Agenda

Global Product Data Interoperability Summit | 2018

- **Project Overview**
- **Participants and the CH-53K Program**
- **3D Data Exchange Project Solution**
- **Key Points and Next Steps**
- **Acknowledgements**

Project Overview

Global Product Data Interoperability Summit | 2018

SIKORSKY CH-53K

Use Case:

- DOD program offices moving to Model Based Enterprise processes must automate organization and verification of OEM delivered data
- Programs must deliver MIL-STD-31000 Technical Data Packages for engineering, DLA, LOTAR to avoid proprietary formats

Details:

- An automated system to organize and verify OEM MBD data for generation of validated 3D PDF with STEP Technical Data Packages

Benefits:

- Millions saved on a typical defense program by avoiding manual OEM data organization or validated MBD TDP creation
- Error reduction and increased productivity via application of MBD principles in DOD programs
- Acquisition costs reduced

Anark Corporation

Global Product Data Interoperability Summit | 2018

Leading provider of technical enterprise content management (ECM) software and solutions with advanced visual collaboration for enterprise manufacturing

Empowering the MBE and Digital Thread revolution within A&D, Energy, Industrial, High Tech, Automotive, and Medical Equipment Sectors

Growing company with worldwide network of technology and integration partners

Anark Corporation HQ in Boulder, Colorado, with offices in the Washington DC, Detroit, Chicago, San Francisco, and Bangalore

International TechneGroup (ITI)

Global Product Data Interoperability Summit | 2018

Over 30 years experience in developing and delivering interoperability solutions and consulting services to the manufacturing industry

ITI solves complex product data interoperability problems, so that our customers can focus on making great products

Over 1,900 global engineering and manufacturing clients and a trusted advisor to product data standard and industry associations

ITI HQ in suburban Cincinnati, Ohio, with offices in Cambridge (UK), Munich, Tel Aviv, Bologna, and subject matter experts around the globe

Project Participants and the CH-53K

- **NAVAIR PMA-261** – Customer and the NAVAIR CH-53K program office
 - **Anark Corporation** - 3D PDF and DLA package publisher
 - **ITI** – CAD enhancement, STEP generation, validation/verification
 - **Razorleaf Gov Solutions** - Process and ENOVIA integration
 - **Naval Shipyard and Advanced Manufacturing (NSAM)** – Project Mgmt
-
- **CH-53K is the DoD's most powerful helicopter ever!**
 - Designed as a new-build helicopter to triple the CH-53E lift capability
 - Expands the fleet's ability to move more material, more rapidly. 14 tons at a mission radius of 110 nautical miles in high/hot environments
 - Proven and mature technologies with a lower operating cost per aircraft
 - Designed for equivalent logistics shipboard footprint and less direct maintenance man hours per flight hour
 - OEM is Sikorsky Aircraft using 3DEXPERIENCE

3D Data Exchange Project Introduction

- **3D Model to 3D PDF conversion capability provides production-quality model-based documents and Technical Data Packages (TDP) for down-stream users**
 - Single configuration controlled data set, thereby accelerating response times, reducing cost, increasing aircraft availability and safety of flight
 - Verifying/validating thousands of complex 3D models in a short time
- **Benefits of a secure 3D Data Exchange system (3DDE) are numerous**
 - Reduce the Amount of Reverse Engineering Requirements
 - Reduce Labor for Translation and Healing of CAD Data
 - Reduce the Amount of Rework Due to Incorrect Technical Data
 - Reduce Requirements for TDP **DLA 339s** Caused by Programs Using Full Model Based Definition In Lieu of 2D Drawing
 - NAVSUP/DLA ability to provision using 3D PDFs in lieu of native CAD Models in up to 15 different software sets

DLA 339 Records Management System Program gives military Engineering Support Activities online access in one place to access Engineering Support Requests.

Solution: Tech Data Profile

- Technical data package overview
 - CATIA V5 MBD + associated lists in TIF & PDF
 - Ambiguous Engineering BOMs in Excel
 - Heterogeneous standards/norms
 - Many data domains (sheet metal, composite, tubing, etc.)
 - Many observable “patterns”
 - Data set not “PLM-ready”

Solution: Tech Data Structure

Drawing Prints:

