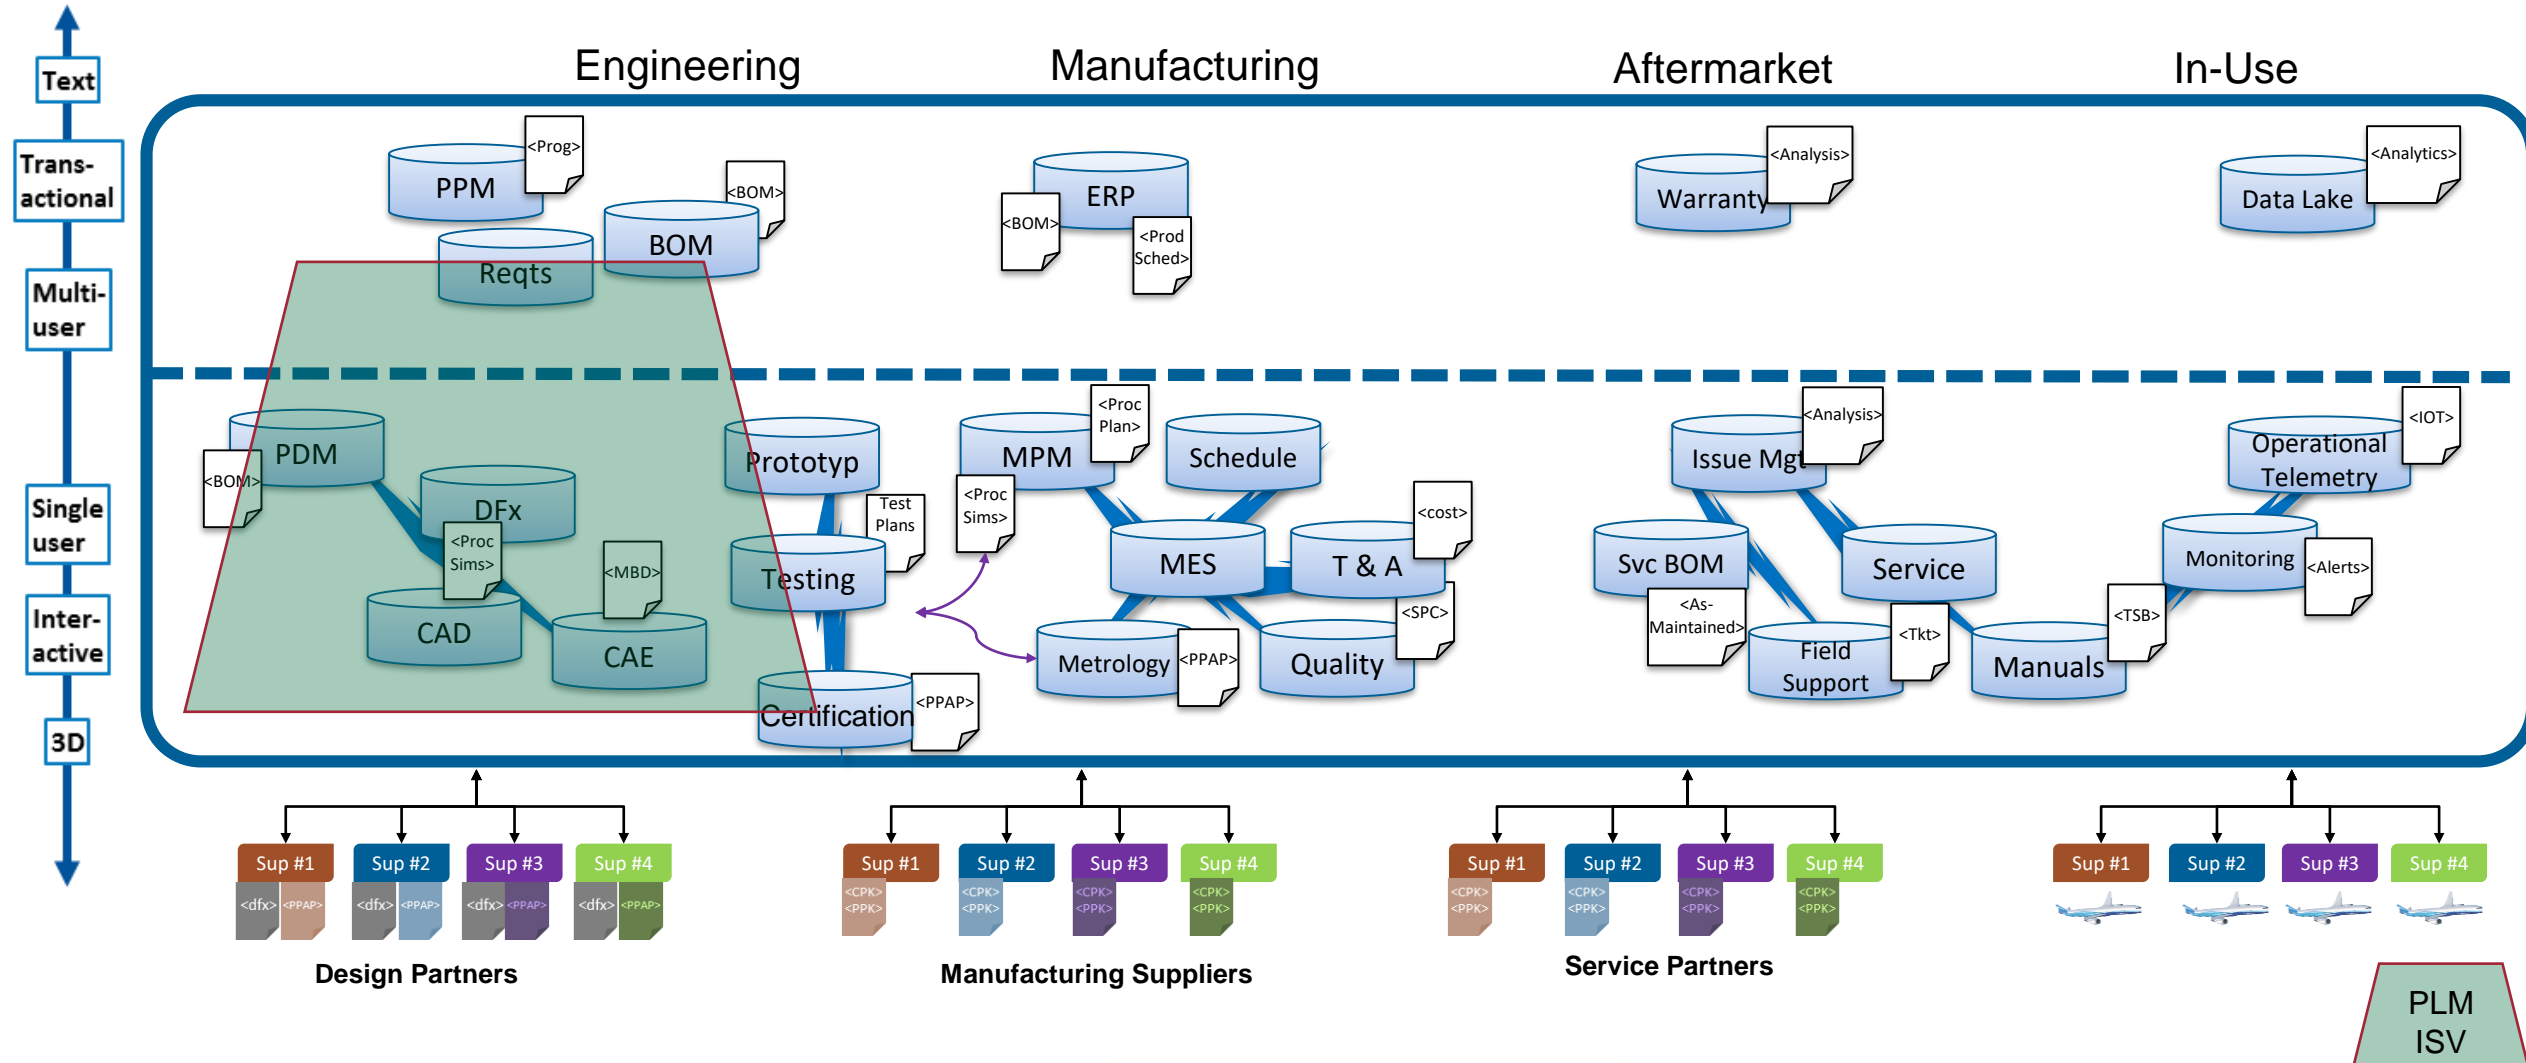

Corporate Ecosystem Application Footprint → Macro Semantic view

Global Product Data Interoperability Summit | 2017

Corporate Ecosystem Application Footprint → Macro Semantic view

