# **Sigmatrrix** - Global Experts in GD&T and Mechanical Variation

Global Product Data Interoperability Summit | 2019

- **Over 25 years of Mechanical Variation experience**
- Tolerance Analysis Software Solutions work with CATIA V5-6, Autodesk Inventor NX, PTC Creo, and SOLIDWORKS
  - Analysis models utilize native CAD data files for geometry and PMI
  - OEM provider of 1D stackup and GD&T authoring solutions to PTC Creo and Autodesk Inventor
- Training in ASME GD&T & ISO GPS, Fundamentals of Tolerance Analysis, MBD/MBE, and our software solutions
- Consulting & Integration Services

**Customers worldwide supported either directly in North America or through distributors internationally**

# A few definitions courtesy of Wikipedia with some simplification

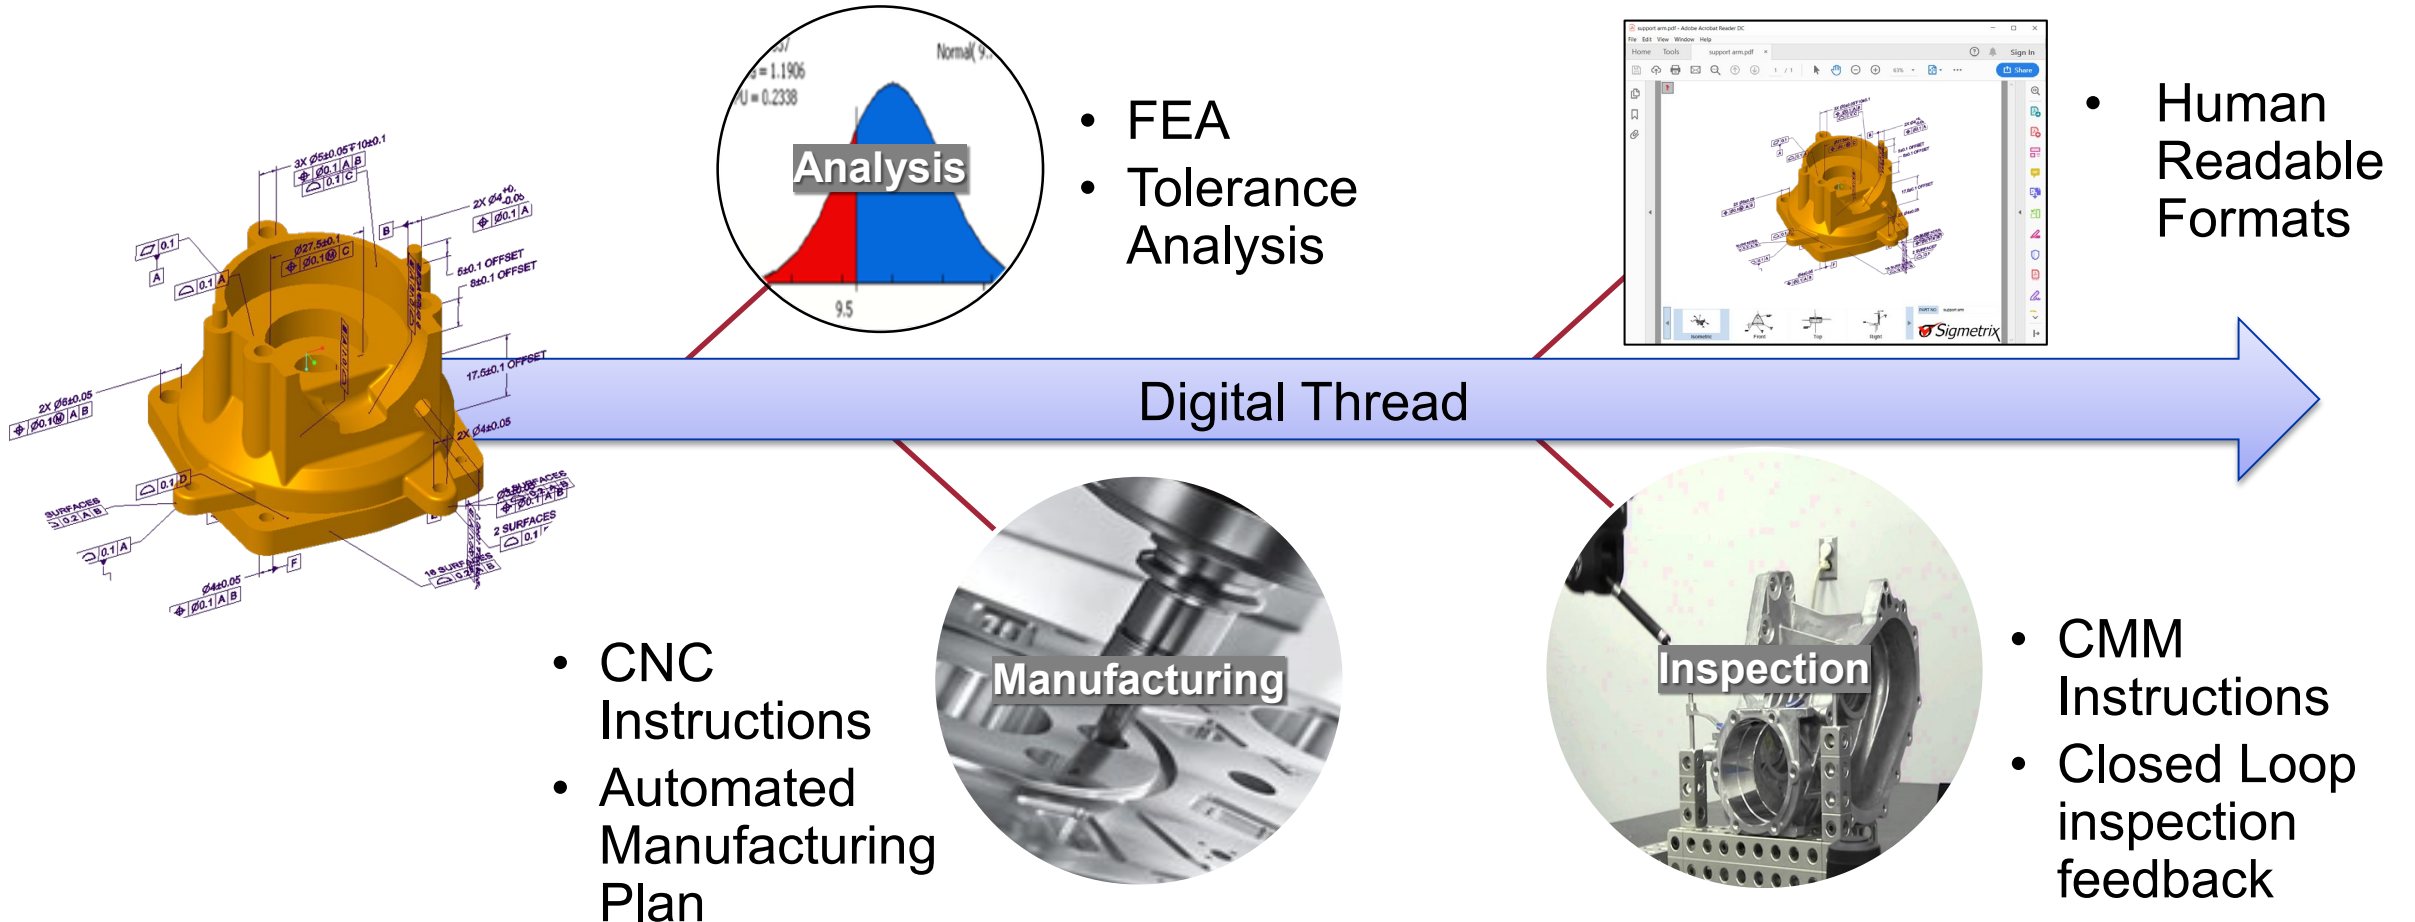

Global Product Data Interoperability Summit | 2019

- **Model-based enterprise (MBE)** is a strategy where an annotated digital three-dimensional (3D) model of a product, instead of drawings, serves as the authoritative information source for all activities in that product's lifecycle. There are two prerequisites to implementing MBE:
  1. Creation of necessarily annotated 3D models, known as a **Model-based Definition**
  2. Transformation of CAD data into forms usable by downstream lifecycle activities (i.e. production)
- **Model-based definition (MBD)** - the practice of using 3D models (such as solid models, **3D PMI**, and associated metadata) to define product. Types of information included are **geometric dimensioning and tolerancing (GD&T)**, component level materials, assembly level bills of materials, engineering configurations, design intent, etc.
- **Product Manufacturing Information (PMI)** - conveys non-geometric attributes in 3D computer-aided design (CAD) and Collaborative Product Development systems necessary for manufacturing product components and assemblies. PMI may include **geometric dimensions and tolerances (GD&T)**, 3D annotation (text) and dimensions, surface finish, and material specifications.