PL = Parts List

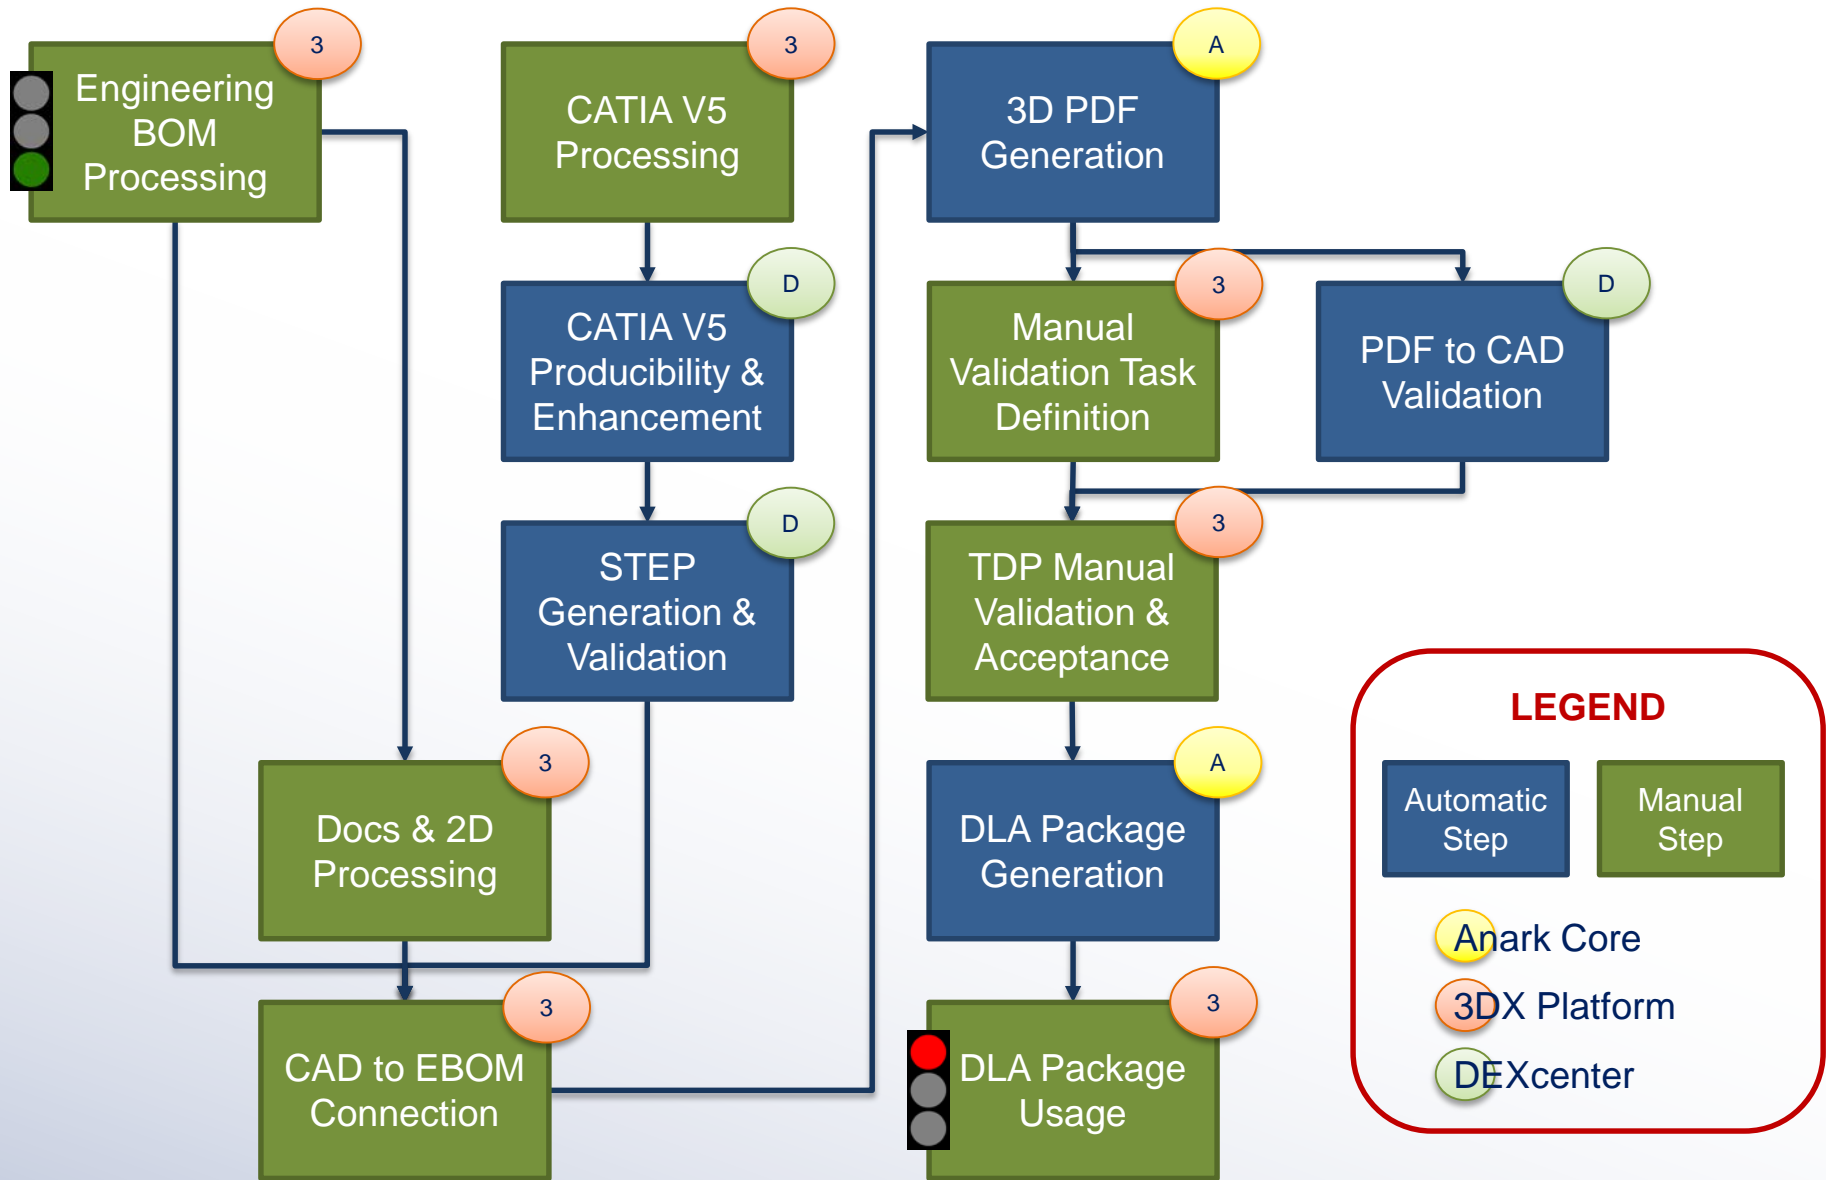

AL = Application List

FS = Field Sheet (2D Dwg)

DS = Data Sheet (Text Dwg)