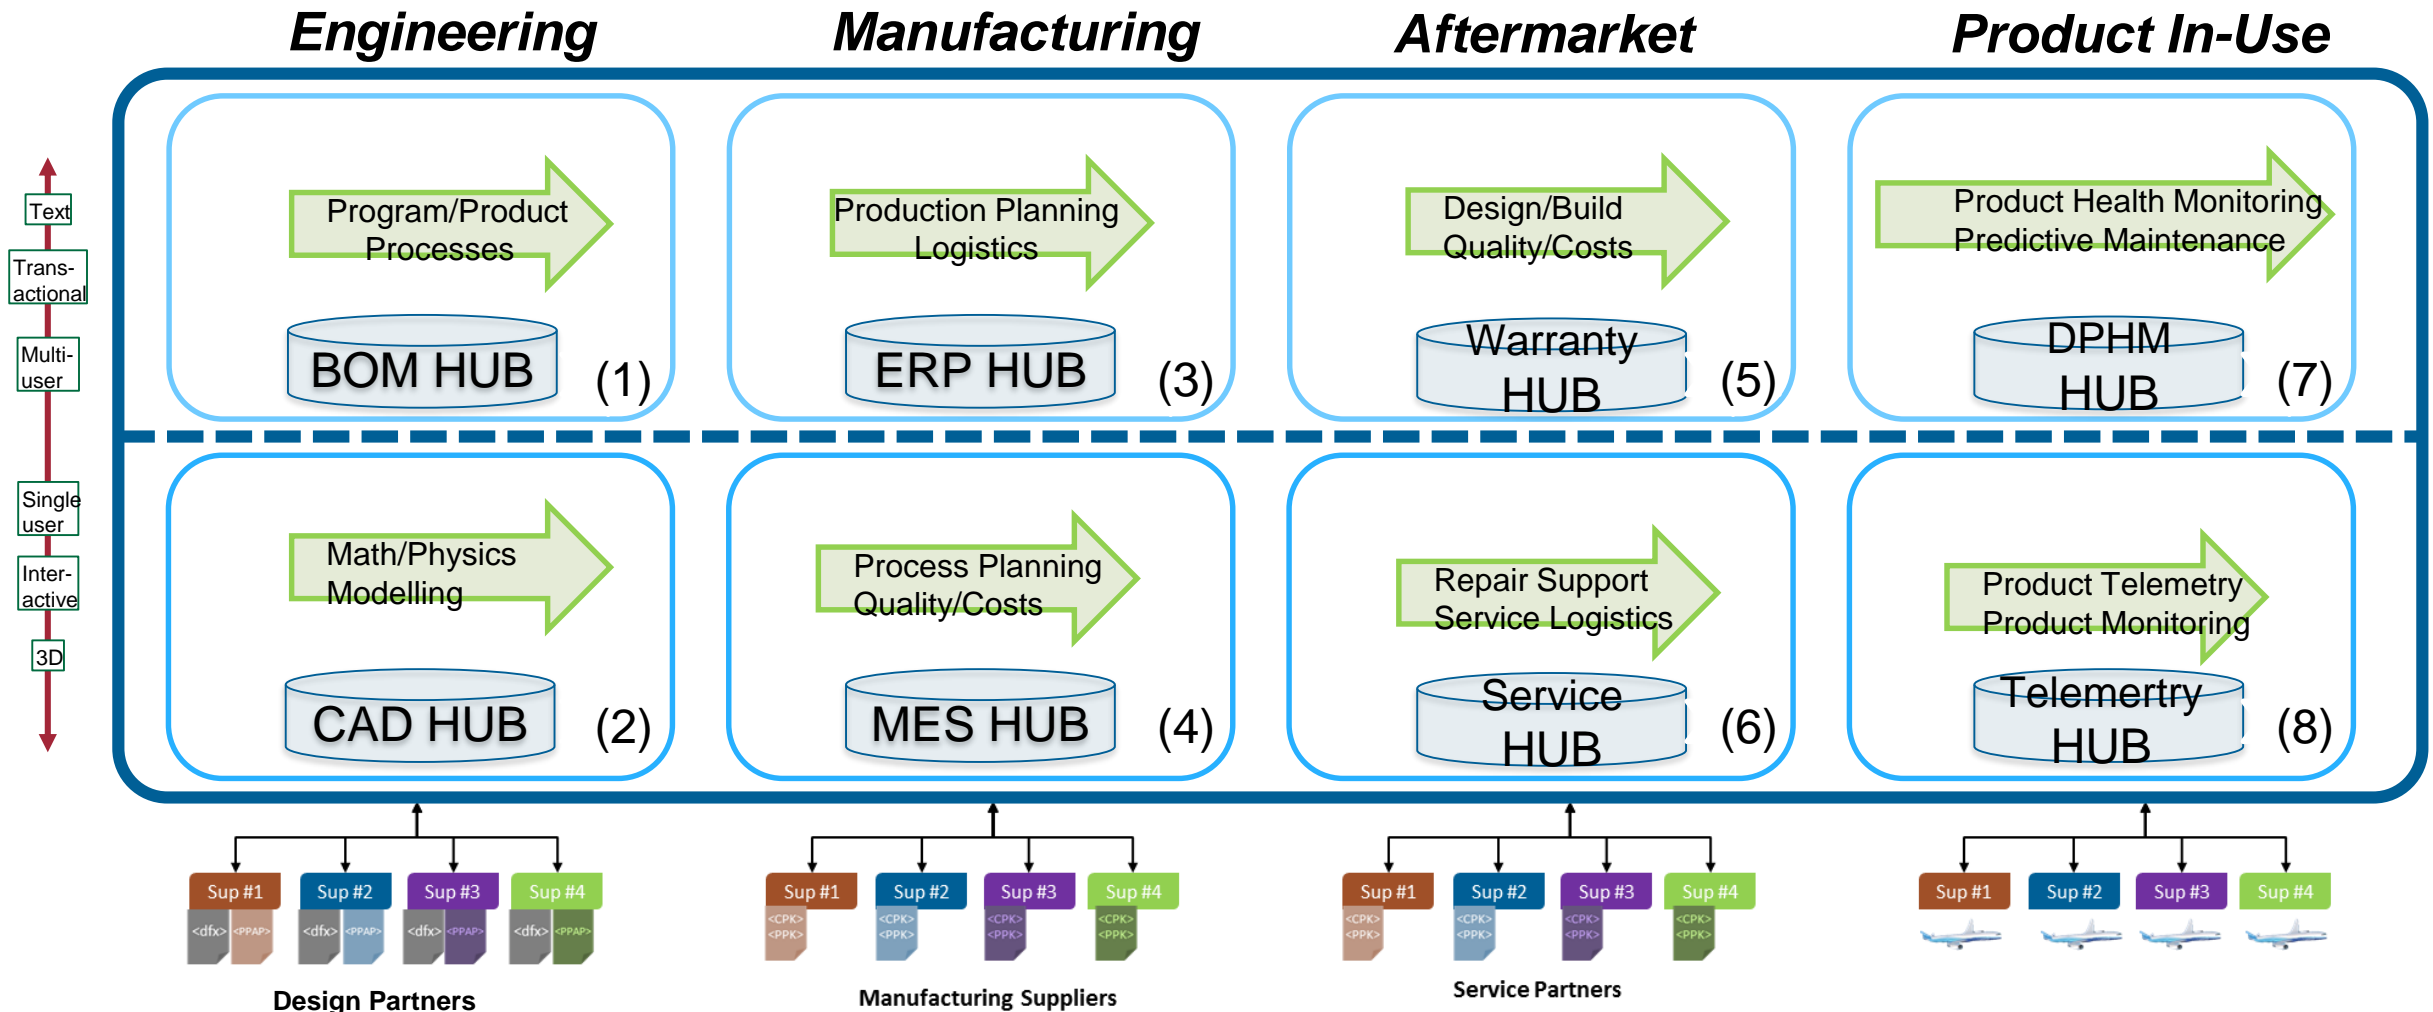

Global Product Data Interoperability Summit | 2017

Corporate Ecosystem application footprint → Micro Semantic view

2/2

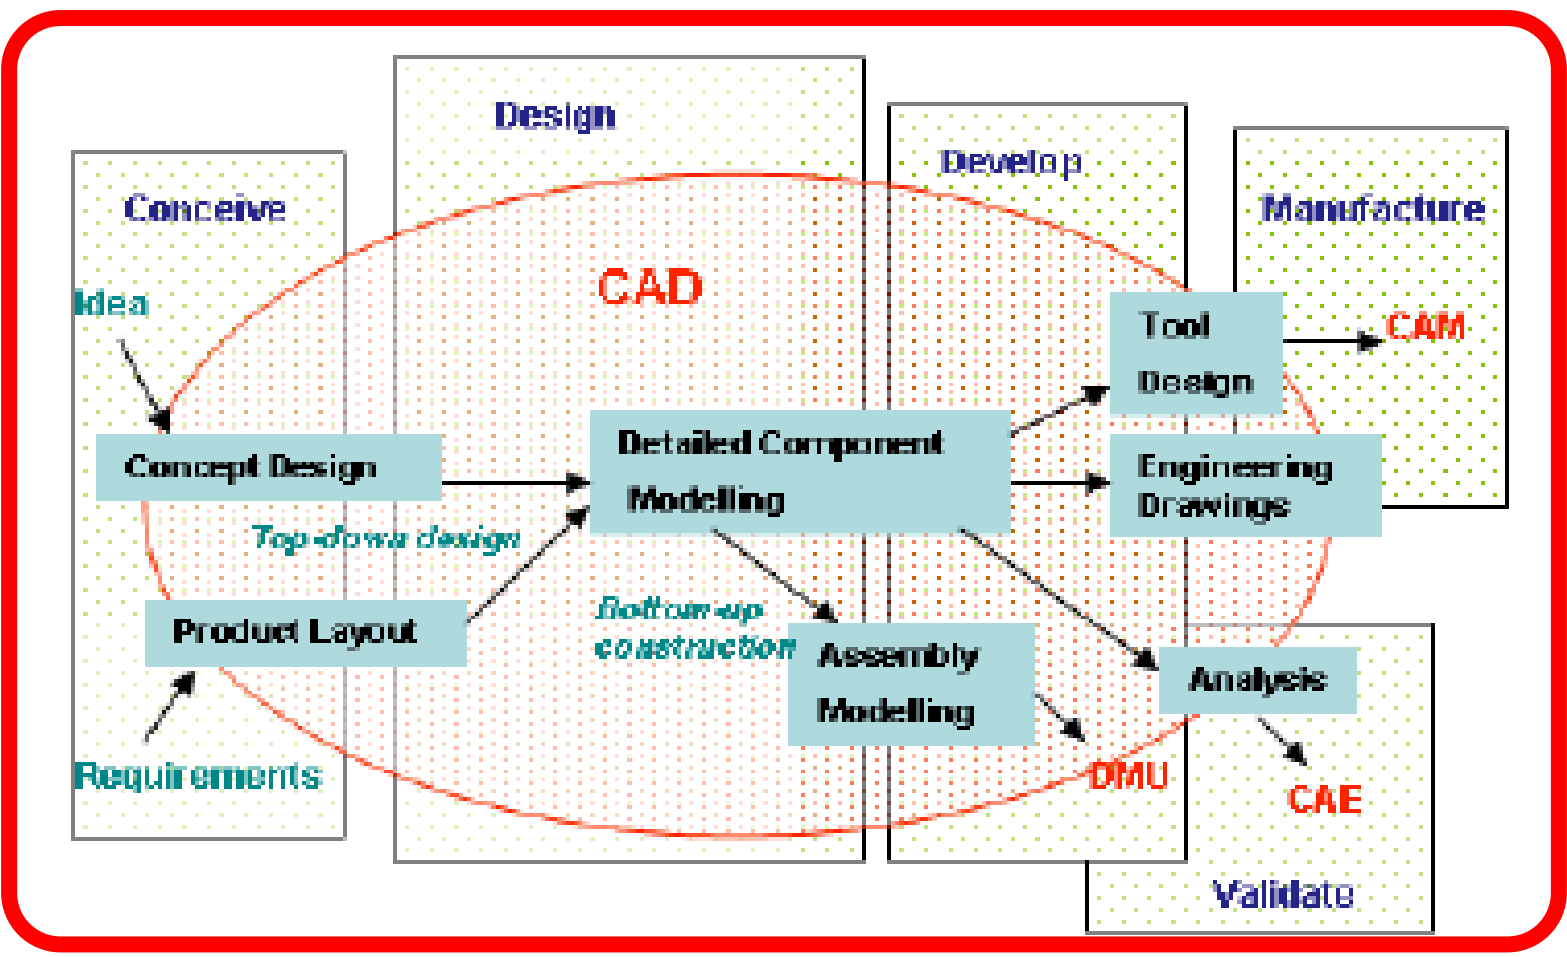

What is Inside the CAD Hub.....