# The flow of information in the MBE

Global Product Data Interoperability Summit | 2019

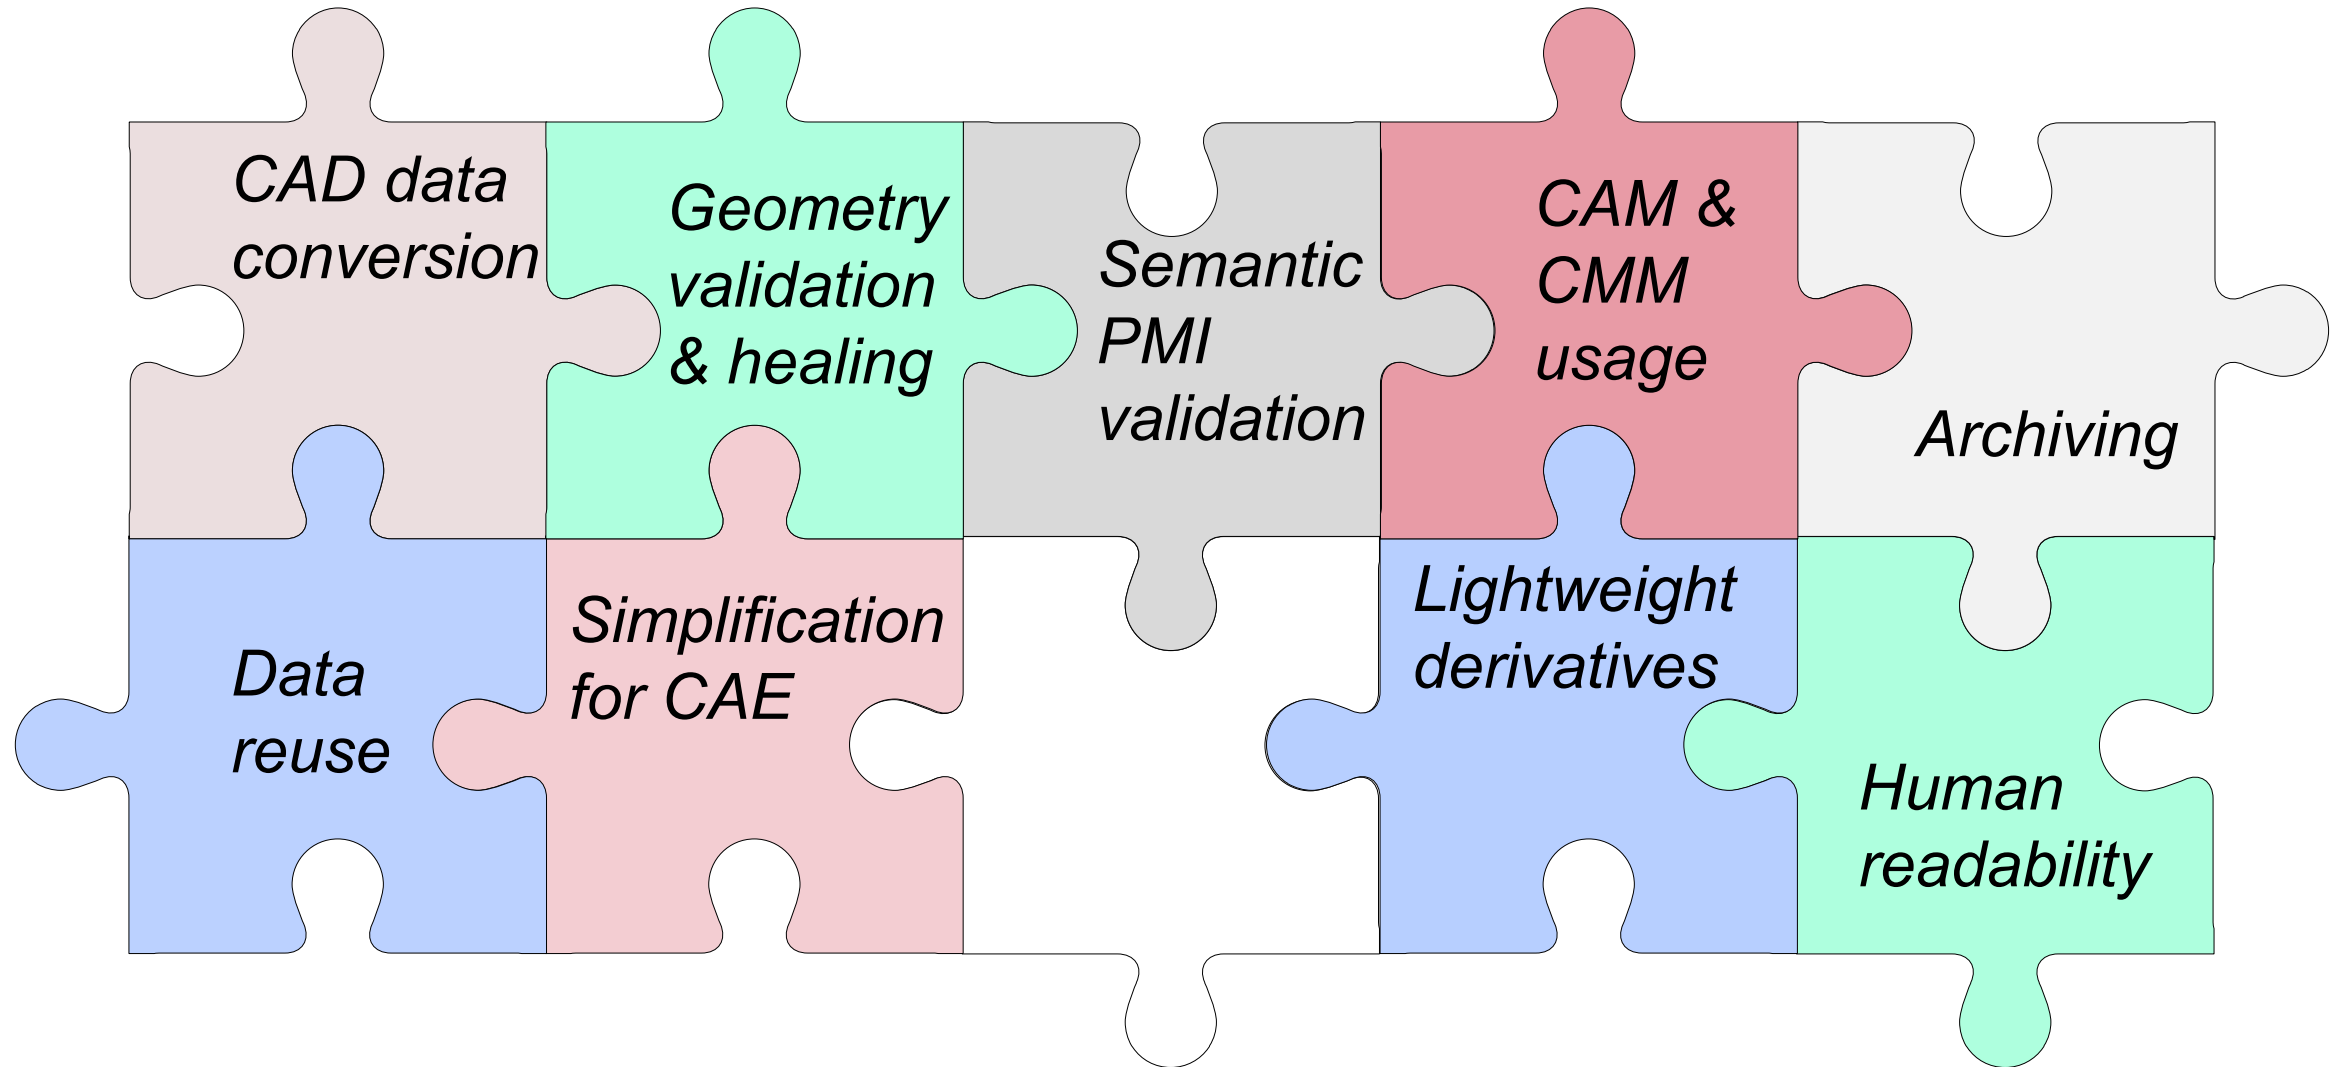

- MBE enables efficient communication throughout the organization

# MBD Concerns addressed by various software solutions

... but how much potential savings go unrealized if the information is wrong?