* Some of the related documents shown may not be present or required

Solution: TDP Ingestion Process

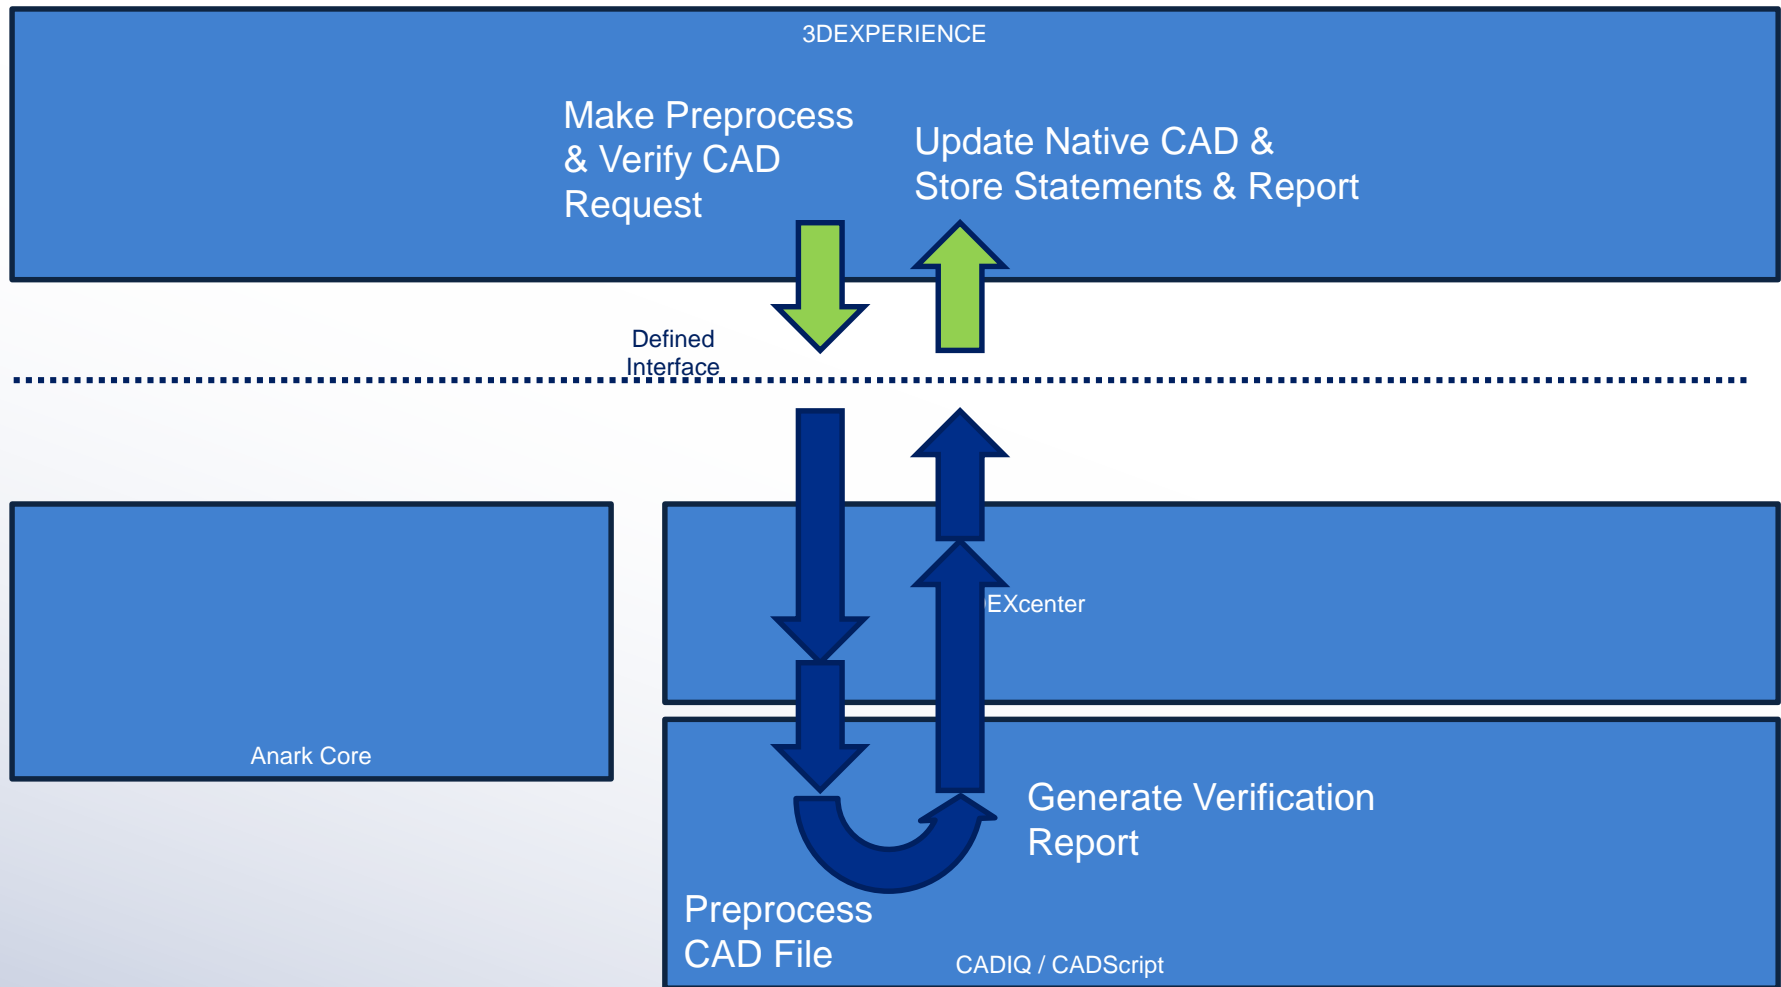

Solution: 3DDE Micro Processes

- The 3DDE system is broken down into a group of 5 sequential micro-processes
 - CATIA Preprocessing & Verification
 - STEP Generation and Validation
 - 3D PDF Generation
 - 3D PDF Validation
 - DLA Package Assembly & Publishing
- This allows individual micro-processes developed, managed, and maintained independently of one another
- Process Interface and Data Schema control are critical