Global Product Data Interoperability Summit | 2017

Engineering

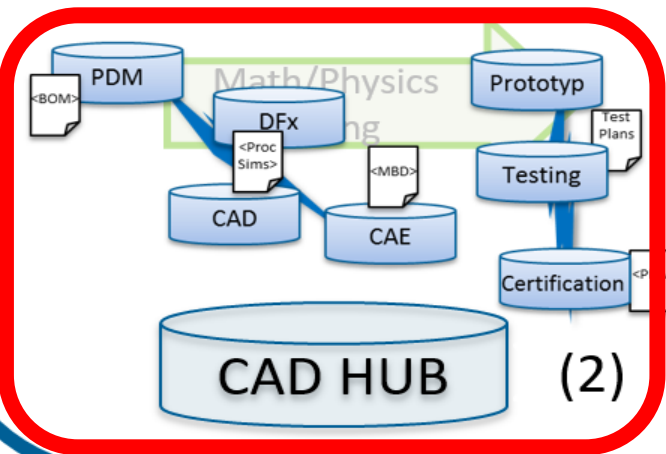

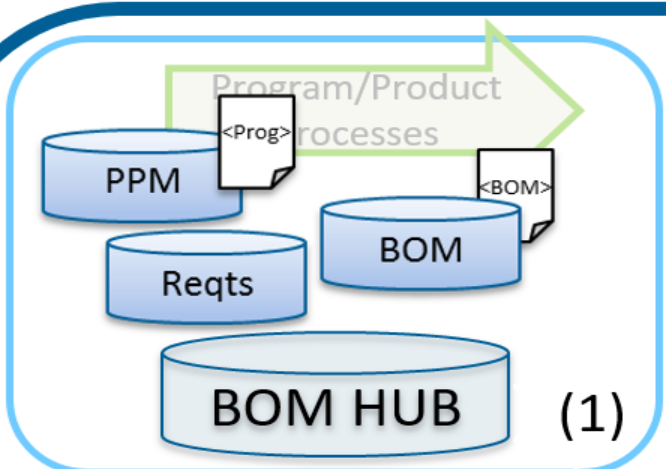

Formalized Process....

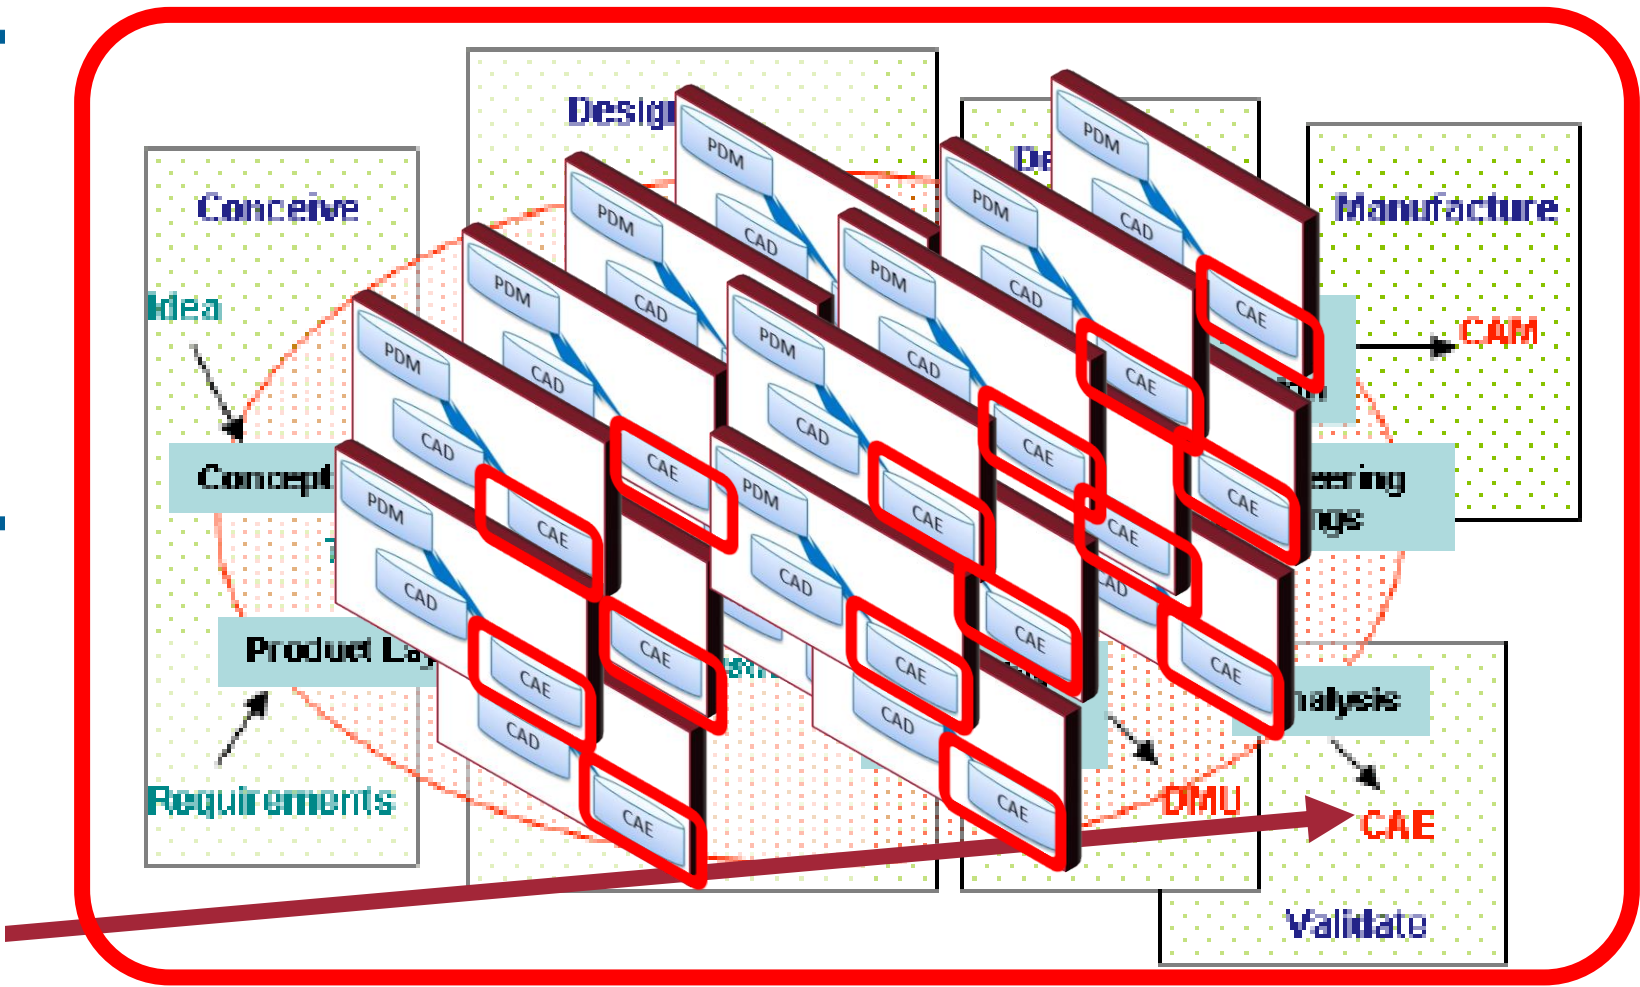

What is “REALLY” Inside the CAD Hub.....