# Dimensional Management MBD Recommendations

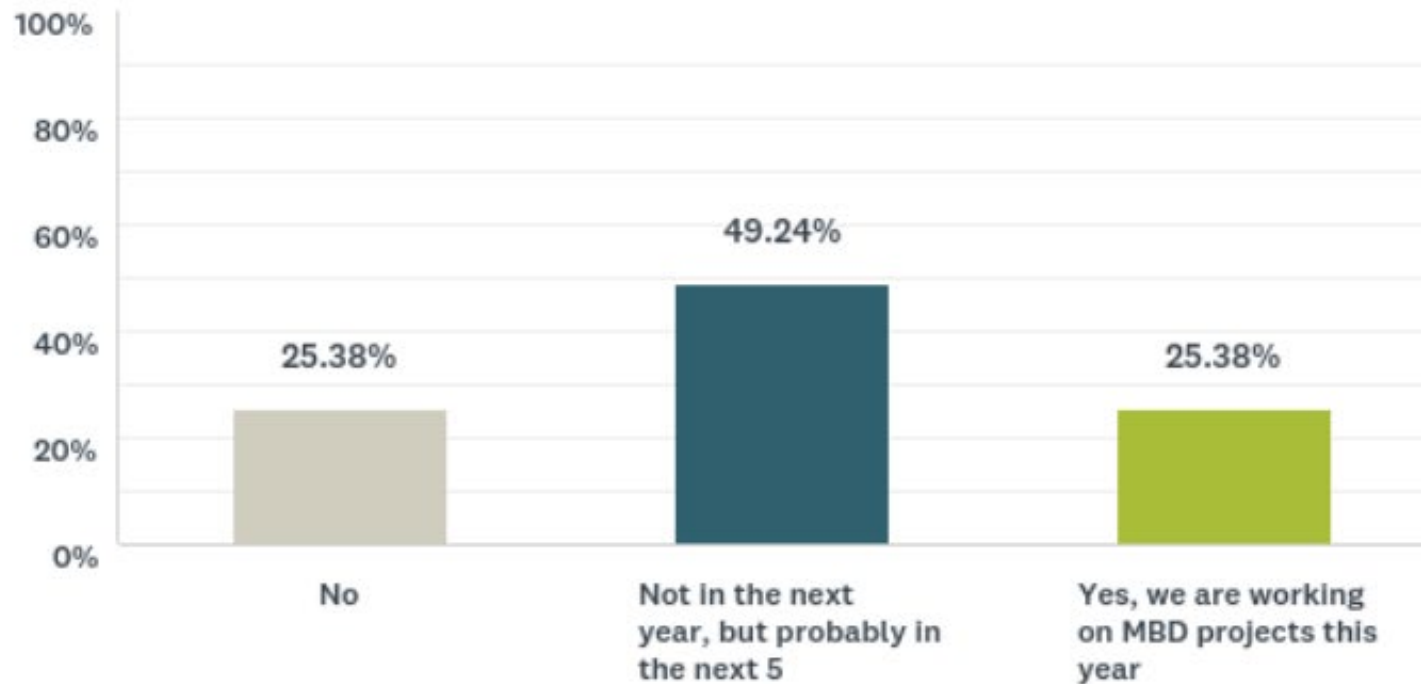

Global Product Data Interoperability Summit | 2019

1. **Use** tolerance analysis to determine what values should be specified in the dimensional annotations.
2. Use **Geometric Tolerances** (GD&T or GPS internationally) to **avoid ambiguity** associated with the more common/traditional dimensioning and tolerancing methods.
3. Ensure the **authors** of GD&T/GPS annotations **know the language** well and have access to tools that help provide “spell-check” and “grammar-check” type of functionality.

# Industry transition to MBD – informal survey results from 376 respondents

Global Product Data Interoperability Summit | 2019

Does your company have any initiatives to move to Model-Based Definitions (where the model is the master instead of the drawing) in the next year? In the next 5?