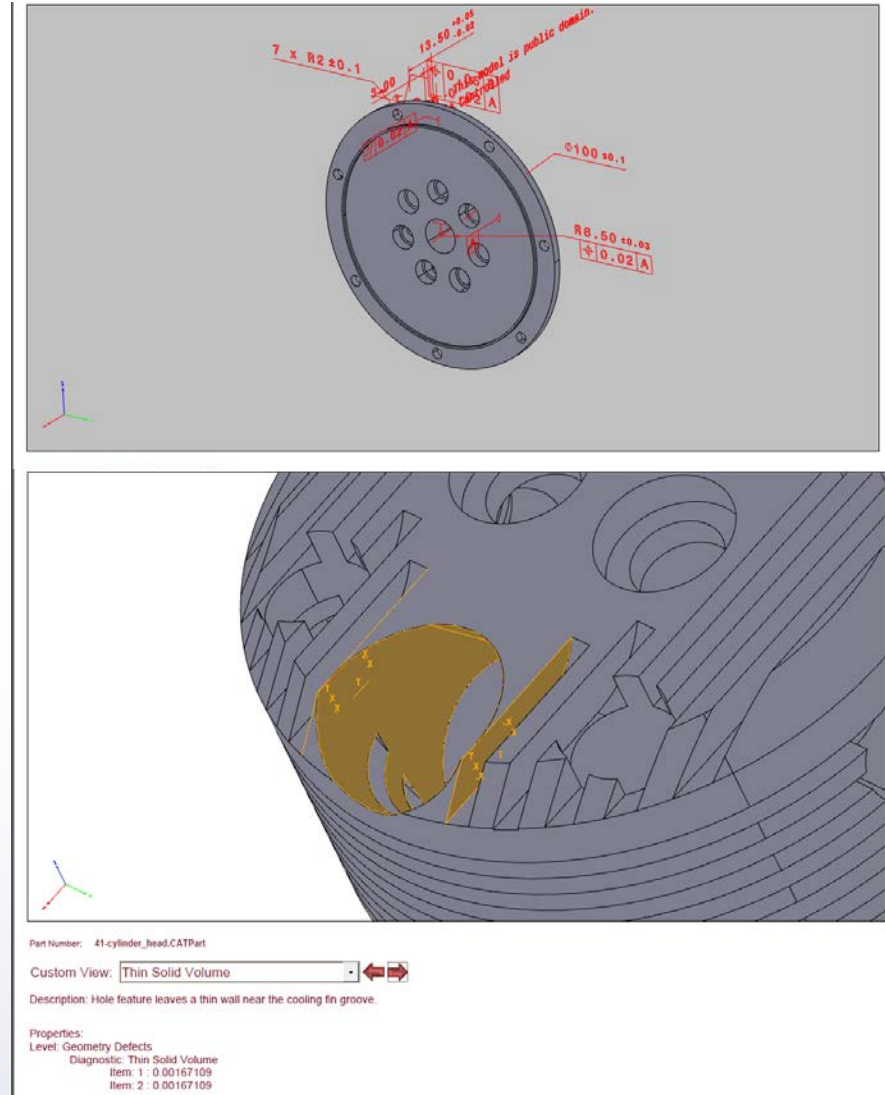

Solution: 3DDE Micro Processes

Preprocess = Extract Statements & Optimize Model for Publishing

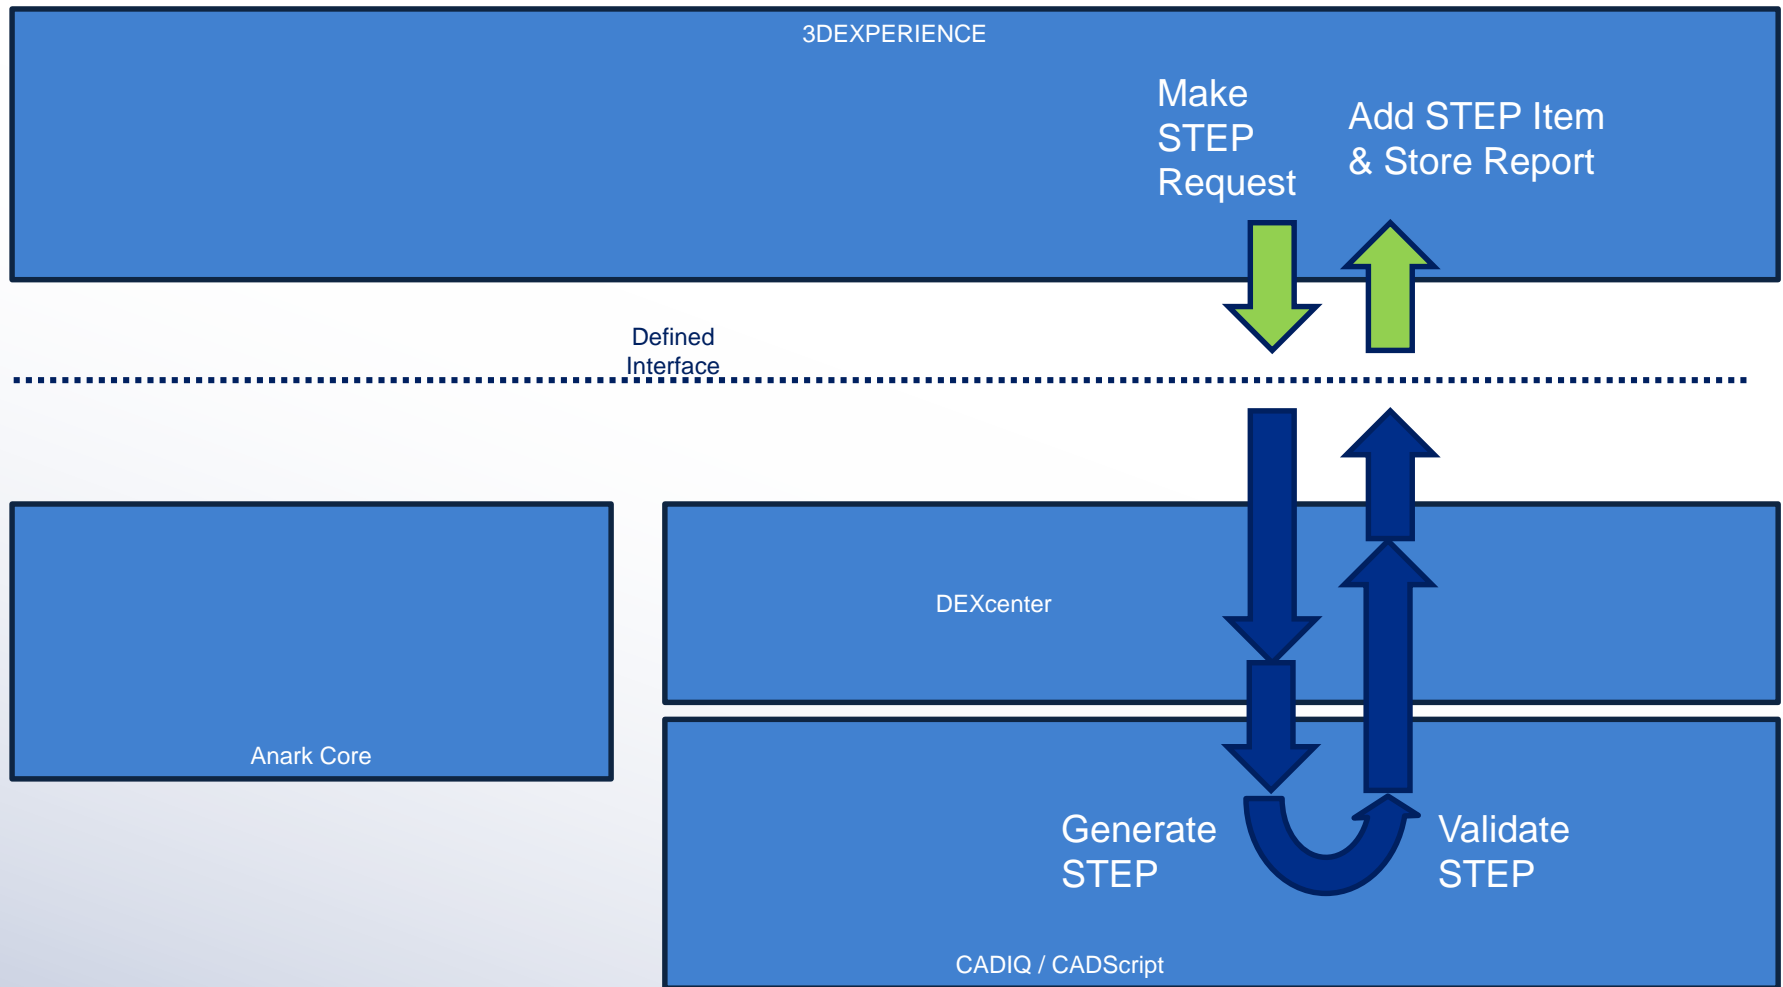

Solution: Preprocessing & Verification

- Native CATIA preprocessing for optimized publishing
 - Rights Statements extraction
 - Visibility management
- Verification of native CATIA models
 - Geometry, PMI, Attributes, Structure, Views