Global Product Data Interoperability Summit | 2017

Engineering

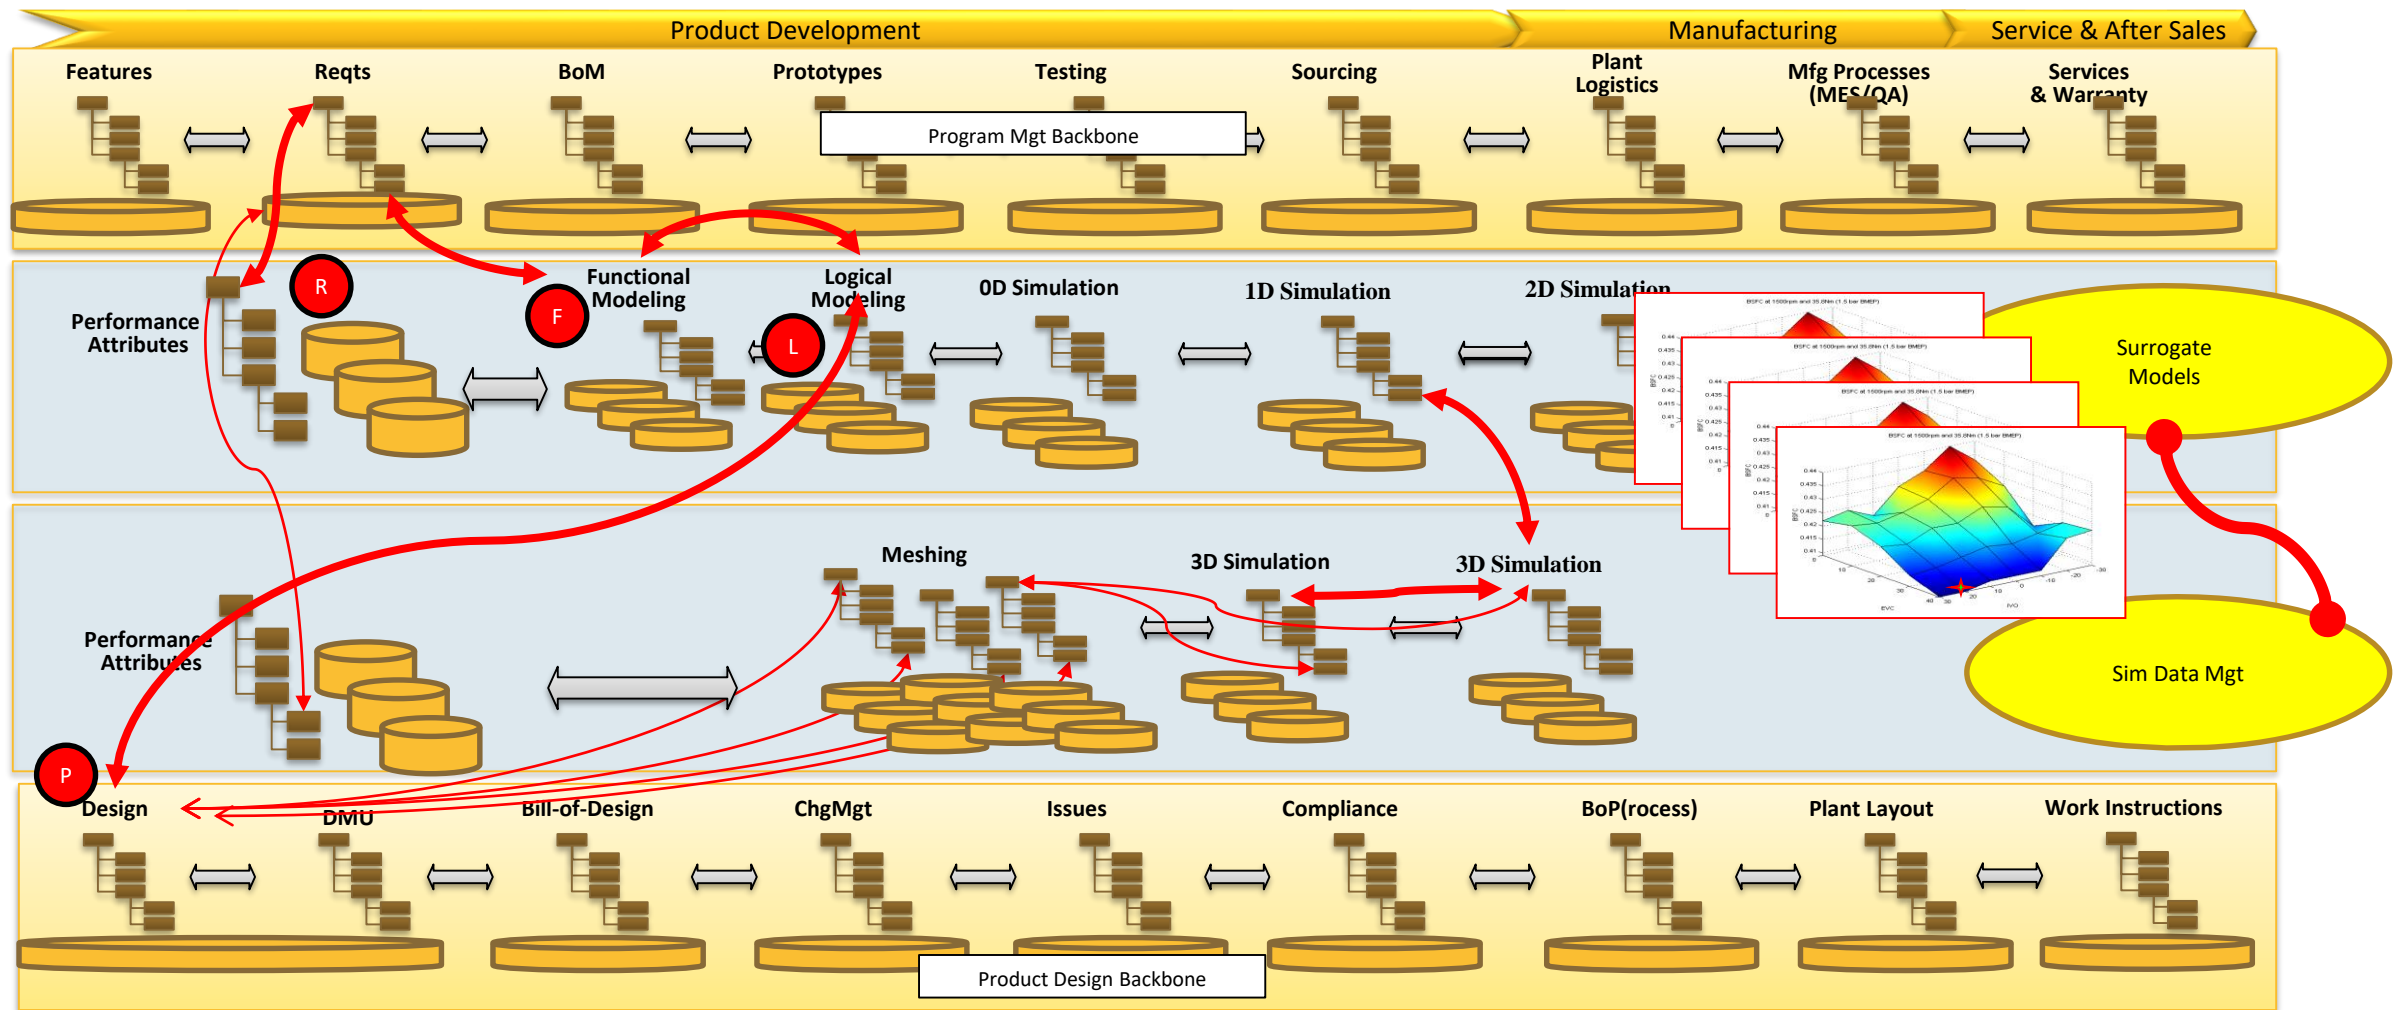

Ad Hoc Process....

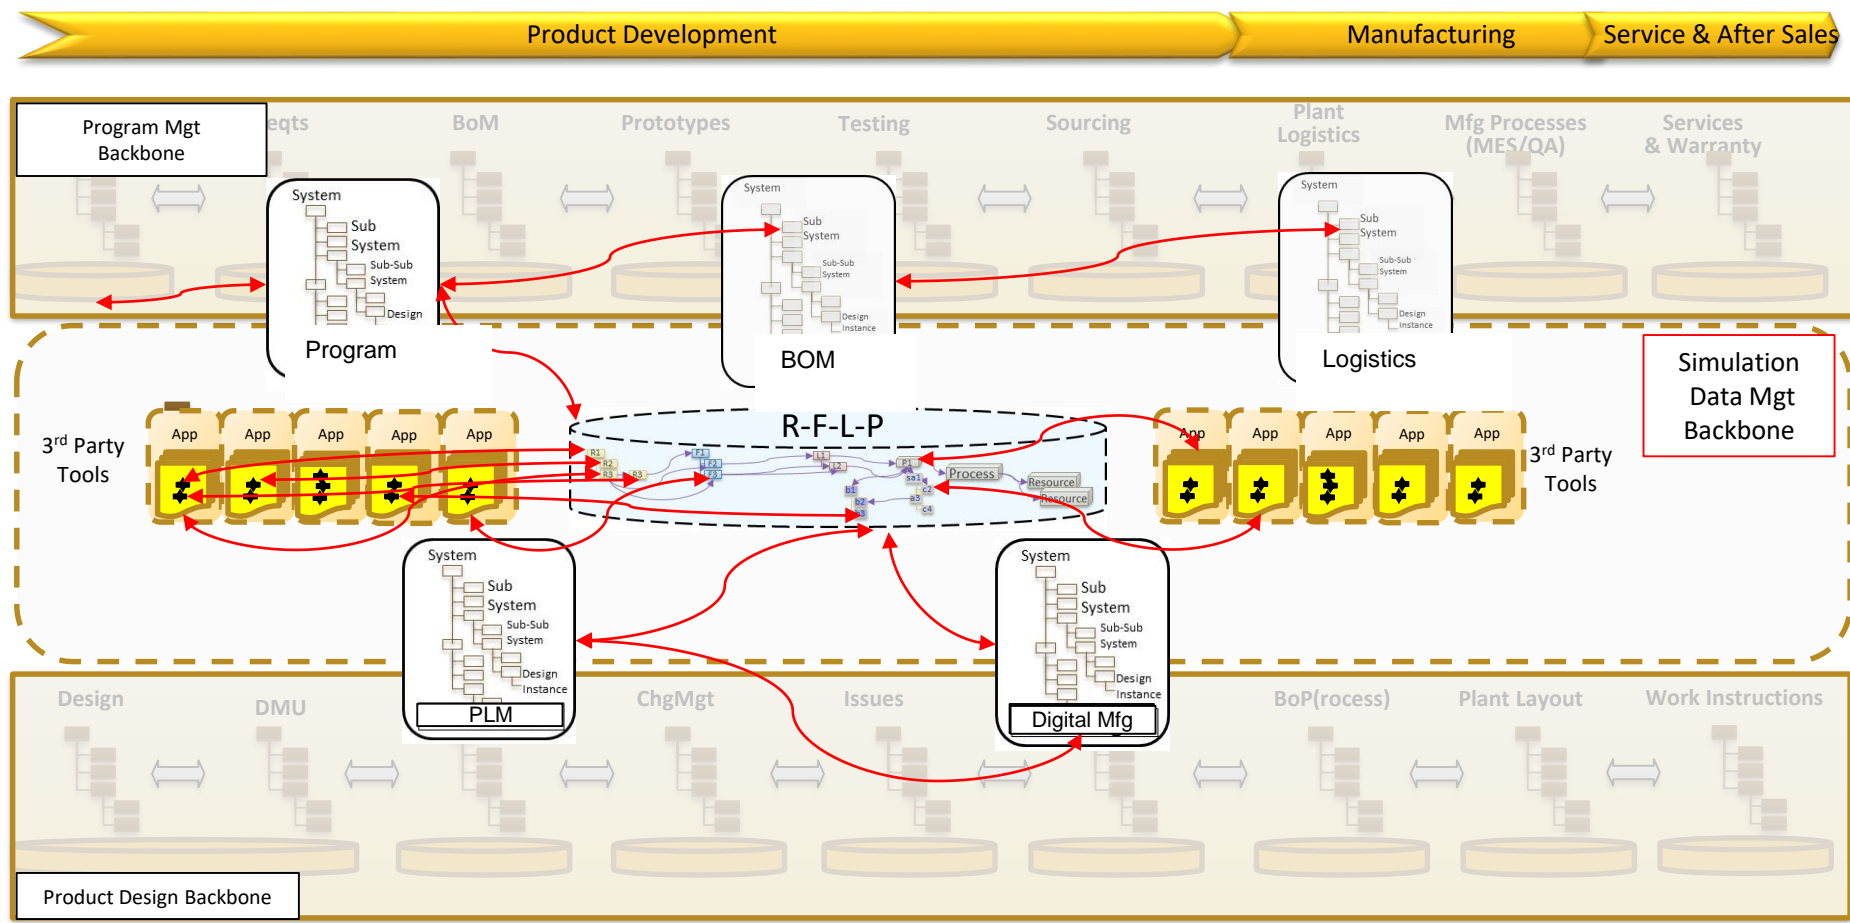

The need to manage a Formalized Simulation Backbone....