# The State of Tolerance Analysis

# Which best describes your current tolerance analysis coverage?

Global Product Data Interoperability Summit | 2019

## MBD in next year

## MBD in 2-5 years

# Top reasons cited for investigating tolerances analysis solutions

Global Product Data Interoperability Summit | 2019

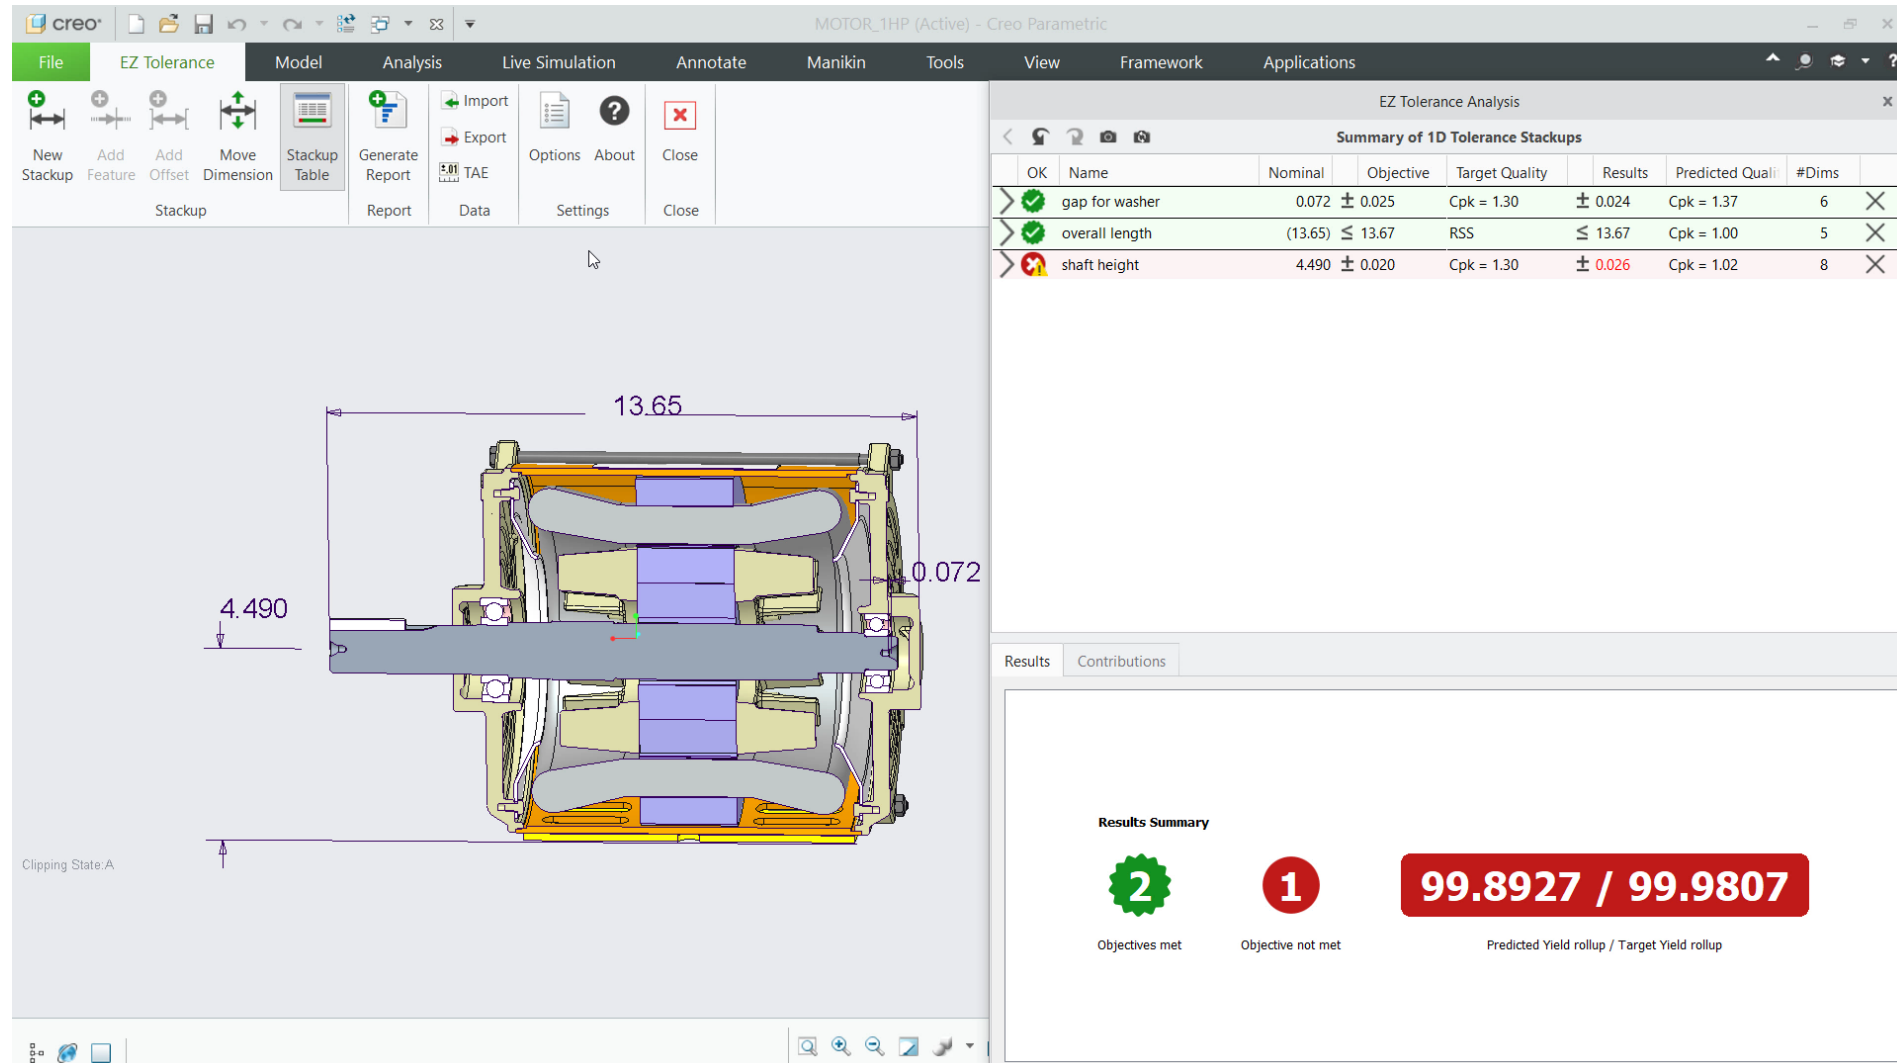

1. Improved efficiency for performing the analysis – **84%**
2. Reduction in manufacturing problems caused by tolerance issues – **76%**
3. Improved integration of analysis tool(s) and data within CAD models – **70%**  
*Note: 80% of respondents use spreadsheets today for their tolerance analysis studies*
4. Improved coverage that we are unable to do today because of cost, schedule, etc. – **34%**
5. Reduction in field problems caused by tolerance issues – **34%**
6. Reduction in time required in pre-production phase – **33%**

# Tolerance analysis solutions are ready for MBD – 2-minute demo

Global Product Data Interoperability Summit | 2019

## 1D Stackup Analysis

- Quickly define multiple stackups on the CAD geometry
- Analyses automatically update when CAD nominal change
- Dashboard provides on overview of all studies
- Quickly generate reports with loop diagrams