Solution: 3DDE Micro Processes

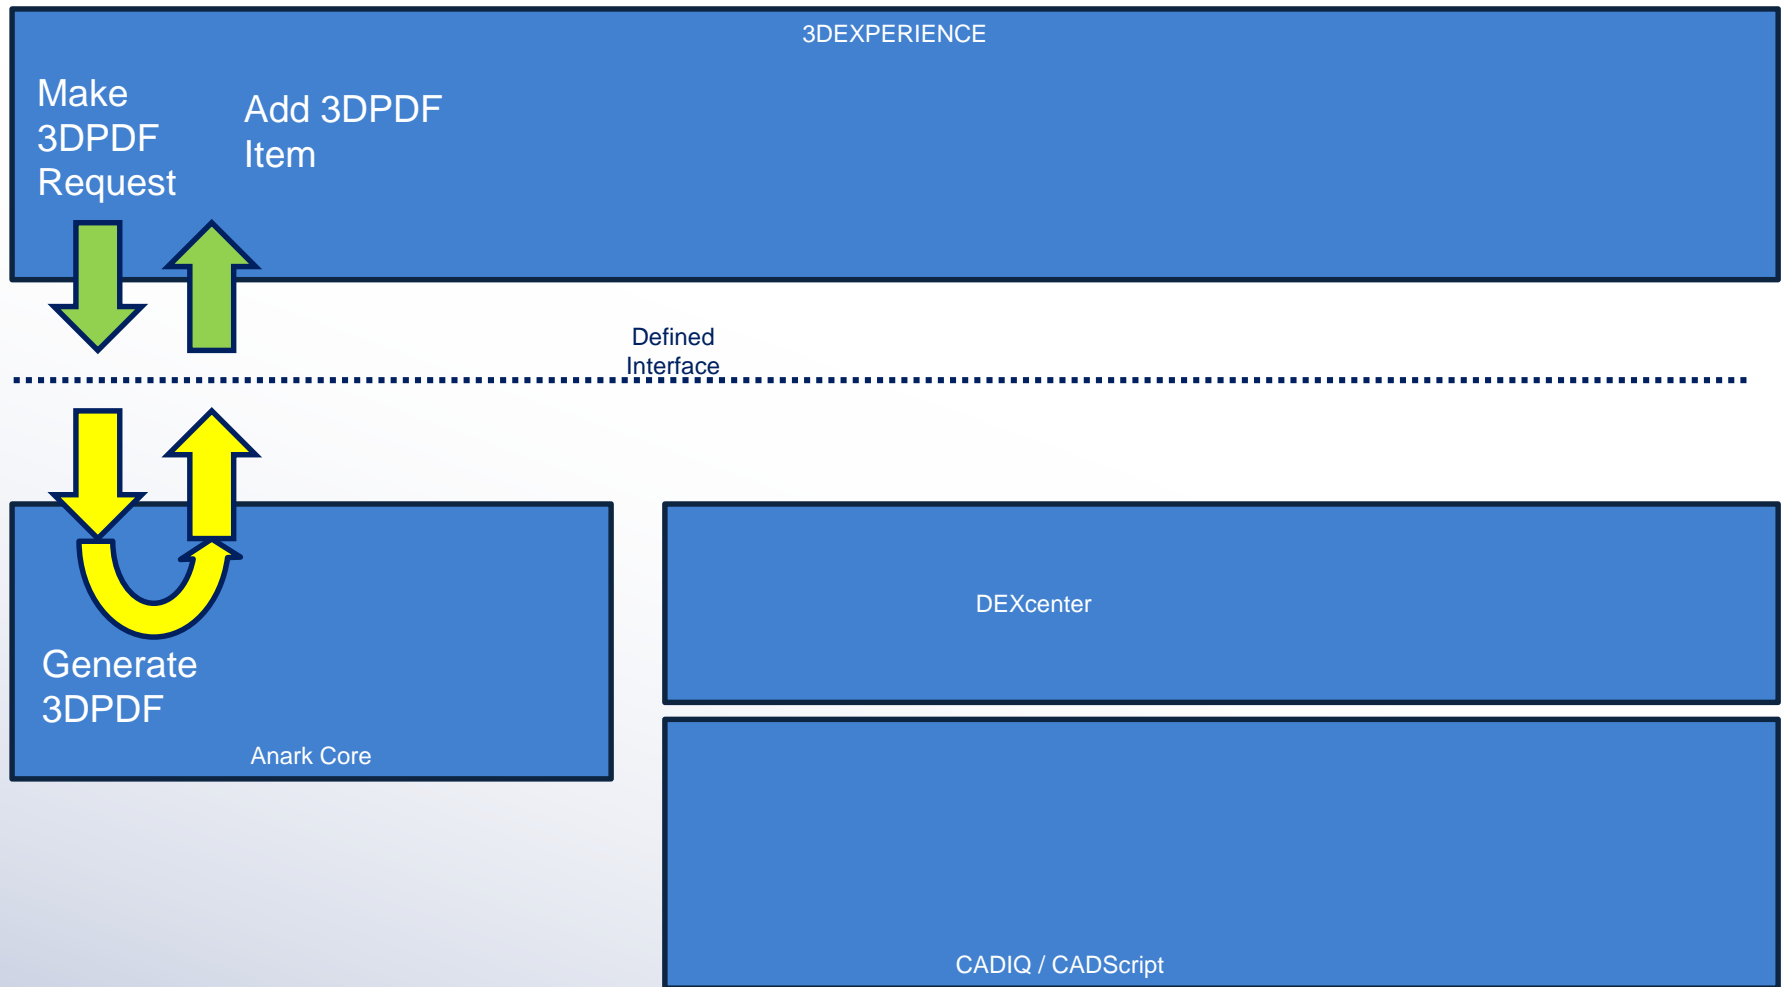

Solution: STEP Generation / Validation

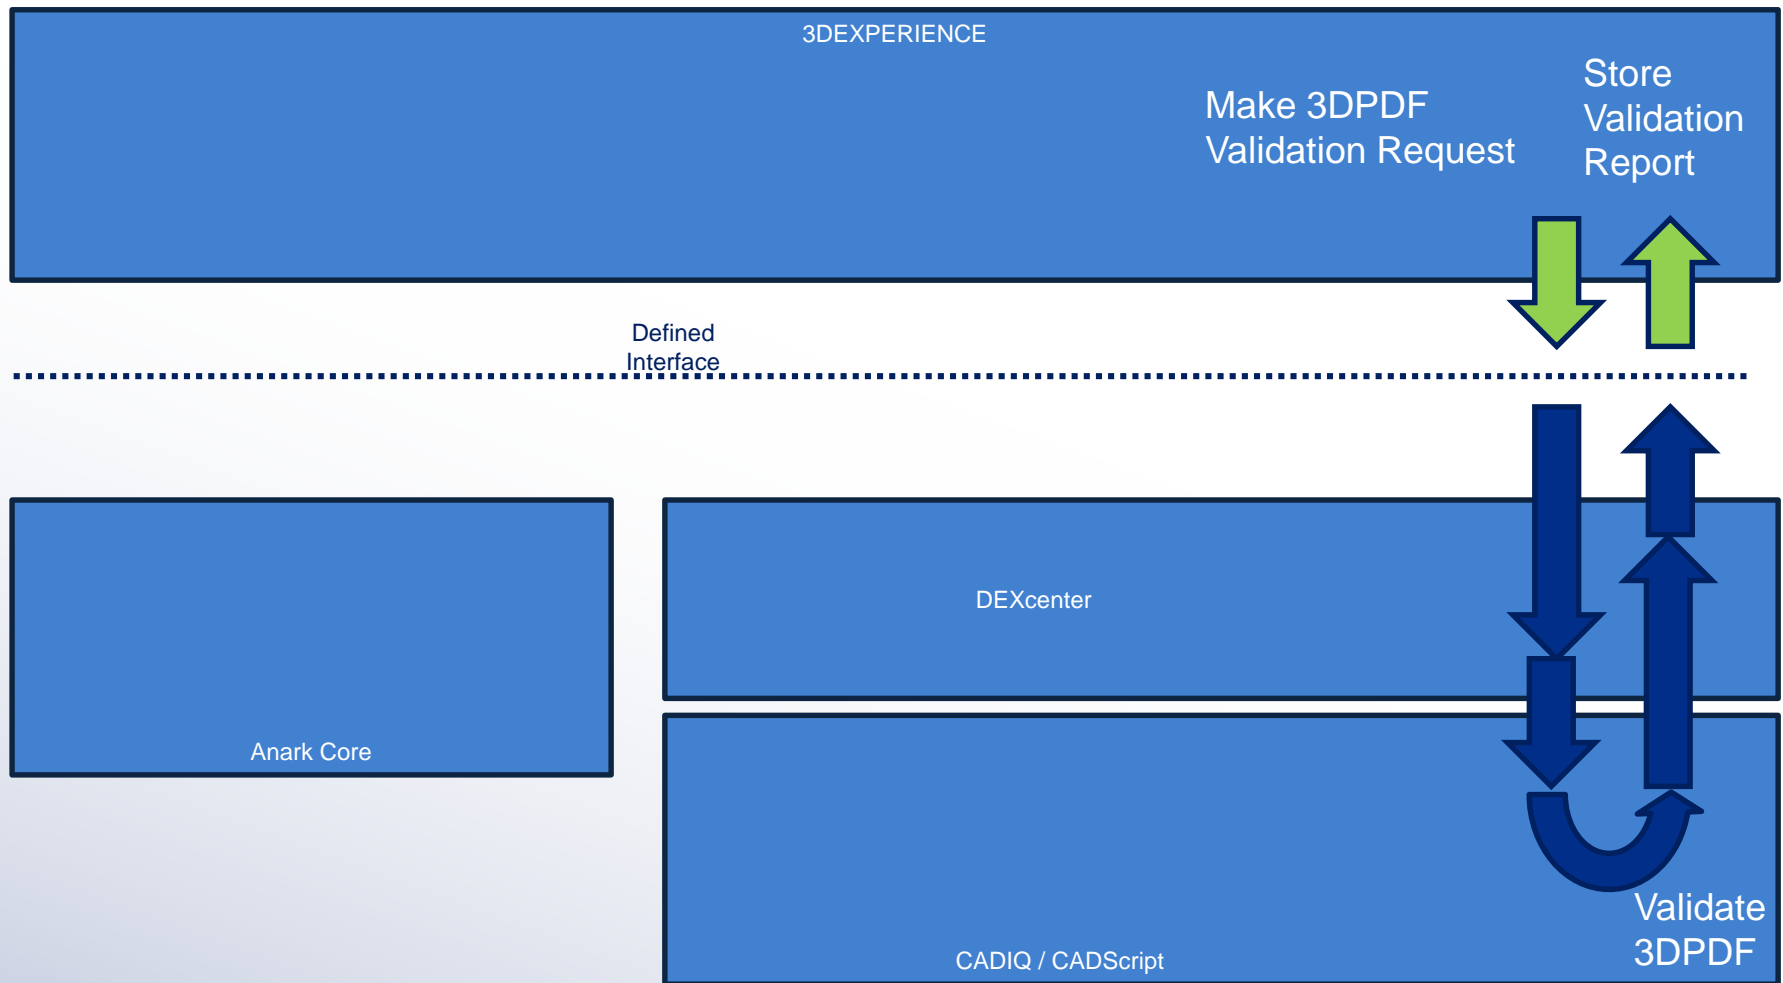

- Generation of STEP AP242 file from native CATIA (AP203 Currently)
- Validation of STEP models relative to native CATIA models
 - Geometry
 - PMI
 - Assembly Structure
 - Model Views