Global Product Data Interoperability Summit | 2017

And.... must manage massive heterogeneity

Global Product Data Interoperability Summit | 2017

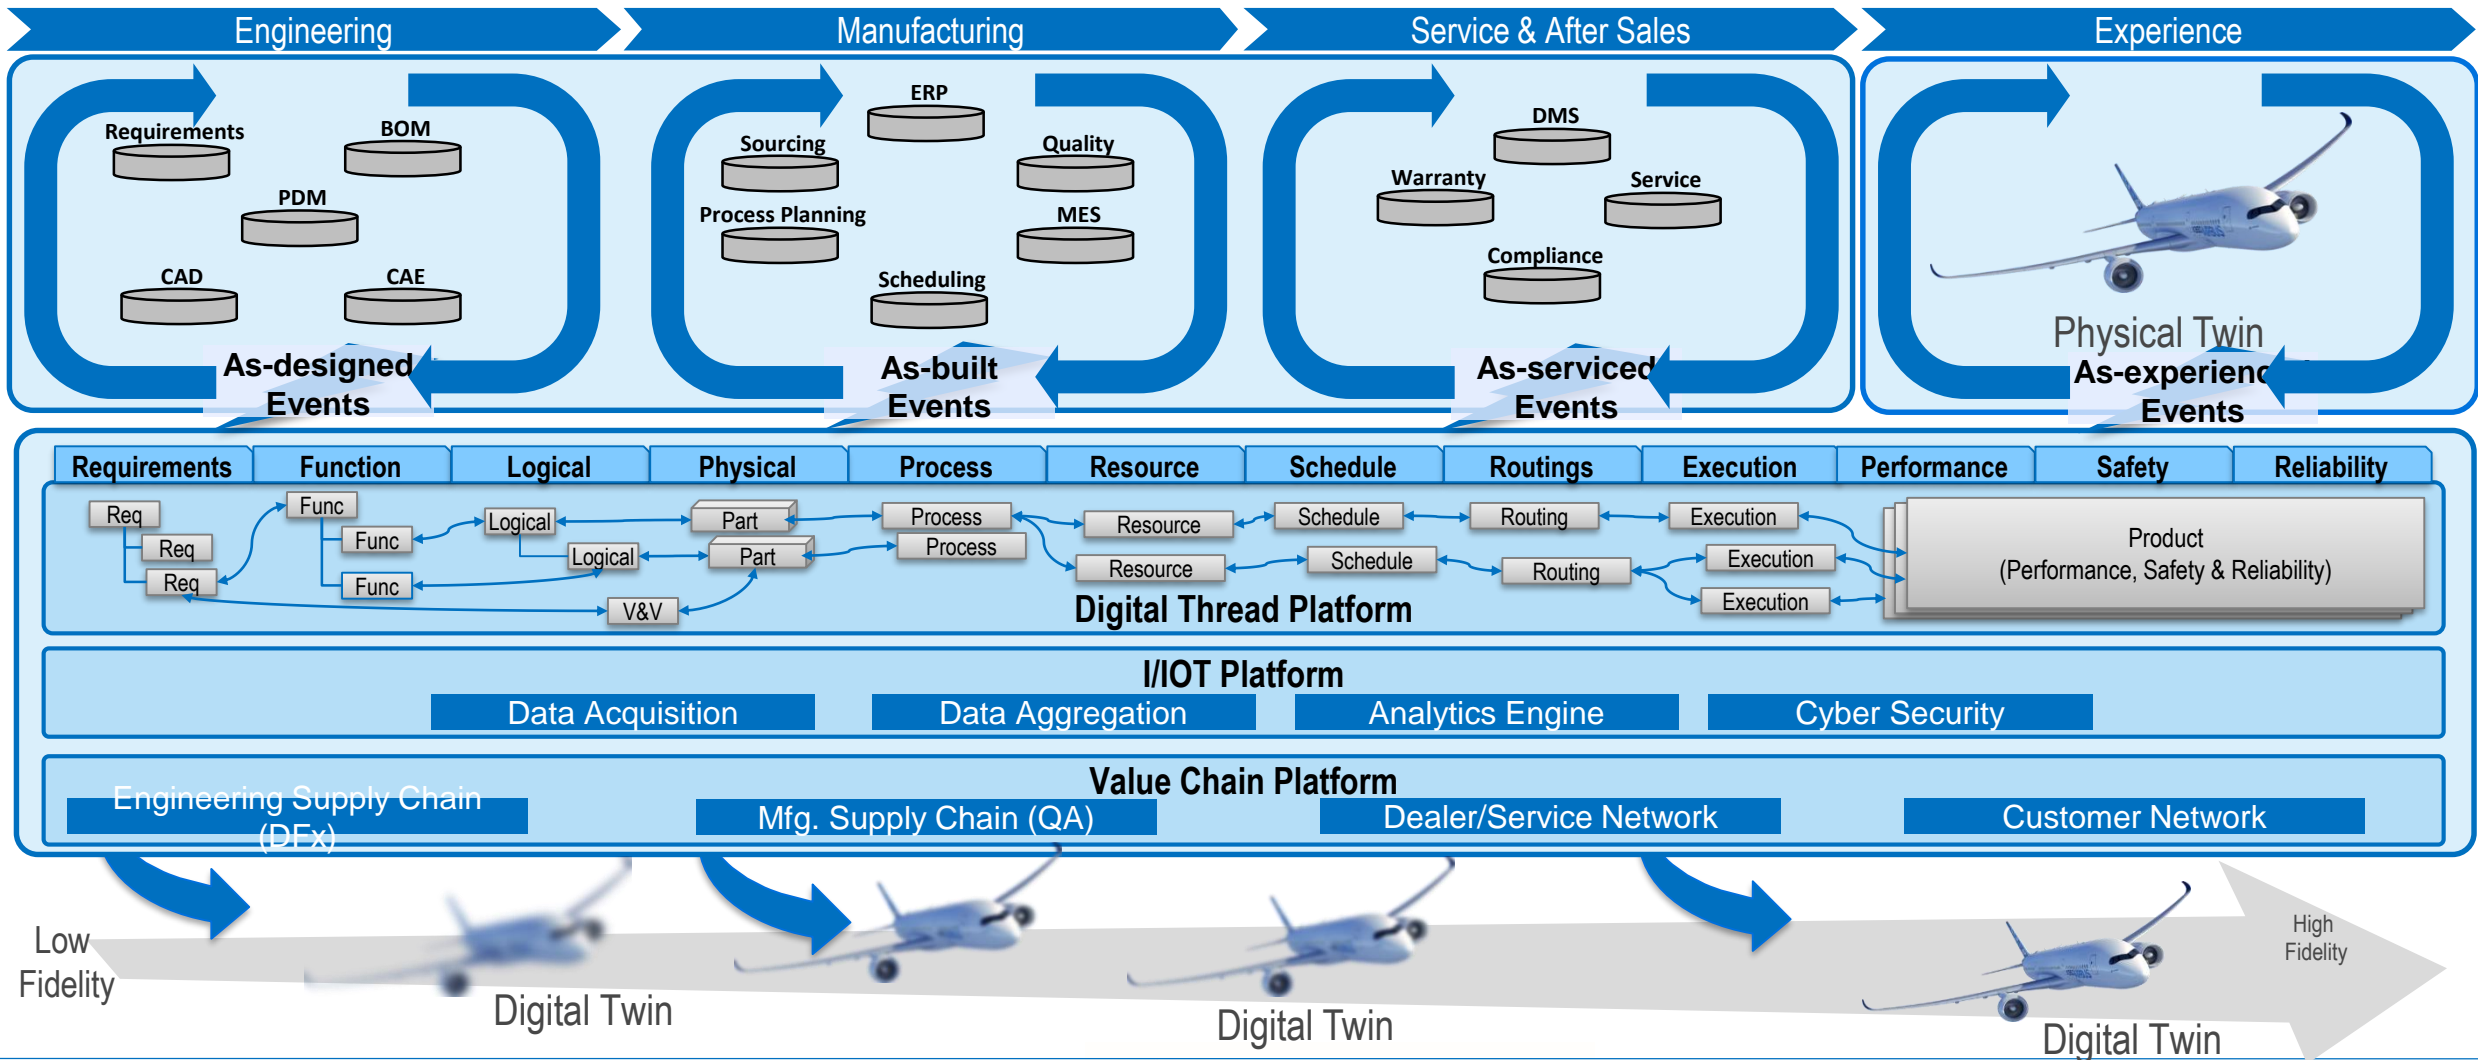

Fueled by Linked Data & Semantics

A PATH FORWARD.....

Enabling the Model Based Enterprise

Global Product Data Interoperability Summit | 2017

Digital Thread Consumption.....

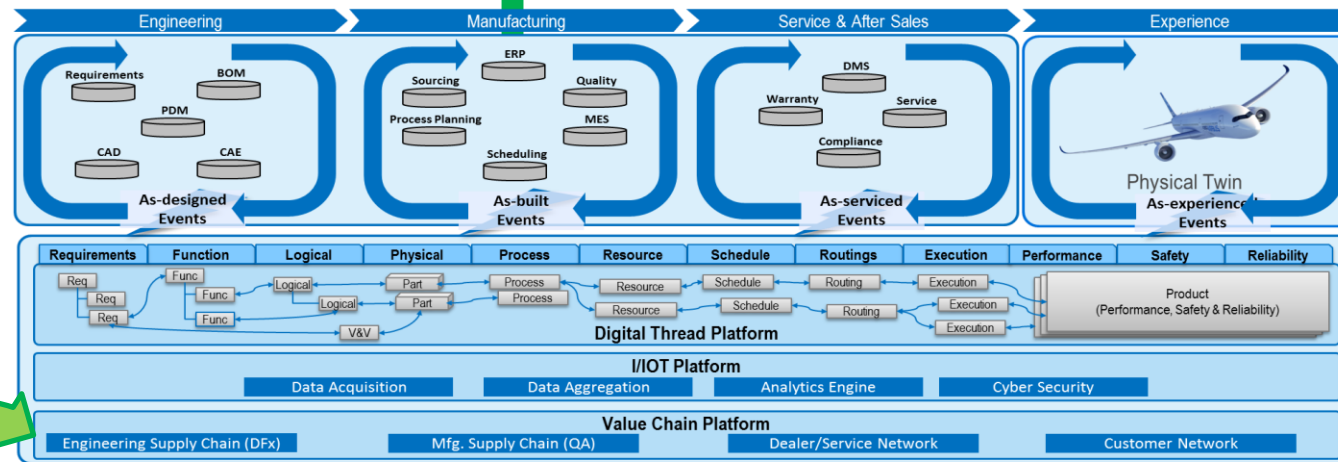

Global Product Data Interoperability Summit | 2017

Predictive Models

- Statistical Methodologies
- Sparse data sets
- Massive variability/correlations