# **The Importance of GD&T for MBD**

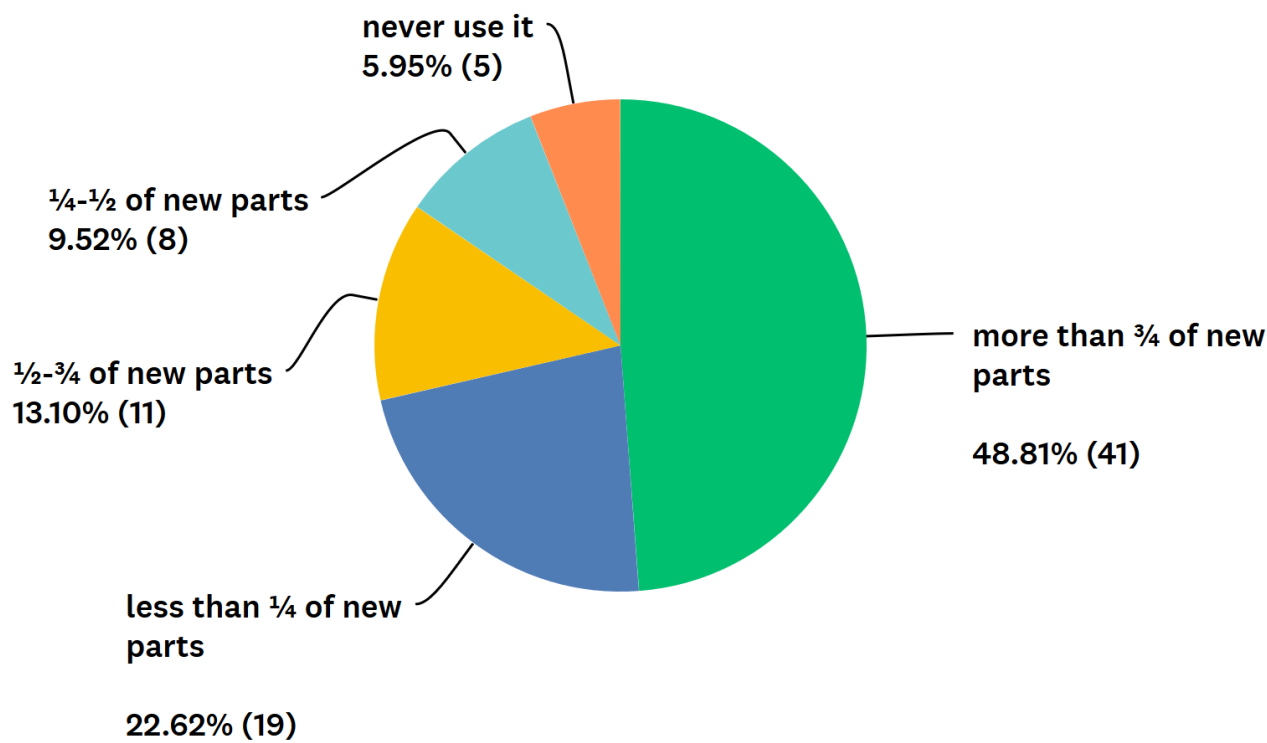

***(Hint: it's not about the bonus tolerances)***

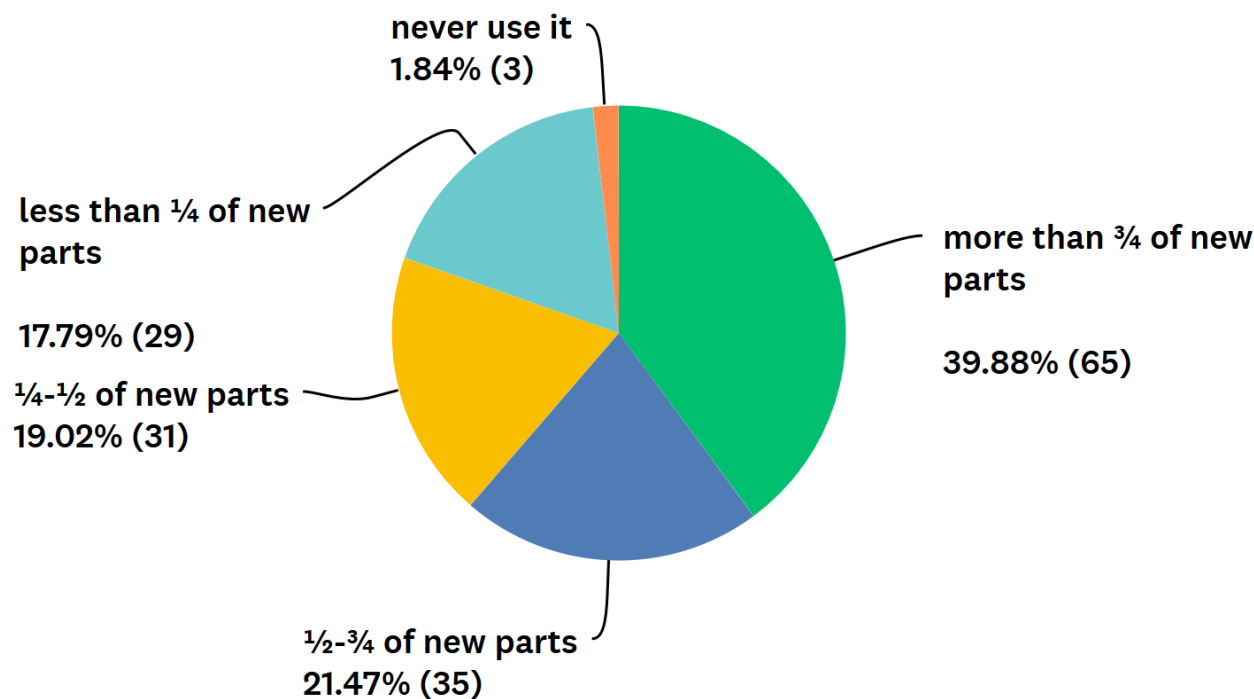

# Which best describes your company's GD&T/GPS usage?

Global Product Data Interoperability Summit | 2019

## MBD in next year

## MBD in 2-5 years

# Dimensions with +/- Tolerance are Ambiguous

Global Product Data Interoperability Summit | 2019

## What do the dimensions on this drawing mean?

# Dimensions with +/- Tolerance are Ambiguous

Global Product Data Interoperability Summit | 2019

Is the hole being controlled to the sides?