Solution: 3DDE Micro Processes

Solution: 3DDE Micro Processes

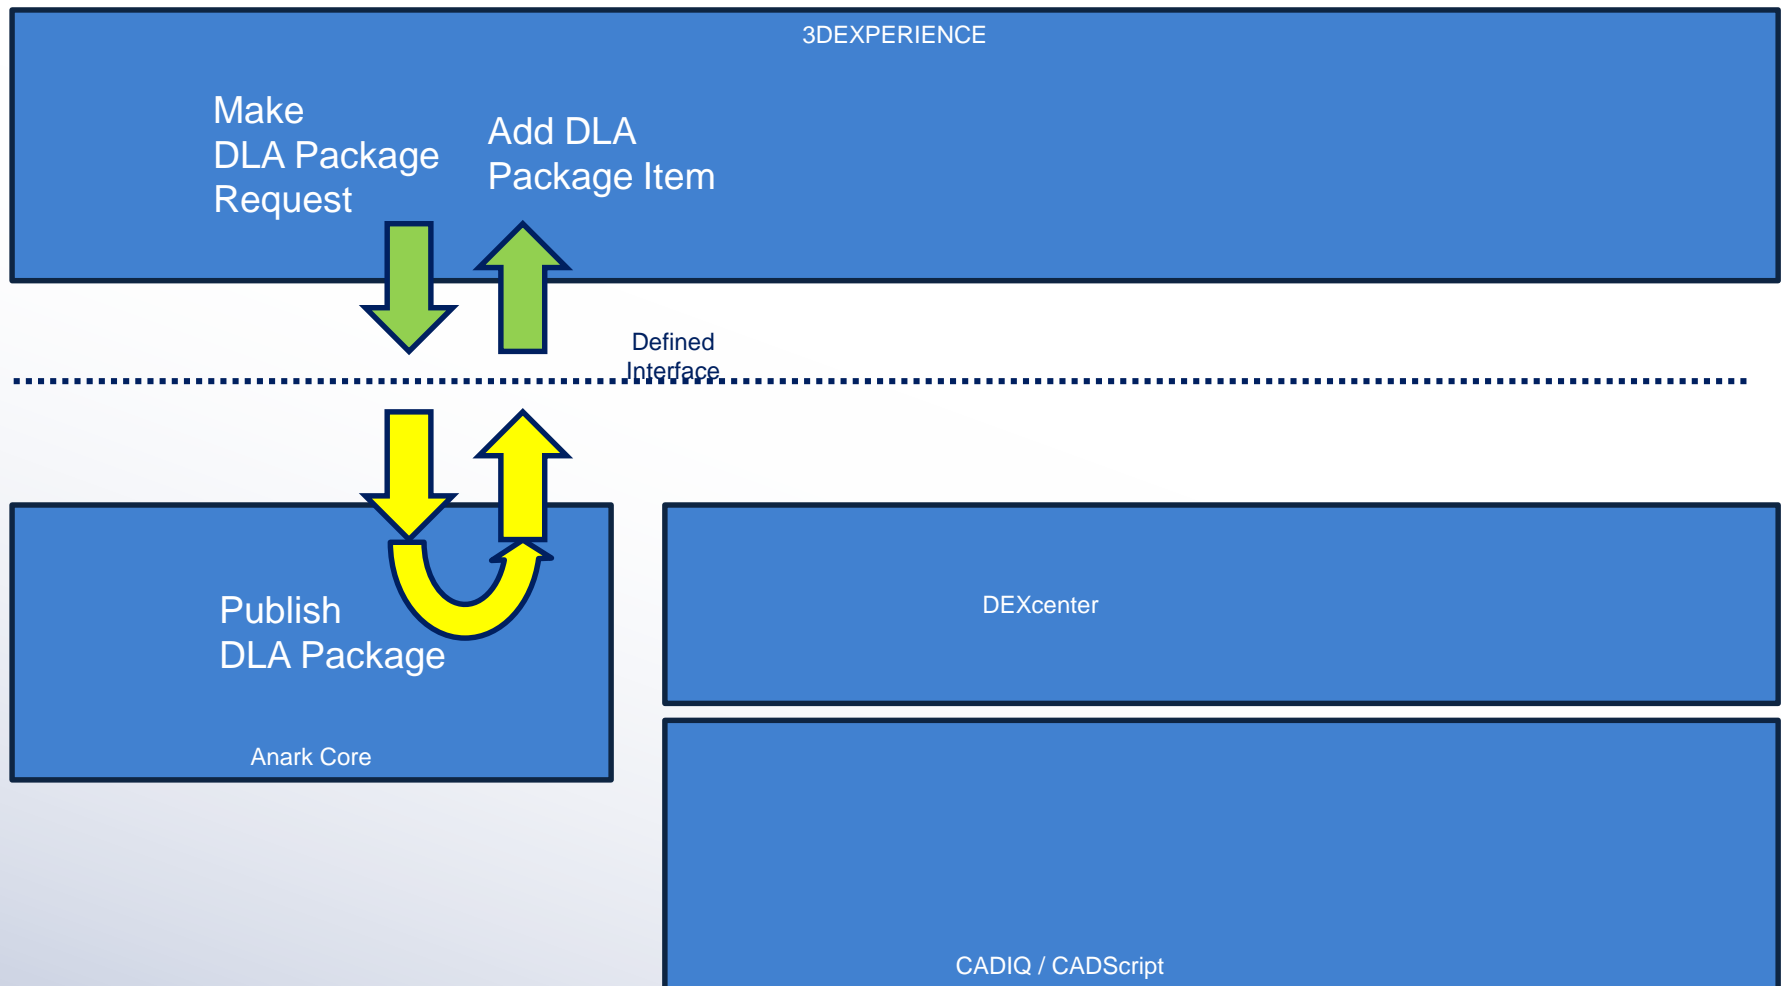

Solution: Anark 3D PDF / Validation

- Validation of 3D PDF documents relative to native CATIA models
 - Geometry
 - PMI
 - Assembly Structure
 - Model Views

Solution: 3DDE Micro Processes

DLA Package = Attaching validated STEP File / adding Approval

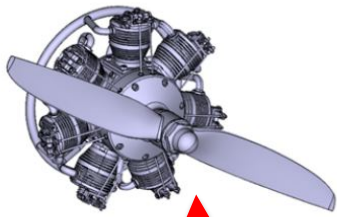

Solution: 3D PDF Document Layout

DISTRIBUTION STATEMENT: DISTRIBUTION UNLIMITED AS THIS IS NOT A REAL PRODUCT WITH REAL DATA			
EXPORT CONTROL: This is not a real model or a product and thus, there is no export controls on any information in this document.			
CRITICALITY STATEMENT: Criticality is a part identified as critical by the design approval holder during the product type validation process, or otherwise by the exporting authority. Typically, such components include parts for which a replacement time, inspection interval, or related procedure is specified in the Airworthiness Limitations section or certification			
DATA RIGHTS: This is not a real model or a product and thus, there are no data rights on any information in this document			
LICENSE AGREEMENT: There is no licensing needed to open this and all 3D PDF documents			
MSC MARKING: No markings have been applied but, automated watermark creation and updating is possible with type of document			
DISTRIBUTION NOTICE: Please do not destruct this document as it is a simple but effective 3D PDF that shows how CATIA V5 and other PLM Metadata is combined into a fit-for-purpose Technical Data Package

BOM

Notes & Statements (Lists appear in Sheets 3 and higher as needed)

The diagram illustrates the automated mapping of CATIA V5 MBD content. It shows a central 'CATIA Product' (represented by a yellow cube) with arrows pointing to various output sheets. The 'BOM Part' sheet (represented by a gear icon) is linked to the 'CATIA Product'. The 'Part/Application Lists' sheet (represented by a document icon) is linked to the 'BOM Part'. The '2D Dwg Field