Context

Trends/Patterns

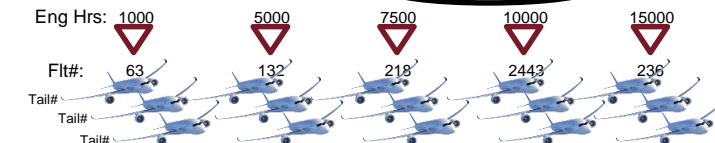

Rules/Std

Explanatory Models

- Enabling prescriptive analysis

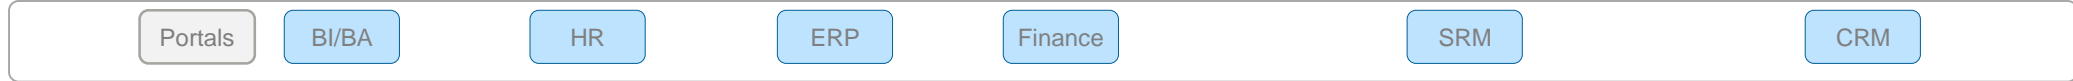

RCA

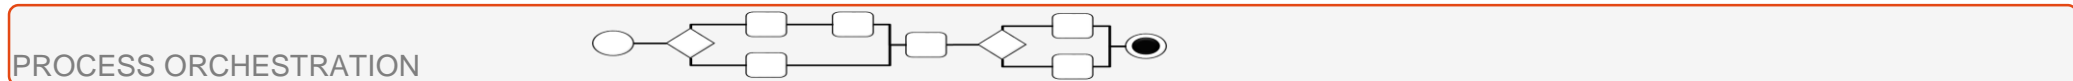

Digital Enterprise : Solution Topology

Global Product Data Interoperability Summit | 2017

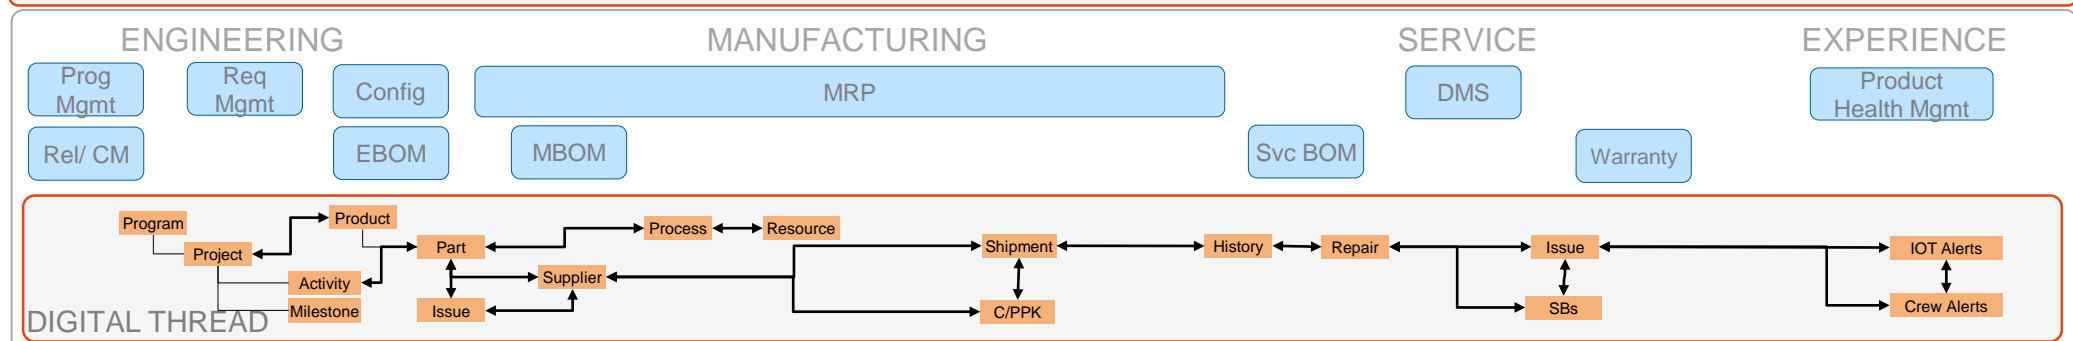

1 Visibility Portals

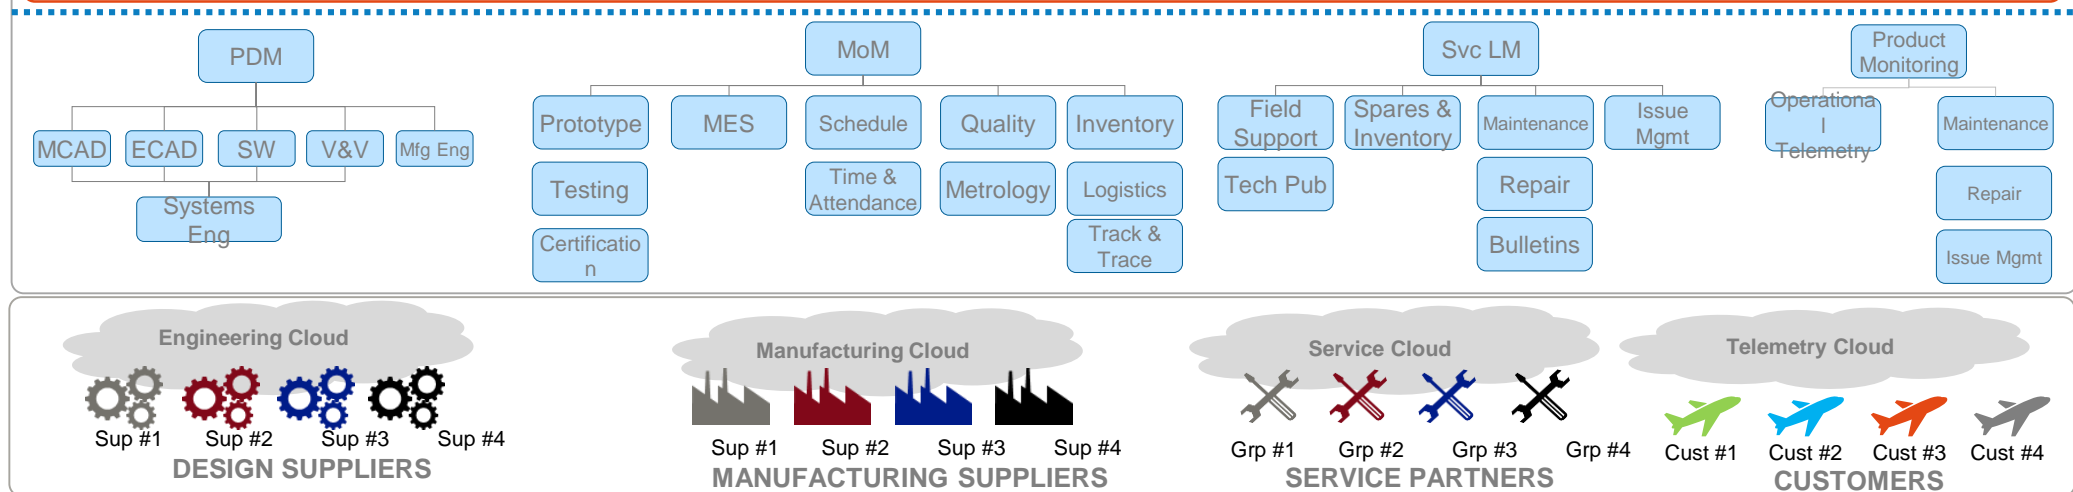

2 Process Orchestration

3 Digital Thread

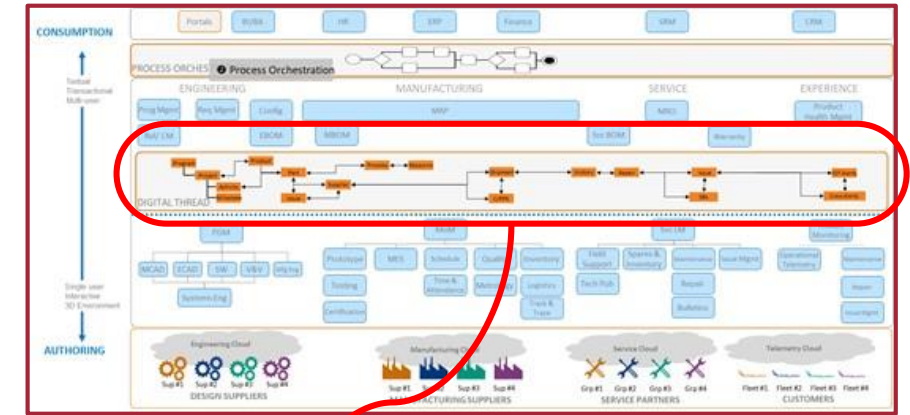

4 Edge Services

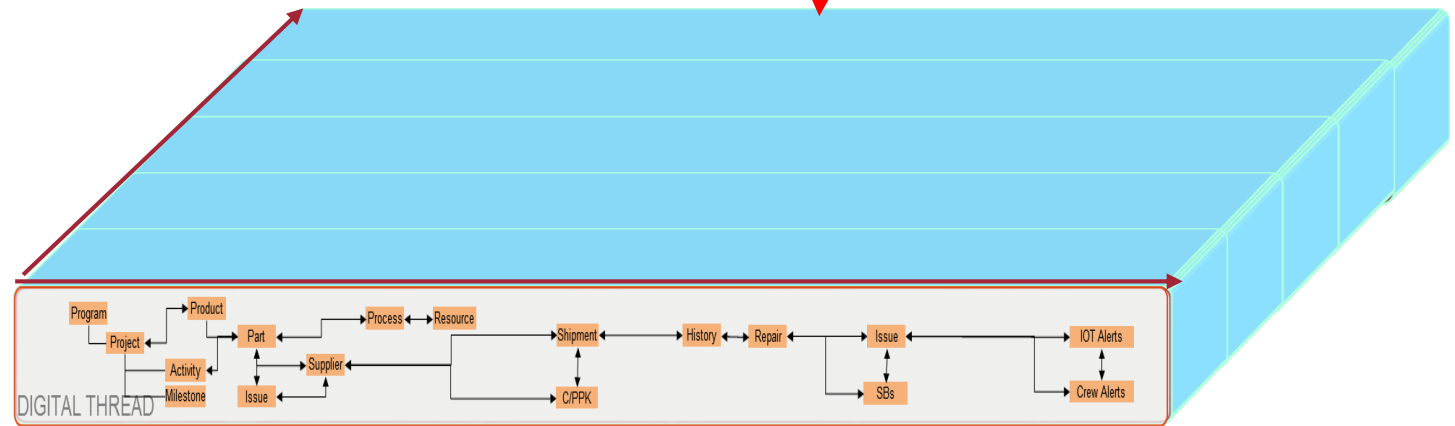

Digital Thread : Potential Value

Global Product Data Interoperability Summit | 2017

- **Digital Thread Value Prop**
 - Provide bi-directional traceability to improve the **context** and **impact analysis** across the domains (horizontal/breadth) and in a domain (vertical/depth)
 - Make key information available to all stake holder thus improving **visibility**
 - Provide information in near real-time thus reducing **latency**