Are the sides being controlled to the hole?

# “Real-world” variation adds additional complexity

Global Product Data Interoperability Summit | 2019

## How does inspection determine the measurement direction on the actual parts?

or

# “Real-world” variation adds additional complexity

Global Product Data Interoperability Summit | 2019

## How does inspection determine the measurement origin on the actual parts?

# GD&T removes ambiguity

Global Product Data Interoperability Summit | 2019

- The hole is being controlled relative to a coordinate system defined by three datum features labeled A, B, and C. This is DRF A|B|C.
- The axis of the hole must fall within a cylindrical tolerances zone having a diameter of 2.8 mm and located 25 mm from both datums B and C as defined by DRF A|B|C

# GD&T is a language

Global Product Data Interoperability Summit | 2019

- To “speak” it properly requires:
  - Education
  - Application
  - Practice
- For authors, don’t feel obligated to use all things covered in the standards. A subset of the standard will carry you far.
- Like any language, no two people will speak it identically.
  - It is possible to converge on similar definitions with standard processes.

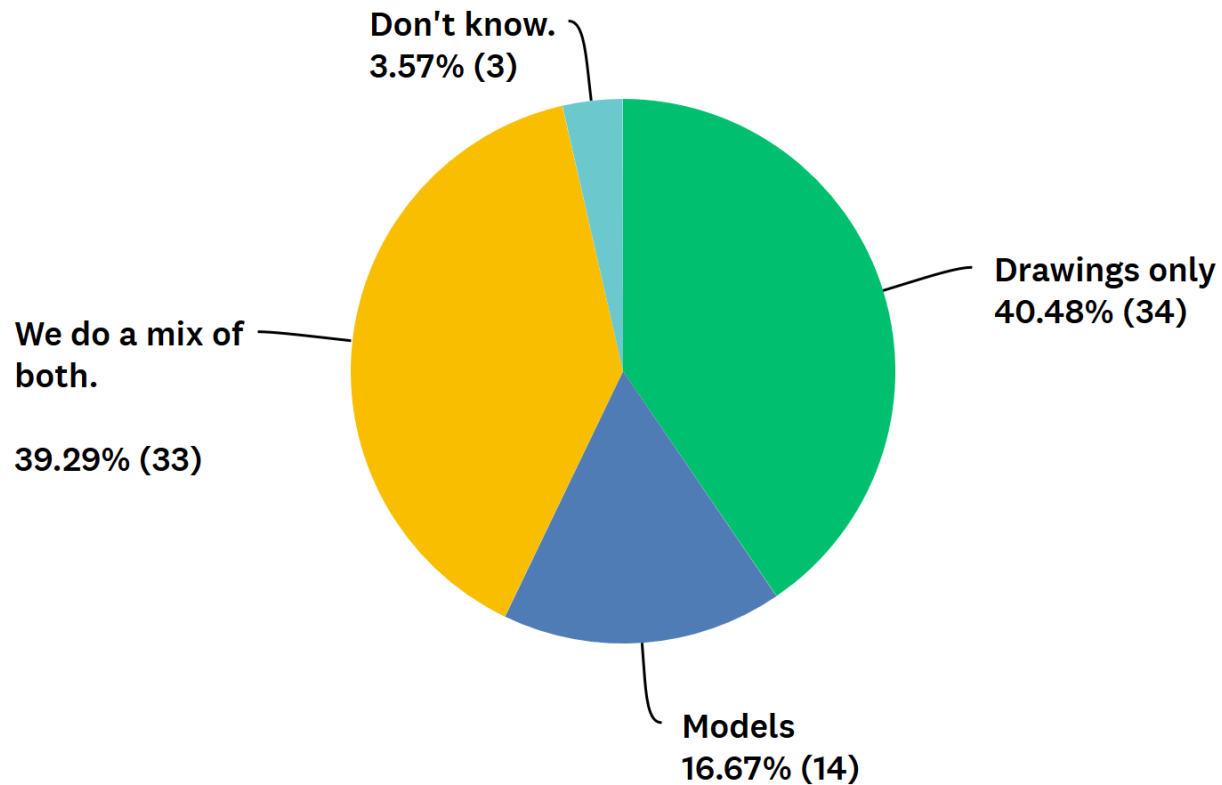

# The State of GD&T Authoring

# Where are tolerances first defined?

Global Product Data Interoperability Summit | 2019

## MBD in next year

## MBD in 2-5 years

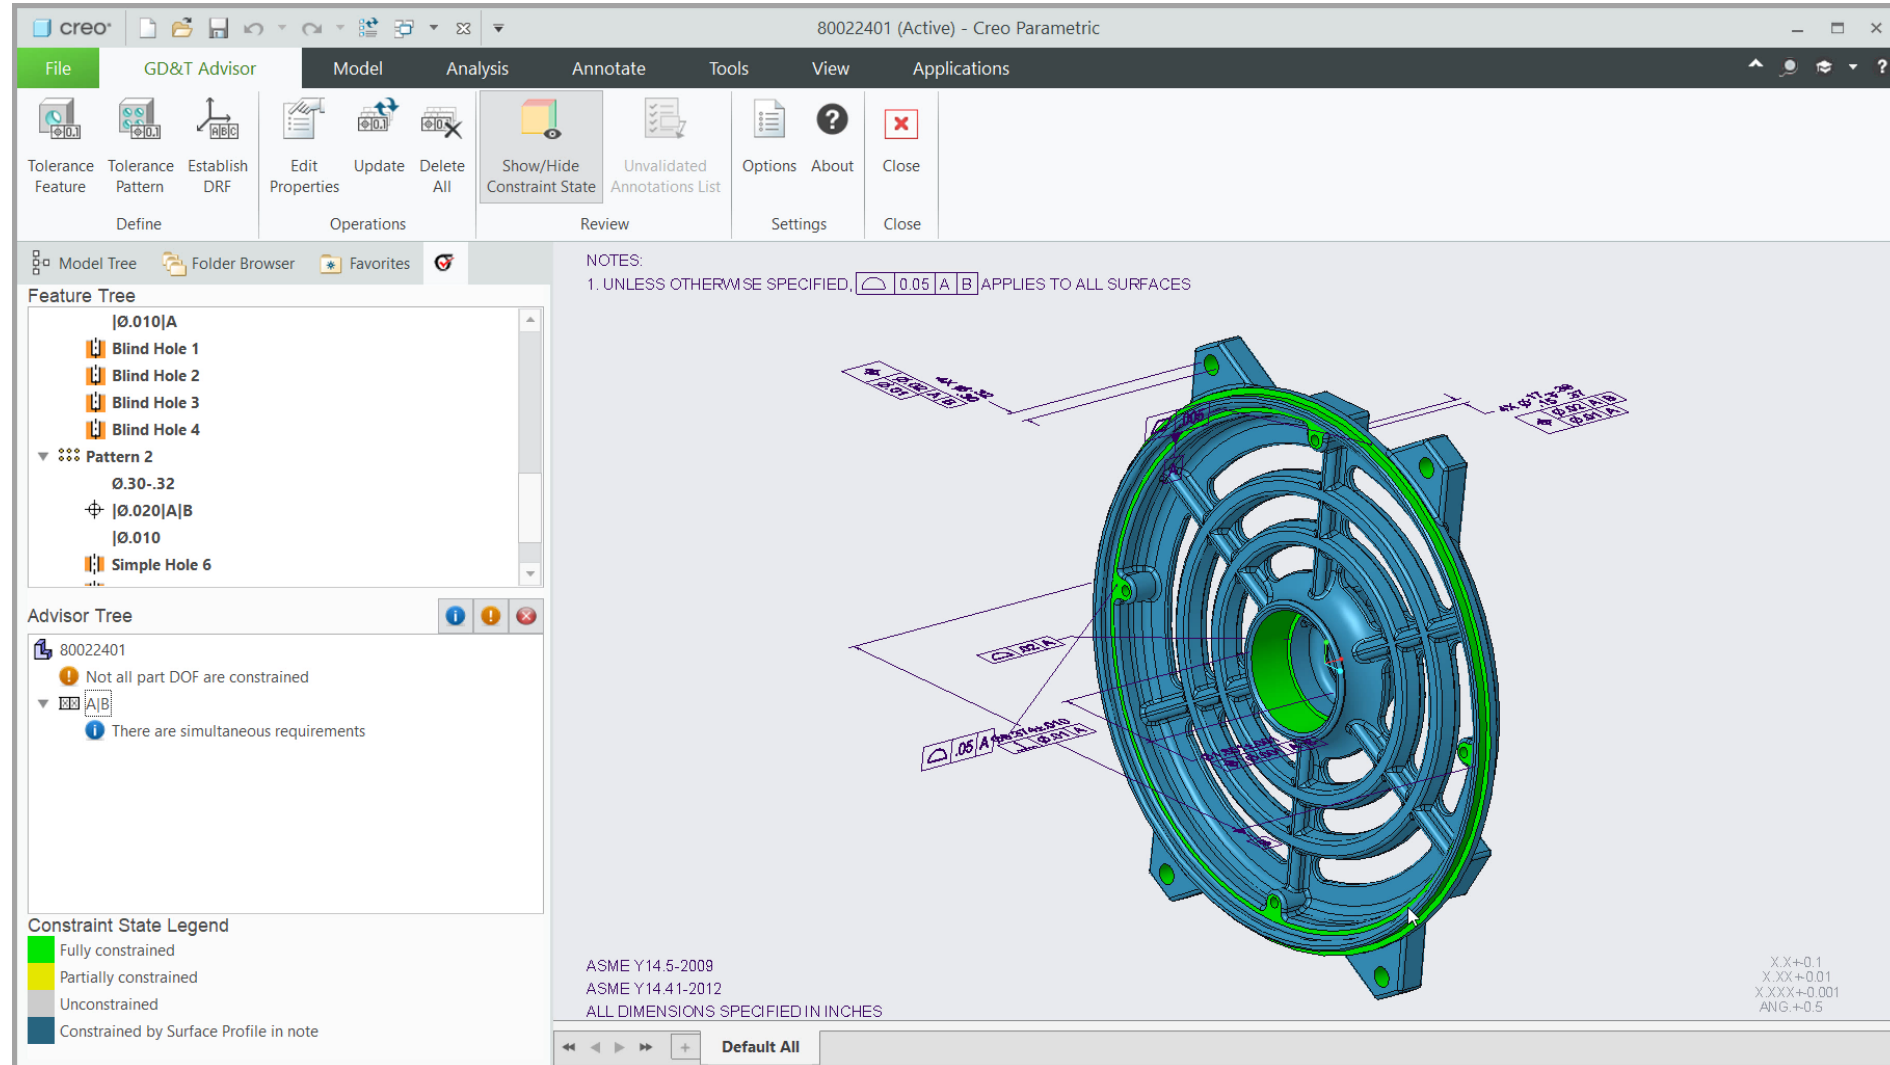

# GD&T Authoring tools help with the definition - demo

Global Product Data Interoperability Summit | 2019

## GD&T Advisor

- Quickly add semantic GD&T
- GD&T applied per governing ASME or ISO standards
- Recommendations made to help provide consistency
- Visual feedback about status of control of each surface

# Dimensional Management MBD Recommendations

Global Product Data Interoperability Summit | 2019

1. **Use** tolerance analysis to determine what values should be used in the dimensional annotations.
2. Use Geometric Tolerances (GD&T or GPS internationally) to **avoid ambiguity** associated with the more common/traditional dimensioning and tolerancing methods.
3. Ensure the **authors** of GD&T/GPS annotations **know the language** well and have access to tools that help provide “spell-check” and “grammar-check” type of functionality.