Sheets' (represented by a document icon) are linked to the 'BOM Part'. The 'Text Data Sheets' (represented by a document icon) are linked to the 'BOM Part'. The 'CATIA Part' sheet (represented by a yellow cube) is linked to the 'CATIA Product'. The 'CATIA Part' sheet is linked to the '2D Dwg Field Sheets'. The 'CATIA Part' sheet is linked to the 'Text Data Sheets'.

The 3DDE Solution

Key Points

- **PMA-261**

- Solution available for non-CAD users to consume MBD content

- **Anark**

- Automated generation of validated standards-based 3D-PDF-based MIL-STD-31000 documents and Technical Data Packages (TDPs), with lifecycle-appropriate document markings, is a repeatable process from any PLM system

Key Points

- **ITI**
 - Manipulate data for optimum publishing
 - Provide validated derivative data for trusted content publishing
- **Razorleaf Government Solutions**
 - Develop an architecture for a broad information delivery solution applicable to any PLM or CAD system
 - In a model-based world, 3D PDFs are great “fit-for-purpose” communication tools, but the volume of supporting data has to be managed

Next Steps

- **Groom Pilot Project for Production Deployment PAX Data Center on NMCI**
 - Perform work to prepare for production
 - Deploy into production in Q2 and Q3 of 2018
 - Explore modularizing solution for application to other PLMs and CADs

Conclusions

Global Product Data Interoperability Summit | 2018

- **OEMs may use modern PLM/CAD systems and MBE processes but data structures mismatch with DOD programs may still need to be addressed.**
- **Automation is required - thousands of models cannot be hand verified, organized, and delivered.**
- **Any system must be defined with flexibility to enable micro-processes that can be applied to varying PLM and CAD OEM data and map the data to DOD systems.**
- **DOD programs must automate MIL-STD-31000-based TDP delivery using standards-based formats such as 3D PDF and STEP that are sustainable.**

Thank You

Global Product Data Interoperability Summit | 2018