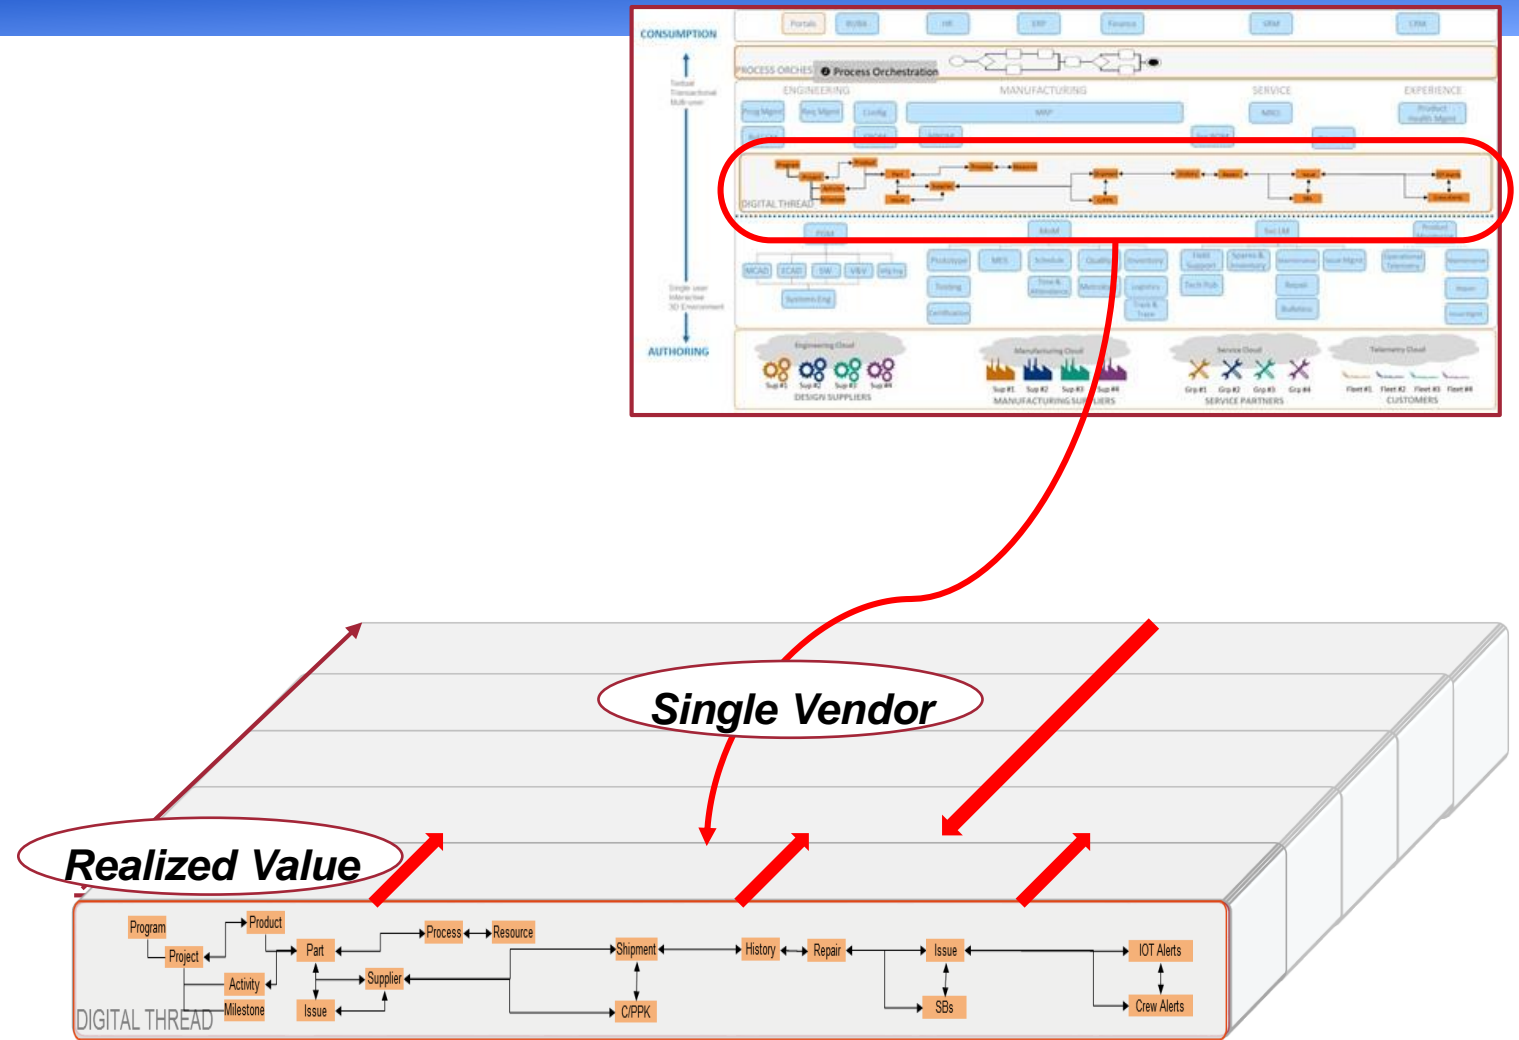

Potential Value

Digital Thread : Single Vendor Value

Global Product Data Interoperability Summit | 2017

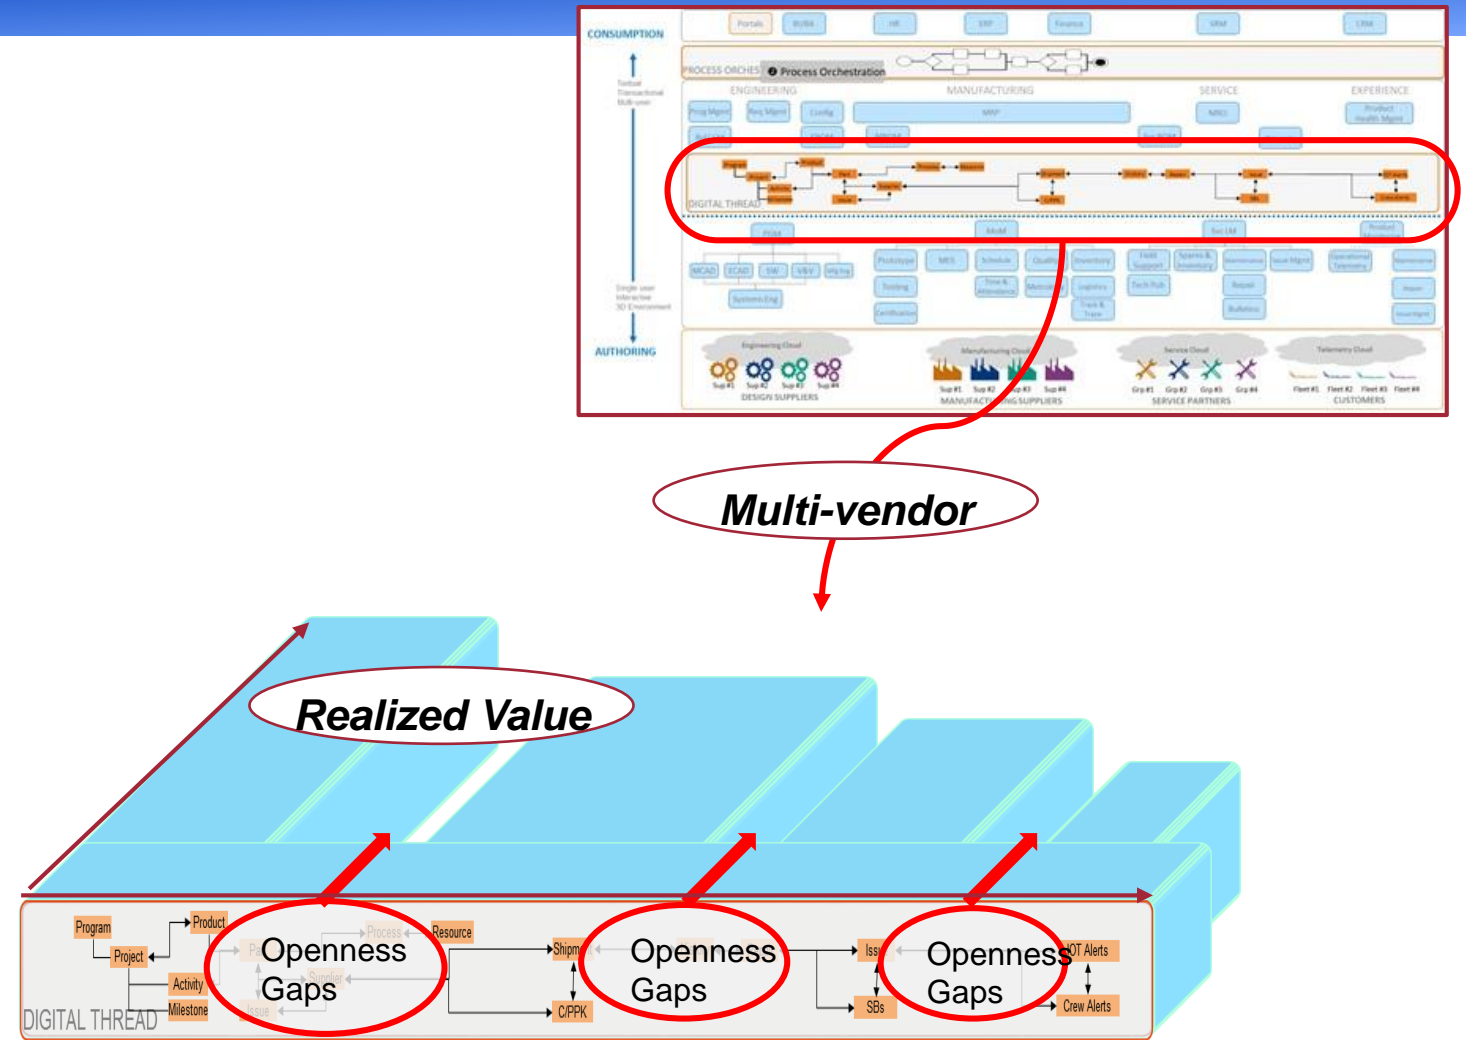

- In a single vendor system the value of a Digital Thread is constrained by
 - Functional nature of the systems
 - Domain specific interpretation of data and elements
 - The value is reduced to a common minimum subset

Digital Thread : Multi-vendor with “openness” constraints

Global Product Data Interoperability Summit | 2017

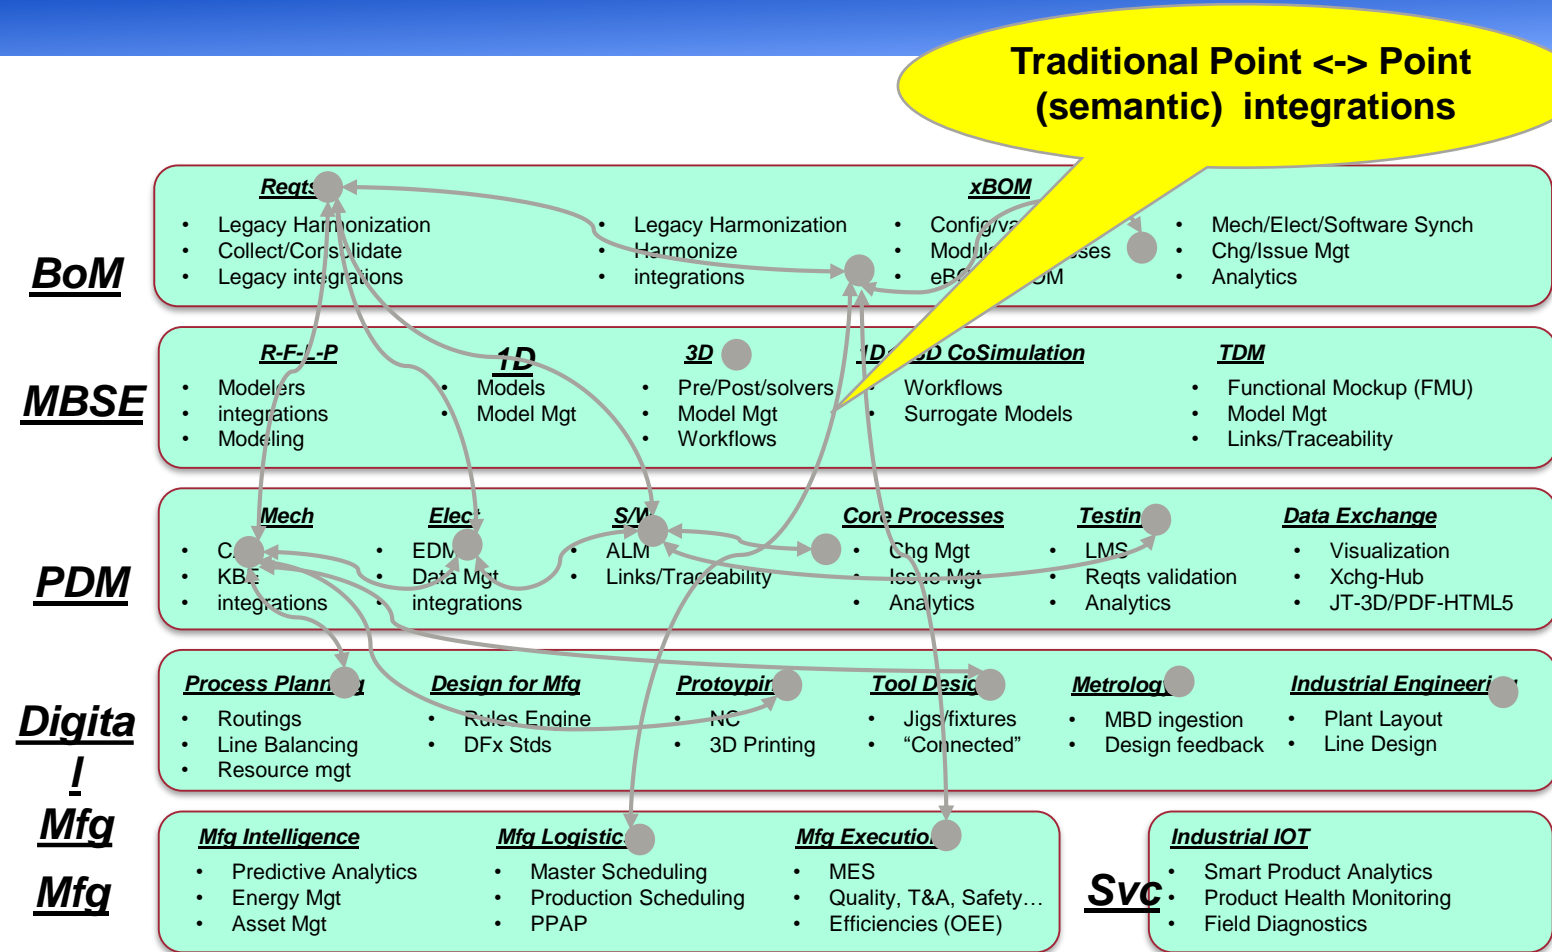

- In a multi-vendor environment the value is constrained by
 - Domain specific interpretation of data and elements (different semantics)
 - Lack of Access in systems for users in other domains
 - Quality of Data
 - Openness constraints
- The value in few systems will be high and across the systems will be low

Enterprise Application Footprint with Traditional Integrations (Fixed Mappings)

Global Product Data Interoperability Summit | 2017

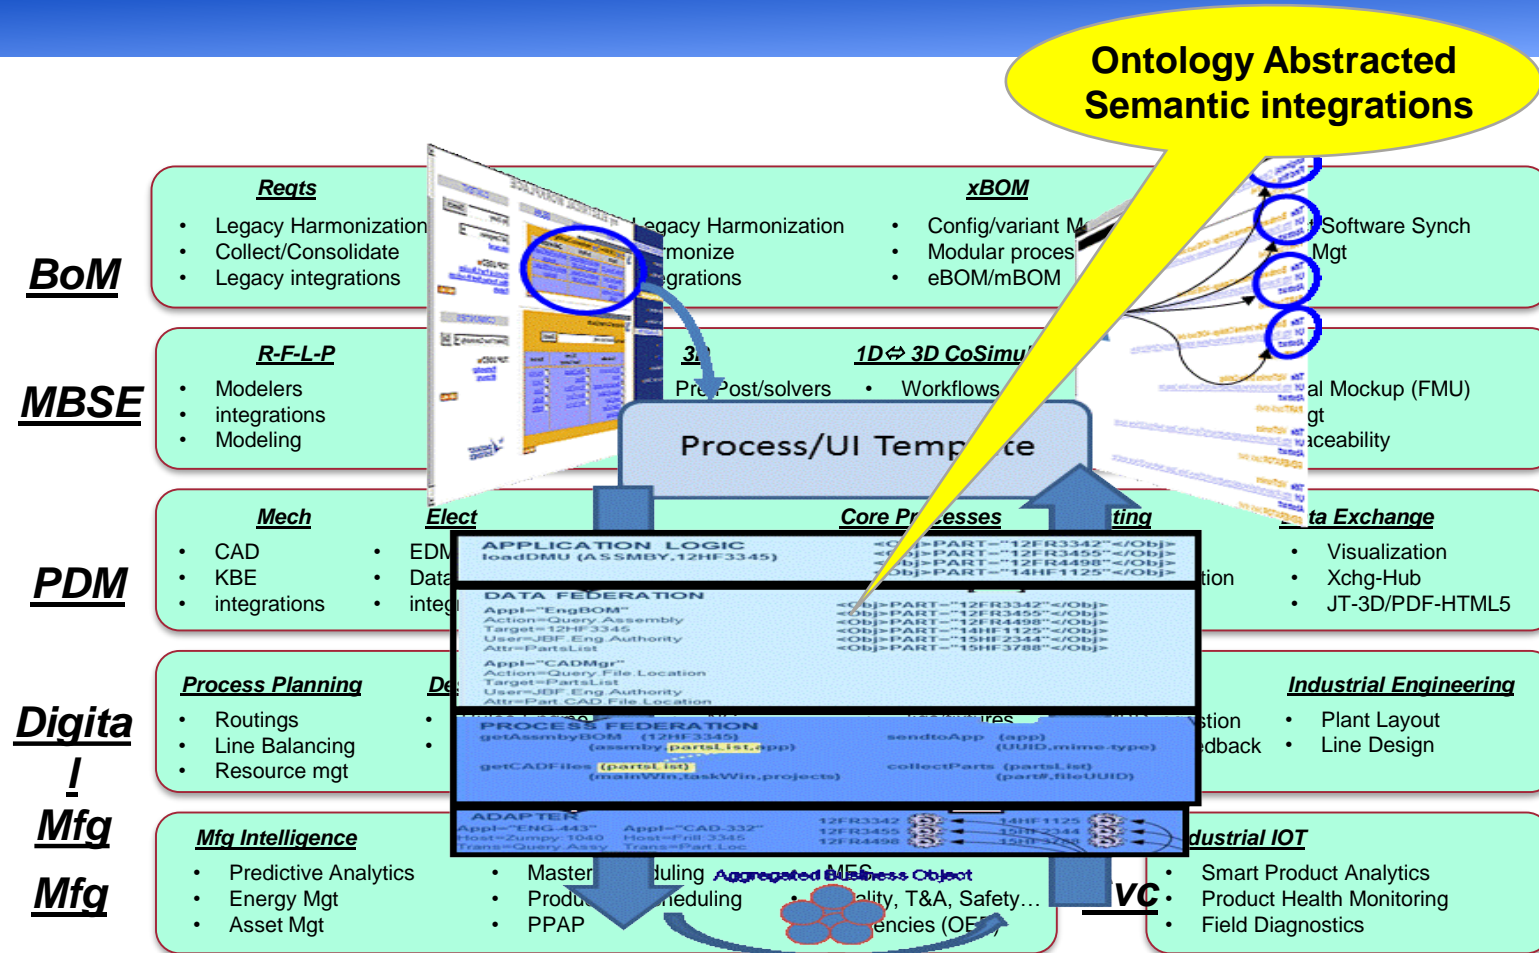

- While traditional integrations provide data to different systems – are not ideal as
 - Traceability is still distributed across system **impeding visibility** and context
 - Re-work** required for adding new objects and relations (due to fixed object mapping)
 - Assuring **data quality** (data master vs. data consumer) is difficult
- These integrations can also be thought as “semantic” but with fixed mapping

Ontologically Abstracted Semantic Integrations

Global Product Data Interoperability Summit | 2017

- Ontologically Abstracted Semantic Integrations help
 - Domain Specific (Local) and Domain Neutral (Global) Ontologies to **bridge across** domain specific applications
 - Federate data thus providing always the **latest data** without duplication
 - Provides a **neutral** way to represent bi-directional **traceability**

N-Dimensional Mappings (FUNCTIONAL) → with Associativity → Vertically & Horizontally

Global Product Data Interoperability Summit | 2017

BoM

Reqts

- Legacy Harmonization
- Collect/Consolidate
- Legacy integrations

xBOM

- Legacy Harmonization
- Harmonize
- integrations
- Config/variant Mgt
- Modular processes
- eBOM/mBOM
- Mech/Elect/Software Synch
- Chg/Issue Mgt
- Analytics

MBSE

R-F-L-P

- Modelers
- integrations
- Modeling

1D

- Models
- Model Mgt

3D

- Pre/Post/solvers
- Model Mgt
- Workflows

1D ↔ 3D CoSimulation

- Workflows
- Surrogate Models

TDM

- Functional Mockup (FMU)
- Model Mgt
- Links/Traceability

PDM

Mech

- CAD
- KBE
- integrations

Elect

- EDM
- Data Mgt
- integrations

S/W

- ALM
- Links/Traceability

Core Processes

- Chg Mgt
- Issue Mgt
- Analytics

Testing

- LMS
- Reqts validation
